Whenever the FCC decides it's necessary. I'll be ready. I've always made it a
point to be able to pass the current license exams for the licenses I hold.
>
>> >Dick believes he'll

Check out qrz.com

It's probably true that W0EX has more experience, and more recent experience,
on the amateur bands than you do. In other words, he's probably more current
than you.

Got that antenna up yet?

Yes, the price of cake went up becuse of the demand, the bread
company had no sales and after declaring Chap. 11 came out of
it as the largest croissant supplier in all of France....

The Free Market system at work....

>Okay... heres a challenge. Name these "good things." Be specific and
>please do not generalize.

1. Serves as a single point of contact to and from the Commission staff in pre-NPRM negotiations (yes, these do exist). The League has caused several undesirable items to be "dumped" before they saw the light of day. Some folks may not like what the League has done or not done, but it is a safe bet that without a "League" amateur radio would be a lot worse off today.

2. The QSL Bureau is a League function - I'm not a QSL or DX chaser so I don't use the Bureau myself but a lot of others do.

3. The League provides some high-powered legal assistance to members through the Volunteer Counsel program. Most if not all of the ham radio cases that the courts have decided came about by the efforts of VCs whose normal "open market" fees were waived by the VC and in some cases the League itself provided monetary support to cover court costs and expert witness fees.

4. Pressure from the League pushed through the original PRB-1 assertion of preemption over local governmental actions which unreasonably restrict ham radio installations as well as its clarification to the benefit of licensees. State and local ARRL affiliated groups have pushed through the same on a state and local level. The League is the entity carrying the ball in getting The Congress to finally assert preemption over private contracts which unreasonably restrict ham radio installations. Some may not feel that these things are important - I feel that they are to the point that I put my professional skills to work in that arena.

4. Unnoticed except for those who are affected, the League got the FCC to assert preemption over state and local anti-scanner laws which require permits for or outright banned receiving capability on "police banda" which are integral parts of amateur mobile transceivers. This has resulted in most states having those requirements declaring that licensed amateurs are exempt from any such restriction except when the equipment is used for an unlawful purpose. There's a lot of "little things" like this that the League does that aren't front page news. Again, some may not feel that these things are important - I feel that they are to the point that I put my professional skills to work in that arena.

>Maybe your might be the first person to actually convince me to join.

I'm not a salesman. If you want to join, do so. If not,
you'll still be a free-loader.

Gee, that's strange. Both my present and former Division Director
(my representative on the BoD) do not feel that way, and neither do
most of the League members whom I know, Allowing Morse to be used, yes.
Required Morse test, not really.

Maybe I move in good ham circles.

Oh BTW - how does YOUR Division Director stand?

Phil, they say if you're gonna tell a lie, to make it a whopper! Either
that or their core beliefs blow in the wind. I wonder which way the wind is
blowing?

> Maybe I move in good ham circles.

So now you are saying that folks who don't necessarily support a
Morse/Farnsworth exam are moving in good ham circles?

My, my, how times have changed in two short years.

Next thing you know, we'll learn that the ARRL supported the no-code license
in the 1970's.

There have been some interesting callsigns used over the years. One of
the most interesting was Ernst Krenkel's "RAEM". He was a polar
explorer and radio pioneer who orchestrated the dramatic rescue of 104
crewmwmbers of a doomed icebreaker in the Arctic Ocean. He was also
the north end of the then HF distance record when he worked Admiral
Byrd's expedition in the Antarctic from near the North Pole. Plus he
pulled off other amazing feats in very cold places. Russian hams
consider him their equivalent to our Hiram Percy Maxim. I heard the
guy only once. 20 cw, he was loud and was using a straight key but I
couldn't get him to come back to me. "Selective ears" . . he had a
really slick QSL card with a salon photo of himself on it which is a
real collectible. He went SK in the early 70s.
>
Another one you might hear on the airband is "November One". It's the
nominal flagship of the FAA inhouse fleet. It's an old low slow DC-3
which is used to survey FAA navaids mostly around the major airports.
It's also the FAA's showbird. I first saw it at the EAA show in
Lakeland FL around 1993. The FAA guys cheefully invited anybody who
expressed an interest in it to climb aboard and take the five-minute
guided tour. There was nothing special about it, it wasn't spitshined
at all, it was just an old workhorse moderatly filled with electronics
gear. But it did have the ultimate U.S. side number and callsign.
>
Then comes "JY1" . . . zero WPM for the whole enchilada . .

>
w3rv: cost = 0
>
I had no idea exactly what callsign the FCC would hang on me until the
new license arrived. Ya tossed a short list of 1x2 callsigns ya could
live with and they did the picking outta yer list.

Sounds like a Plan! :-)

Of course, one could go as far as TGI Friday does on credit.
TGI Friday will only accept credit from "those above 85 years
accompanied by their parents." :-)

Beep, beep.

I don't have a "division director." I have the FCC, not some quasi-
government membership organization standing between me and
my government...or trying to interpose itself as "my elected
representative" in anything.

ARRL has postioned itself as the go-between as well as being
a special interest group lobbying the FCC on amateur radio
matters for decades. Until recently they had steadfast
opinions on the retention of the code test for under-30-MHz
license classes. You cannot deny this. Recently they took a
null position on the code test once the IARU had made its own
influence known on the US WRC-3 preliminary views on 1.7.1.

Maybe you are just moving in circles, counselor.

If you had no written permission to operate, it would seem that you had
no valid authorization (and you've confirmed that you never had written
permission to get on the air). Your operation would not be accepted for
DXCC.
I'll bet those you QSO'd were tickled pink with your worthless QSL card.

Maybe you'll now be known as "Mogadishu Slim".

I'm sure the gang would have been quite happy to work a legitimate op
from Somalia using SSB. They didn't find one in you. I don't know of
any award program which sanctions operations from those not holding a
valid license in the country of operation. You didn't have one but some
guy told you that it was okay to operate. Imagine no one accepting your
word that it was okay!

You don't have a division director because you aren't a ham and you
aren't a member of the ARRL. You don't "have" the FCC because you
aren't a ham.

> ARRL has postioned itself as the go-between as well as being

You obviously have no knowledge of the relationship between the ARRL and
the IARU. There would be no IARU without the ARRL.

> Maybe you are just moving in circles, counselor.

...beats not moving at all. Got that Extra out of the box yet?

The roles/responsibilities of field organization folks
covers other areas than recruitment. We are, however,
there to be tapped as a resource when needed...we are not
all in a position to devote the type of time as you seem
to expect or require.

You also do NOT have a station license to operrate ANY radio transmitter,
nor do you have an operator's license IN the Amateur Service, ergo it's moot as
to whom "represents" you, Your Putziness.

>ARRL has postioned itself as the go-between as well as being
> a special interest group lobbying the FCC on amateur radio
> matters for decades.

No....AMATEURS "positioned" ARRL in that role, Lennie. Persons who were
practiced in Amateur Radio pre-regulation, and later licensed in the Amateur
service.

Unlike yourself.

>Maybe you are just moving in circles, counselor.

As opposed to chasing your tail, such as yourself, Lennie?

Putz.

>Sorry, but I disagree based on years of seeing the first of the
> message exchanges on the ARPANET, then USENET before
> the Internet was open to the public.

This is cute. His Scumminess, well known for disparging Amateurs for
allegedly "living in the past", asserting that his "expertness" is based upon
his experiences "in the past".

Does the term "two faced" ring a bell, anyone?

>There is always a group which has preconceived ideas of "right"
> and "wrong," mainly that their personal viewpoints are the only
> ones "right" and any opposition is "wrong." They tend to come
> unglued quickly and resort to the primitive.

Kinda like your application of the terms "jackbooted thug", "elitist",
"Nazi", etc when someone doesn't tow YOUR line, Lennie?

>In here there is a group of regulars who are devout believers of
> ARRL, that the League can do no wrong.

I would "demand" that you provide a single, valid quote of ANYONE in this
NG who has espoused such unwavering beliefs, but you are already reknowned for
your lack of facts and even more reknowned for your swipe and duck tactics,
ergo this is already dismissed as foolish and unfounded.

A weak attempt by an uninformed putz.

>Questioning anything of ARRL output is automatically
> a sentence of heaped abuse on anyone daring to say anything
> negative against the League.

Oh? Both former members of the field organization and present employees
of the ARRL ahve made assertions which clearly make your assertion foolhearty,
at best...

>That isn't intellectualism, it's just
> cultism and the adoption of amateur radio as some sort of life-
> style. That kills "discussion" right there.

WE (those who are licensed and active in the Amateur radio Service) have
much to discuss, and do so regularly.

YOU are the one with nothing to discuss, Lennie. Only blatant lies, mistruths, and colorful fictional scenarios presented with the intent to confuse or otherwise mislead those who don't know any beter.

Shame on you, Mr Professional Engineer. (yeah...right...)

>Quite often this newsgroup
> turns into an "us against them" non-debate with name-calling,
> taunting, and outright insults at anyone daring to say the least little
> negativism to their sacred viewpoints.

Not in the least. If you have something constructive or critical to say, say it.

YOU on the otherhand are only vile, deceptive and vengeful.

>This happens in other news-
> groups concerning different subject matter, is a part of the newsgroup
> environment that will not change.

It will not "change" as long as people who have no vested interest and informed opinion insist on forcing themselves on people who know better...Kinda like you, Lennie. YOU are the very epitome of the online antagonist...the "corporate know-it-all" who insists that they and they alone have enlightenment.

>Any open public-access forum is bound to have discord from time
> to time. It's the environment of computer-modem communications
> and the time-delayed interfacing of human beings. It's been that
> way since ARPANET on through BBSs and BBS nets to USENET.

Lennie to English translation: As long as I can get on here and do what I want with impunity, I will harass anyone I care to.

And he does. The Ultimate Putziness.

>In a way, it is strong Darwinism in full force. The strong, or rather
> those that are acquainted with the environment, will survive.

Lennie's way of considering himself to be immortal.

> weak may adopt bombast and childish activity or just quit access.
> Most who can't take the environment will quit.

In other words, if you can't stand the aggressively malodorus bile spewed upon you by lying ctreeps like Lennie...tough.

Bully to the end.

> long.

Moderated groups scare the hell out of liars and antagonists like Leonard H. Anderson. It would REALLY spell the end of his reign as King of the News Group Dungheap.

>Been there, done that, have recycled lots of T-shirts.

No doubt from drooled pablum or used as diapers while glued to his seat in an attempt to spin the ultimate "gotcha" in Amateur Radio newsgroups.

>What makes you think your own words are still civil? As you go on
> in this message, you are sounding somewhat uncivil.

And as opposed to YOUR tone of voice in EVERY post, Lennie, this is different HOW?????

>Not hardly. I have a better sense of the unseen readers than most
> of this newsgroup's inhabitants.

Now Lennie is the mind reader! Tell us Lennie, tell us ALL ABOUT the Silent Majority, teeming and just waiting to take up arms in your ranks of the unwashed masses!

ROTMFFLMMFAO ! ! ! ! ! ! ! ! ! ! !

THE ULTIMATE PUTZ IS NOW A MIND READER!

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! !

>If I am "supposed" to endure a series of personal insults and yet
> be gentlemanly, then you have a strange way of requesting it.
>
> The only result of such acquiesence is usually taken for a
> weakness, timidity. It doesn't convince the one who is doing
> the personal insulting.

Then you understand why I refuse to kowtow to your personal version of hatred, lies and distortions of truth, Lennie. Good. You now have NO reason to dismiss any of my assertions about you anymore.

>It lets them take out their daily frustrations on someone
> unknown to them except for words on a screen.

Much like your unyielding railings against Amateur Radio and Amateur Radio operators, Lennie? Is that all we are to you? A whipping post for your personal frustrations and failings? It sure appears that way.

>In a strange way, that may be beneficial to the insulter, directing
> their anger to some object.

Oooops...Guess I was right.

>On the other hand, it can get out of hand
> as witness one pointless little diatribe done on an AOL homepage.
> [short-lived, but rather vicious]

Not as vicious as the assertions of "professionalism" by one self-proclaimed electronics "expert" who can't sned the right file in e mail, huh Lennie? Mine was direct, honest and to the point.

You simply lied. No problem. We've come to expect it. And you don't let us down.

>What you don't recognize is that there are a great number of
> readers out there who never post anything in public. They are
> influenced by different viewpoints and may start to think and
> take action. That's fine by me regardless of their conclusions.

A corrollary to your "Rear Area Widget Claiming Hero By Association Status", Lennie? First you hide behind the mortal sacrifices of soldiers who died three years before you were even in the service, now you are claiming that the silent majority will rally to your cause and carry your opinions as some sort of rallying chant...???

BBBWWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHA ! ! ! !

WHAT A RIP!

>I've heard 44 years of the "evils" of CB from code-loving long-
> timers who have to have federal licenses for everything. It is
> nothing new. Please try something original.

The truth, coming from "lenover21" would be original, Lennie. Try it some day!

>It doesn't "put me" in any sort of "league."

Thankfully, Lennie, we can safely say you ARE in a league of your own. A Putz of One.

>They will
> immediately launch some diatribe of their own saying that
> I am "mistaken," "wrong," or just plain undesireable.

Usually all three. But you forgot "lying", which is your most frequent vice.

How can one man be so ugly as a person, Lennie?

Sucks to be you, I guess.

First you'd have to find one, then restore it. The matching HG-10 is a plus, too. With declining sunspots, it's a good idea to convert the 15 meter bandswitch position to 20 meters.

>at this point.

'zactly. I'm all for a return to secret tests given by FCC examiners, but I
don't see that happening anytime soon, or even anytime at all. We've had the
VEC/QPC system for almost 20 years now, and the FCC is obviously satisfied that
it does the job adequately enough. Whether that's true or not, how can anyone
convince FCC different?

anyone
> convince FCC different?

The ability to convince the FCC of any testing position involves
first defining the issue and then attempting to apply
reality as to current results, etc.

You stated: "We've had the
VEC/QPC system for almost 20 years now, and the FCC is
obviously satisfied that it does the job adequately enough."

I believe that is true, but the first question is to us...Do WE
believe the VEC system has satisfactorily done the job?
I do, you may not. Let's answer that first.

You then said: "Whether that's true or not, how can anyone
convince FCC different?"

If we believe
the system is adequate (not withstanding making some
changes as to test questions, etc.) then there's no need to
try and convince the FCC of anything. If we think the
VEC tesing should be ended or changed to the extent
that the change requires FCC action, then we need to identify
WHY and HOW...and then convince the FCC.

I believe the VEC system has accomplished the same
goals as when the FCC did it. Is it perfect? No, but
abuses and or shortcomings appear to be minimal at
worst. I think there's room for test question
imrovement within the context of the VEC process
today (e.g. more variables in formula questions).

What's your viewpoint?

Cheers,
Bill K2UNK

Certainly I'm legitimate. Why do you say I'm not? I asked permission,
permission was granted. I operated.

I don't know of
> any award program which sanctions operations from those not holding a
> valid license in the country of operation.

There is no government in Somalia, thus there are no valid Somalia licenses,
unless you want to consider some UN issued licenses Somalian. You must
accept the fact that Somalia is a paradox. I operated legally, yet I have
not provided the ARRL's DXCC desk with anything.

Are you still of the opinion that I took advantage of a poor country and
bootlegged a call?

You didn't have one but some

Dave, you're almost a funny guy. Was your military commander in combat zone Vietnam just "some guy?" I'd think he was a little more influential over your activities than some khat selling technical at the K4 traffic circle.

You want to compete with channel 2 TV in Detroit with their 250 KW
transmitter go right a head. But I'll bet nobody will even notice
you're on the air.

Leland...

I'm hardly arguing for "freeband" anything. However, from a technical point of view, that 250kW is spread over 4.5 MHz. If you choose a narrowband chunk of that channel, and depending on how far you and the other guy are from the transmitter itself (square of the distance, remember?) you can very easily compete.

Jim

"Leland C. Scott" <no-spam@junk-mail.net>
shared these priceless pearls of wisdom:

->You want to compete with channel 2 TV in Detroit with their 250 KW
->transmitter go right a head. But I'll bet nobody will even notice
->you're on the air.

>which is used to survey FAA navaids mostly around the major airports.

Piloted, in the 60s and 70s, by someone we called "Vertical John".
When we got an interference complaint from the FAA Regional Office,
and tracked down and shut off the unshield 27 MHz heat sealer
throwing off harmonics into the navaid bands, the plane would
overfly the site to verify that the IX was gone and recertify the
navaid.

In the late 60s he would invite the FCC engineers who worked that
case to accompany him (the FAA Regional Electronics Branch Chief was
a former FCC field engineer who delighted in ramming it down our
throats that they had more expensive gadgets than we did) but after
a few rides we found out why he was called "Vertical John" and
politely demurred on the offers.

Yes, the DC-3 CAN be flown like an F-102 in the proper hands.....

>But it did have the ultimate U.S. side number and callsign.

As I found out in am inquiry a while back, the "N' number" is NOT
a call sign. The FCC Rules and other similar regs pertaining to US
government operations provide that the FAA Registration Number
("tail number") may be used IN LIEU of a five-letter aircraft call
sign.

Other alternatives are the carrier name and flight number for
air carrier a/c and the Federal agency/service name and assigned
number (such as Navy 369). For reference purposes these alternatives
are deliniated in Part 87 of the FCC Rules.

As long as they stay down there on 28015 khz and keep away from 28015
mhz, everything should be ok. Dunno how they're gonna get those CB's
down that low in frequency, though.

>> Here is the entire letter content:
>
> Nice cut and paste. Also proves Hans' point.

Brakob's point is NOT made, was NOT made before, even if another
"defends" him.

The actual point was that the FCC defended an individual licensed
radio amateur from becoming a victim of a local power utility.

That should be a very obvious Good Thing for amateur radio in
general. Many don't care to see it that way but prefer to use a
part of that communication for their own personal ends in some
pointless message word war.

>>The word "service" used throughout Title 47 CFR is a regulatory
>> term denoting a type and kind of radio transmitting activity.
>
> That's YOUR interpretation. The FCC see's it differently.

No. It is the definition as used by the FCC.

You may consult Part 1, Title 47 CFR, for confirmation.

Among some other radio SERVICES regulated by the FCC are:

Citizens Band Radio SERVICE,
Radio Control Radio SERVICE,
Experimental Radio SERVICE,
Cellular Radiotelephone SERVICE,
Public Mobile SERVICES

[word service made in capitals to emphasize use]

> It IS a noble venture. The SELFLESS devotion of thousands of volunteers
>who routinely give of themselves for the SERVICE of others is well documented
>and a matter of American history.

What is "well documented" in US history is the selfless devotion of
many more volunteers who have absolutely no connection with
amateur radio. It is a mark of good citizenship to selflessly
volunteer or even serve the community and nation. No amateur
radio license is required.

The FCC, the only agency in the USA that grants amateur radio licenses, does not define amateur radio as "selfless devotion by volunteers" for any kind of non-radio service in Part 97.1.

Present-day US amateur regulations require a minimum
of 10 questions for every required question in the VEC
pool. The FCC doesn't state any maximum.

Since the VEC Q&A pool is easily transported electronically,
they could generate more than 10 times the minimum
number of questions. Enlarging the Q&A pool will reduce
the possibility of "memorizing all" of the questions-answers
without changing the number of questions on the written
test itself.

>
>I guess being a citizen isn't worth very much these days.

Not among those to whom amateur radio has become a Life Style.

ARRL is not a government agency or organization. The FCC is.
The FCC regulates all of US civil radio services, not just amateur
radio.

ARRL pretends it's an agency and "representative" of amateur
radio when it is merely a membership organization. It has yet
to gain a membership total greater than a quarter of all licensed
US radio amateurs and is therefore a minority organization. It
"represents" a group that is less than half of a minimum majority.

>You have to be a ham to be able to respond to a government agency asking for
>comments.

K8MN thinks so but the FCC accepts comments from all citizens
on all US radio services. He pretends to be judge-advocate of all
amateur radio matters, of whom shall be entitled to commentary
on regulations that apply to all US citizens. He has no such legal
official authorization but has taken it upon himself to award himself
such a title.

Everyone must agree with K8MN's viewpoints or be subject to
personal insult and denigration. In other venues this would be
called dictatorship. In here he thinks that is called "good amateur
practice."

I totally agree with the coded segment. Only one comment...space the
letters more. Makes for an easier read.

I didn't realize how tough reading the code is when its written down. Guess
I actually did learn it the 'right way'.

Back to the 'subject'.....your both right. In some area's Ham radio is
dying. In others its not. Lets hope the two equal out.

And as for the bootlegging buttheads on ten meters. How come you all run
away when I dump a KW in CW mode on you?

Are you saying that the FCC and the ARRL didn't force incentive licensing on the hams? Well they most certainly did.

I was first licensed in 1961. I had my novice 3 months and then received the General. 13WPM and test in front of the FCC. I had just turned 14.

In about 1963 or so I started hearing via QST rumblings about a way to 'improve ham radio'. Later to be called incentive licensing.

In 1964 I left ham radio to join the military. This eventually ended my stateside activity totally in 1965 and I shipped over to South East Asia.

In mid 1968 I returned home briefly on my way back over to Asia and fired up my little CW station on 40 meters. 7.010 was the only crystal I could find. And received a little note from the FCC saying I should not be on that freq. I was somewhat confused so I called the issuing office. I was then informed of the incentive licensing coming into effect. The guy asked me how it was I hadnt known about it. I told him I was in Vietnam and missed the news. We both had a chuckle and I promised not to operate there until I upgraded.

From then until the mid 70s I stayed mad.

Yes, I lived it.

Phil, your story brings memories. Years ago, the company I work for in Rochester, NY, had a plant at Elmgrove. They also had one BIG NASTY heat sealer which a few of the folks on the floor tried to tell them they had a problem with (problem being defined as when the sealer was operating, you could draw a small arc with a lead pencil if nearby). Of course, management ignored the concerns. Until some folks showed up (Rochester-Monroe County airport was located only about 4 miles away) - funny, they weren't particularly friendly and they weren't selling candy either. Didn't someone say the Friendly Candy Company was on premises?

73 from Rochester, NY
Jim
ps - the heat sealer was shut down.

Nope. Anyone interested, licensed or not, can comment.

But why would someone who obviously has no interest in being a part of the ARS comment - unless they want to damage or destroy the ARS?

Yup.

>I believe that is true, but the first question is to us...Do WE
>believe the VEC system has satisfactorily done the job?
>I do, you may not. Let's answer that first.

First let me say that the VEC and QPC folks have done an amazing amount of work
- and all of it as unpaid volunteers.

But they are constrained by the system itself. The Q&A pool cannot be secret
under the VEC/QPC system - it's just not practical.
>
>You then said: "Whether that's true or not, how can anyone
>convince FCC different?"

Exactly.

>If we believe

>
>What's your viewpoint?

I think that license testing, and test generation, should be the FCC's job, not the job of unpaid volunteers. I think that having a published Q&A pool makes the testing process less indicative of the true knowledge of the person being tested, compared to a testing process where the same pool is kept secret.

But I don't know any argument that would convince the FCC to take over the testing process again.

You're kidding, right?

All I hear from the PCTA is that w/o the code exam you might as well give
the licenses away as a prize in a Cracker Jacks box.

Now its not broke?

That is correct, that is how I obtained my Novice ticket. It was
good for one year and non-renewable, so you either upgraded before
it expired or went off the air. Novices were limited to 75 watts
input to the final amplifier and had to use crystal control, no
vfo's.

> >
> >>Most vintage equipment can still be used on the air today. The dream rig of
> >>my
> >>Novice days was the Heath HW-16.

My first rig was a Heath DX-60 and Lafayette (sp?) KT-200 general
coverage receiver. I had two crystals for the 40 meter Novice
band, I remember one was 7.170.
When operating you had to first check your crystal frequencie to
see if anyone else was using that frequency, if not then you
called a 3 by 3 cq. Call cq three times, give you call three
times, repeat two more times. Then you listened for a reply by
scanning the band listening for your call sign, since it would not
be likely that another Novice would have the same crystal
frequencies you did.
After gaining my Conditional ticket, which if you lived over IIRC
125 miles from the nearest FCC examining office, you took by mail
like the Novice, I added the HG-10 VFO to the rig. The Conditional
granted the same privileges as the General.

Why do you think so negatively? Why damage or destroy?

Why not uplift the ARS?

Remove arbitrariness from the licensing and priveleges?

Remove from it the shackles of mandatory Morse/Farnsworth testing?

Improve the question pool?

I'm still trying to erase the mental movie where he spends most of his
on-air time answering questions about the place: color of the sand,
depth of the sand, crops which will grow in sand, etc. The rate would
have been further slowed by his pauses between QSOs to check whether the
station calling him was operating in his allocated band segment.

Imagine what his response might have been to a request for a CW contact.

He's a DXer, don'tcha know?

Dave K8MN

Oh, I believe your parents married. Why do I say your operation from
Somalia isn't kosher?--Because you don't have anything which says
permission to operate an amateur radio station was granted. How do you
go about proving that you had permission?

If your miilitary commander had provided written permission like that issued by the United Nations, you'd have been operating legally. You operated on some guy's verbal authorization. You don't have anything to provide to the DXCC desk.

There was no amateur radio operation permitted by the military in Vietnam. I know of two legal stations, both operated by American civilians during my time in country. My military commander did not have the authority to permit me to operate on the ham bands. I don't have any written permission either.

It looks as if you already have during at least one period. Is it
dawning on you that you have no way of proving that your operation was
authorized?

I don't know about your taking advantage, Brian. I never accused you of
"taking advantage". As to bootlegging, it surely is looking that way.
What proof of authorization to operate from Somalia do you hold?

It is worth as much as it ever was. Citizens are still permitted to
test for a radio amateur license. Len hasn't taken advantage of the
opportunities afforded by his citizenship. The failure to act is his.

> You have to be a ham to be able to respond to a government agency asking for

Uhhhhhhhh Len--Brian's already stated that he holds no written
permission to operate from Somalia. Mere bootlegging, despite your
attempted misdirection *is* the issue being discussed. You'll likely be
unhappy that morse testing hasn't been brought up.

> There is no hope for much rational discussion on any subject in here
> without incurring the rage and wrath of individuals such as K8MN,
> W0EX, and (lately) W1RFI.

I'd think you'd realize that you have little ammunition for a rational
discussion of amateur radio, Len. You aren't a ham and you aren't
civil. You're pretty much the newsgroup equivalent of static.

I do other things, Len. I am interested in current events. I play the
guitar. I garden. I read. What about those non-radio amateurs who spend
large amounts of time posting to an amateur radio newsgroup? How do
they stack up?

> ARRL is not a government agency or organization. The FCC is.
> The FCC regulates all of US civil radio services, not just amateur
> radio.

We all knew that and this newsgroup doesn't deal with all 0f US civil
radio services.

> ARRL pretends it's an agency and "representative" of amateur
> radio when it is merely a membership organization.

Prove that the ARRL pretends that it is an agency.

> It has yet
> to gain a membership total greater than a quarter of all licensed
> US radio amateurs and is therefore a minority organization. It
> "represents" a group that is less than half of a minimum majority.

The ARRL is the largest amateur radio organization, by far, in the
United States.

These are the number of unexpired FCC ARS licenses held by individuals
on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of August 31, 2002:

Novice - 36,884 (decrease of 12,445)
Tech - 243,523 (increase of 38,129)
Tech Plus - 76,588 (decrease of 52,669)
General - 138,837 (increase of 26,160)
Advanced - 84,726 (decrease of 15,056)
Extra - 102,670 (increase of 23,920)
Total - 682,831 (increase of 8,039)

You've made a strawman, Brian, PCTA'ers don't share all the same opinions. I support code testing, yet I never thought the VE system was broken or even bent. FCC or VE, I don't care. I don't see where one is better than the other. I suppose if I had to choose, It would be the VE's, since they don't use tax money.

It is neither good amateur practice, nor is an example of strength.

I do disagree with the content of his replies to you. I believe I noted this to him at some point in the past. I cannot control him of course, nor do I want to. On the ham bands I would be shocked and chagrined to hear him talking like that.

I also am a firm believer that good manners should never be interpreted as weakness.

But somehow, I can disagree with him, and it doesn't turn into warfare on the web.

And Dave has no interest in the places he works on the air, or the people he talks to. The other operator is either a new band, a multiplier, or a dupe. Not a person.

Some ham ambasador. Lotsa good will there. Its just me, me, me, me, me.

Hmmm, back to the ARRL's DXCC desk. Is the dxcc desk the final authority on
legal amateur operations everywhere?

It would appear that Len is correct. You do view the ARRL as a
quasi-governmental entity capable of authorizing amateur operations in
foreign countries. Wow.

Dave, so your commander was just "some guy," huh?

Too bad about there being an existing government that refused to issue
military members an operating permit. I wonder why that was. I hope they
didn't theink you would try to take advantage of them.

Maybe if Somalia had had a government to refuse my operation then that would
have been the end of it.

"you guys run away when its anything less than 5/9. we freebanders are hammering out to the pacific long into the night while ten meters is silent. dont you think the arrl and the FCC see we are making better use of the bands? most of these dick head hams in here are no codes, you guys would be better off picking a 6 meter freq and hoping for whats left of the cycle to do some magic if you want to work most of these idiots. thats why the FCC not only dont bust freebanders but they look to us as the future of the hobby. look at Rain report they are all hams being popped. Ham is dieing and nocodes like JJ can only sit and bitch like fat old men."

It is interesting to note that these are the same guys who think that the beeping sounds they hear on, say 28.100 to 28.500, are birds chirping (I guess). There have been numerous times that I have been QRMd by these "Legal" freebanders. Since the areas in which I work are CW/Data/Rtty only, it's not possible for me to switch to Phone and tell them they are "stomping" all over me. But, to be quite frank and based on what most of them have written, I don't think they care. The general attitude I have detected is that they think as long as they don't hear anything or only hear that pesky beeping sound, the "Channel" must be clear. I guess that's the difference between Hams and CBers. One group understands the concept of on air courtesy, and the other group doesn't.

> trying.

I took part in a class where the students were taught how to pass the 5 WPM code test in about 30 minutes. They were taught to write down the dots and dashes, and they learned how to build a "decoding chart" by memorizing several phrases where the first letter of each word was the letter for that position in the chart.

Worked well for passing the test (>95% passing). Completely useless for actually operating.

Dave, you didn't even have the most rudimentary information about operating from Somalia or any other piece of real estate that has no government. You admitted that repeatedly when, after saying that I didn't get it right, you could offer absolutely no information whatsoever. All you knew was that whatever I said had to be wrong.

I told you that I had permission from my commander to operate, which you and Ed have tried to pick apart, but lo and behold, what does the ARRL web site say on the matter?

Somalia (T5)
At this time to operate in Somolia[sic] you would need permission from the United Nations or your military commander.

So in the end, I did what was required, and you looked stupid. And Ed ducked out of sight.

During the few hours I had to grab my gear, say goodbye to my family, and get out of the country on December 4, 1992, I forgot to check in with the quasi-governmental ARRL DXCC desk to have them bless my operation.

OBE, Overcome By Events.

I don't recall the FCC ever putting out a notice asking people to apply for
radio licenses. However, I do recall that the FCC has asked citizens of
their comments on impending rule changes.

> > You have to be a ham to be able to respond to a government agency asking

Agreed, ad even if the FCC went back
to administering tests, the questions would
become public anyway. The internet has made
it extremely easy to distribute materials without
any oversight from government, etc.

Well, Mr. Lennie, the fact remains that FCC regards the Amateur Radio Service as
such, and they have a hell of a lot more credibility than you do. And considering that
Amateur Radio has proven itself time and again, including after 9/11/2001, your attempts
to argue with the relative status of Amateur Radio fail miserably.

The biggest user of the "give away as a prize in Cracker Jacks box"
in here is W0EX. Other PCTAs have written the same thing. Still
others say "it would be given out on street corners for nothing."

It is NOT a "strawman" except in the use by those PCTAs.

While it is true that all PCTAs do not say such things, the
general group that Brian Burke refers to is in here. They have
posted such things. Such is archived.

The answer to get around the alleged "memorization" charge
(which supposedly "dumbs down" present testing) is to request
the VECQPC to increase the number of pool questions.
Present-day US amateur radio regulations do not have any
maximum number for the pool questions, only a minimum of
10 for each required test question.

No change in US amateur radio regulations is required to make
the question pool large enough to preclude memorization of
every one that might appear on a test.

What about them?

Who cares what you do on breaks from thundering at those who
don't agree with you?

Do you do Joan Baez imitations with your guitar music?

>> ARRL is not a government agency or organization. The FCC is.
>> The FCC regulates all of US civil radio services, not just amateur
>> radio.
>
>We all knew that and this newsgroup doesn't deal with all 0f US civil
>radio services.

It has dealt on personal gunnery (at length), US foreign policy, Citizens Band, locomotive history, industrial process control electronics, just to name a few NON-AMATEUR RADIO subjects.

The FCC regulates US amateur radio and grants amateur radio licenses. ARRL does not. K8MN is not an official of the FCC.

>Prove that the ARRL pretends that it is an agency.

Constant instructions from ARRL on "writing your director" on policy matters.

No ARRL official of any kind has any jurisdiction BETWEEN citizens and a government regulatory agency. NONE.

>The ARRL is the largest amateur radio organization, by far, in the
>United States.

Irrelevant. ARRL has a membership total LESS than a quarter of all licensed US radio amateurs. It is definitely an organization of the MINORITY.

>Prove that K8MN thinks so. Prove that he pretends to be
>judge-advocate. Prove that he has awarded himself the title "Judge
>Advocate of all amateur radio matters".

K8MN's own message show that distinctly.

>What happens to those to don't agree with Leonard H. Anderson's
>viewpoints?

Mostly, nothing. Those that become enraged will post personal insults in here. Sometimes they are fun to see when they go off the deep end in their wrath and rage. :-)

>> comment - unless they want to damage or destroy the ARS?
>
>Why do you think so negatively? Why damage or destroy?

You have to understand that he has no effective counter to some
comments of others that think differently from his way. The totally
false charge above is a good example of the negative reply.

Some overly-identify the entire ARS with their own personal
desires and viewpoints. Anyone against their own personal
viewpoint is thus falsely charged with destruction of the "entire
US ARS."

>Why not uplift the ARS?

Normally that would be a good, even noble idea.

In practice, individuals see only their own opinions as being
"uplifting." Any contrary opinions are falsely charged with
"insults to the entire ARS." That's as if their own personal
viewpoints are the only ones held by the ARS.

>Remove arbitrariness from the licensing and priveleges?

Those that made it through the old system are loath to
change it. Some wish to retain the eliteness for their own

self-worth...as if the regulations pertained only to them and
nothing to others coming in the future.

>Remove from it the shackles of mandatory Morse/Farnsworth testing?

Again, those shackles must be retained if they overcame
the hoop jumps. "All must do as they did."

>Improve the question pool?

Too hard to communicate with the VECQPC. That requires thinking.
It is easier and more fun to rail against the NCTA and those of
lesser license class. That doesn't require thinking, only emotion.

Beep, beep.

I came into the pro-code vs. no-code fray as a relatively unbiased newbie. As such, it never even occured to me to think of the code as a "barrier." This is the requirement (Or "rite of passage," if you will.) to gain access to HF. I really thought the no-code contingent got what it wanted when the no-code AR ticket was created? I don't really know how to descibe it, in a politically correct manner, when you give a hungry chap half of your lunch...and they're still p/o'd because you didn't give them the "entire enchilada." I'm sure this analogy will get picked to pieces, but those "in the know" will get it. Kinda sad really.

Just don't try listening to 50.525. You won't hear much there. 52.525
FM is the national simplex calling frequency. 50.125 is the SSB
calling frequency. Monitor either and you might hear something on an
opening. I've heard of people buying the old Monitor/Minitor EMS/Fire
pagers modified to 52.525 to listen for band openings. They'd keep it
on their belts and walk around with it and if they heard anything on
the pager, they knew the band was open.

Eww, that's nasty stuff. There was a company in the old textile mill
where we had the family machine shop which made large swimming pool
liners and covers. They had a row of multi-kilowatt vinyl sealers in
operation. I asked the owner if the things were still legal. All I got
was a grim stare. Of course they weren't legal, the back panels were
off all of 'em awready, ya could reach in and touch the plate caps if
ya got stupid enough to do that. And they were right under the final
approach to Philly's short runway. I guess the things didn't have any
effect on the needles in the a/c panels or you guys & N1 woulda been
all over him.

They're legendary airplanes, actually they're cult planes and I'm a
member, I have three books on 'em. Lantana airport in Lantana FL is
one of the DC-3 magnets, gotta be 10-12 of 'em based there. I spent a

whole day there just taking photos. Yup, a good DC-3 jock can fly 'em like a fighter or a helicopter depending on the mission, the tales are unending. Offhand I think the Alaskan bush pilots are the real masters of that game.

I had an oddball situation. I owned and flew a powered ultralight under FAA Part 104 regs. Those are not FAA certificated and registered a/c so they don't have FAA side/tail numbers. I only ever flitted around the northern Chesapeake Bay with the thing carefully avoiding Phillips Army Air Base, the Aberdeen Proving Grounds and the Baltimore-Washington TCA so I did't have any need for a radio. Plus ATC was the last bag of worms I wanted to deal with. But I thought I might try some real touring and pondered an airband HT for just in case. I asked around about what an ultralight should use for a callsign but never got a straight answer from the hanger bums or the FBO sparky. I never did buy the radio but I'm still wondering: If ya buy an airband HT for use in flight ops and license the radio does the license come with an FCC-issued callsign which I could have used? One of the five letter callsigns - which I've never heard on the air except as used by foreign a/c . . ?

>say on the matter?

Against my better judgment I'll get into this cat-fight.

The only entity that can give you permission to operate amateur
radio in any country is the regulatory Administration - government
entity duly represented to the ITU. If such an Administration does
not exist, there is no entity authorized to give you permission to
operate there.

Your military commander DOES NOT have the authority to allow you to
operate what is essentially a civilian activity in a foreign country
unless S/HE is "deputized" for that purpose by the duly constituted
Administration. No Administration? No authority to permit you to
operate. Your military commander is not the government of Somalia
for purposes of zmateur radio licensing.

What call sign did you use and how was it issued?

Consider yourself lucky that some nit-picker who knows the law did
not turn you in to the FCC for action against your US license for
violation of the International Radio Regulations which require that
you hold a valid authorization from the Administration of the
country in which you are located, and turn in your commander to the
appropriate military authority for exceeding his/her authority.

See this:

§Section 87.107 Station identification.

(a) Aircraft station. Identify by one of the following means:

(1) Aircraft radio station call sign.

===> (2) Assigned FCC control number (assigned to ultralight aircraft).

(3) The type of aircraft followed by the characters of the
registration marking ("N" number) of the aircraft, omitting the
prefix letter "N." When communication is initiated by a ground
station, an aircraft station may use the type of aircraft
followed by the last three characters of the registration
marking.

(4) The FAA assigned radiotelephony designator of the aircraft
operating organization followed by the flight identification
number.

(5) An aircraft identification approved by the FAA for use by
aircraft stations participating in an organized flying activity
of short duration.

>I never did buy the radio but I'm still wondering: If ya

No, but see:

Section 87.18 Station License Required

(b) An aircraft station is licensed by rule and does not need an individual license issued by the FCC if the aircraft station is not required by statute, treaty, or agreement to which the United States is signatory to carry a radio, and the aircraft station does not make international flights or communications. Even though an individual license is not required, an aircraft station licensed by rule must be operated in accordance with all applicable operating requirements, procedures, and technical specifications found in this part.

§Section 87.47 Application for a portable aircraft station license. -

A person may apply for a portable aircraft radio station license if the need exists to operate the same station on more than one U.S. aircraft.

There's always the bar exam (lawyers) or the medical exams states give
in addition to your MD degree to get a doctor's license.

Maybe a little closer to home is the tests to become a licensed electrical
house wiring inspector.

Your analogy is way off. It's more like taking an Electronics course with
a compulsory Requirement to pass a test in Anglo-Saxon, and then being
told you should be pleased because you only have to translate a short
passage to get partial credit. For the record I have an EE degree, have
been a ham for 22 years, am actually quite interested in Anglo-Saxon(!),
although nobody ever forced me to study it, passed 20 wpm code but can
hardly remember the code, and lastly, yes I hate code!

Actually, being a taxpayer he would "have" the FCC via Congress.

But he wouldn't "have" the ARRL unless he joins it.

Add to that convincing the FCC to try to get Congress to allocate enough money
to do the test sessions again.

In a sense, does it really require more knowledge to operate SSB on 14.157KHz
vs 14.327KHz? The only real reason for having subbands for higher licenses
is that your frequency you're using is easily determined by a remote FCC site.
They can't easily tell how much power, maybe you're using a beam aimed
at them....

Dan, don't change your assertion after making it. You said you blamed ARRL
for incentive licensing, not the FCC. Now you want to co-blame both. Of course
the FCC did it, and actually the ARRL made a successful case for toning it down
considerably, otherwise it would have been of much more negative personal
impact. I lived it too, and was also annoyed that I lost privileges. But life
goes on, and going around mad didn't get me back on 7005kc, so it was time to
hit the books and W1AW (that's ARRL) on-the-air code practice. In no time at
all I got it all back, in spades.

You have an option. Were you forced to take that curriculum? I have a degree in aeronautical engineering and one of the required courses was English Literature. So while we were cramming all night to pass everything from Avionics to Hydraulics to Calculus...we had to shoe-horn some English Lit in there as well. Cry about it? No, this was the curriculum WE chose. We could either "bitch and moan" or "get it done!" It's a personal choice where you want to invest your time and energy. You're right. I like your analogy much better.

But you've already done that. Lack of written authorization is prima facie evidence of no valid permission. For that matter, your erstwhile commander may not have understood what you were asking for, and if queried after a full explanation might very well state that he gave you no such verbal permission. That would leave you out on a very long limb.

Just how does the FCC get involved in foreign country radio
use by the US military?

In the creation of the NTIA, the NTIA monitors government use
of the EM spectrum. The US military is relatively autonomous
in what it can do anywhere, just as long as it doesn't interfere
with other users, including US military units.

The final authority of radio use in the US Army would reside
with the Chief Signal Officer. There is a large staff under that
officer which plans and executes appropriate frequency use.
The US Air Force would have a similar radio organization.

I've never known of any USA or USAF radio unit consult any
International Radio Regulations, much less any ITU-R manual
of recommendations before establishing any radio installation.
Nor will I accept your advice on "turning in a commanding
officer" for breaking some civilian laws in radio use. That might
be a cute plot device for the TV series "JAG" but it is as
kosher in the real military as a ham sandwich.

>Well, Mr. Lennie, the fact remains that FCC regards the Amateur Radio Service as
>such, and they have a hell of a lot more credibility than you do. And considering that
>Amateur Radio has proven itself time and again, including after 9/11/2001, your attempts
>to argue with the relative status of Amateur Radio fail miserably.

That wasn't anything at all to do with patriotism.

The FCC letter to Reliant Energy had only one purpose, and that to protect Ed Gerber, W5GCX, from getting interfered with and monetarily ripped-off by Reliant Energy officials. The FCC did a very good thing for a single radio amateur. Don't you think so?

Hans Brakob tried to use a part of that to settle some kind of "score" he felt needed from a long time ago. He implied one thing from something entirely different. I showed him that error.

Throughout Title 47 CFR, the FCC uses the word "service" in two ways. In the title of various Parts, "service" denotes a type and kind of radio transmitting activity. For common carriers (interstate long-distance lines, microwave relays, etc.) the word "service" denotes the common carrier's available service to customers, what they provide for various communications means.

The word "service" has many other meanings such as "service to the nation" (as in military service, volunteering to do some government task for little or no money) or "service to the community" (as in charity work or jury duty, both for little or no money). "Service" can also mean serving at a food place such as a waitress serving customers. By extension of that, anyone who serves anything can be said to provide a service.

Throughout Title 47 CFR, the word "service" denotes a regulatory term denoting the type and kind of radio transmitting activity covered by a particular regulation Part. The full definition of US amateur radio is given under Part 97.1. In none of the five paragraphs of that definition does it describe amateur radio as something patriotic, of service to the nation, or of service to the community. Since amateur radio is an activity done without pecuniary interest (not for money), it cannot be a common carrier that provides a communications service for customers.

See also Citizens Band Radio SERVICE or Radio-Control SERVICE as described under Part 95, Title 47 CFR. [capitals for emphasis]

In the FCC letter to Reliant Energy, they corrected Reliant Energy's description of Mr. Gerber's "use" of amateur radio by providing the essential definition of US amateur radio service. They did NOT describe Mr. Gerber's amateur radio activity as being patriotic, or of "service to the nation," or of "service to the community." As an independent amateur licensee, Mr. Gerber could NOT legally provide for "users" other than himself.

Reliant Energy's attorneys used improper language in describing amateur radio activity and the FCC merely corrected them on that in addition to pointing out charges made to Mr. Gerber for correction of Reliant's own problems was unethical. The FCC also reminded Reliant Energy that THEY are responsible for illegal

RF transmission as defined in regulations covering incidental radiation devices.

You really do NOT want to get into some hissy-fit catfight over patriotism, do you?

The subject of the word "service" in FCC regulations was covered in here well over three years ago. That was way before 11 Sep 01. The FCC's use of "service" as a regulatory term has not changed.

An amateur radio license does not require services of a patriotic nature, nor is it defined as such, even remotely. Yes, some radio amateurs DO indeed perform a service to their communities in operating their radios to assist local communications. Such service is NOT exclusive to amateur radio but may be performed by ANY radio service under emergency conditions.

NO radio license is required of a citizen to be of service to their nation or their community or even to the world at large. Good citizenship does not require federal licensing in any form.

By the way, my surname is Anderson. The use of "Mr. Lennie" is inappropriate.

To be honest, it is quite easy to get a CB up to 28015KHz. I'd pay good
money to see someone get one up to 28015MHz! That would certainly be a
trick and a half and then some.....

I did. I operated under the Auxiliary Military Radio Service....No,
that's not a scrambled acronym for MARS. KA6CM was my callsign under AMRS.

AMRS was the authority that American Amateurs operating from American
installations on Japanese soil operated under. My copy of AMRS rules cited
international and American regulations.

Nope... my only required allegiances are to the FCC to operate in a manner in accordance to the rules, and of course to our country. Being an alleged "free-loader" denotes that there is something of actual value.

>>Well, Mr. Lennie, the fact remains that FCC regards the Amateur Radio
>Service
>as
>>such, and they have a hell of a lot more credibility than you do. And
>considering that
>>Amateur Radio has proven itself time and again, including after 9/11/2001,
>your attempts
>>to argue with the relative status of Amateur Radio fail miserably.
>
> That wasn't anything at all to do with patriotism.

He didn't say it was.

The FCC affirmed it's position that the Amateur Radio SERVICE is just
that, a radio SERVICE.

>The FCC letter to Reliant Energy had only one purpose, and that
> to protect Ed Gerber, W5GCX, from getting interfered with and
> monetarily ripped-off by Reliant Energy officials. The FCC did a
> very good thing for a single radio amateur. Don't you think so?

I do. But it also set a legal precedent. The FCC stated, without any
room for misunderstanding or misinterpretation, that Amateur Radio IS a radio
SERVICE, and that it's licensees deserve protection for Part 15 emmiters.

By the way, how is YOUR Part 15 station coming along, Your
Licenselessness?

>Hans Brakob tried to use a part of that to settle some kind of
> "score" he felt needed from a long time ago. He implied one
> thing from something entirely different. I showed him that error.

The error was yours, and the FCC proved it. Now you run along and write
THEM a letter and tell them that YOU said theya re wrong, and to fix it...We'll
wait to see what transpires.

>Reliant Energy's attorneys used improper language in describing
> amateur radio activity and the FCC merely corrected them on that
> in addition to pointing out charges made to Mr. Gerber for
> correction of Reliant's own problems was unethical.

No, Your Stupidness...Reliant Energy tried to argue that Amateur Radio was NOT a true radio service, and that it was just too bad that "amateurs" were being interfered with.

The "improper language" was the part where they tried to denigrate Amateur Radio and tried to slough off thier responsibilites.

>You really do NOT want to get into some hissy-fit catfight over
> patriotism, do you?

With a filthy rear area coward such as your self, Lennie? Someone who tried to insinutate that since HE was in the same unit as that of a lot of guys who were KIA three years prior to his arrival in-theater, that HE deserved some accolades for that service?

YOU have NO understanding of what "patriotism" is, Lennie. Never did...never will. You are the worst kind of coward...You hide behind the sacrifices that others made in order to make yourself look better....Sacrifices that included losing thier lives.

Does your wife know you do that?

>By the way, my surname is Anderson. The use of "Mr. Lennie"
> is inappropriate.

I'll just stick with "Your Putziness". It fits.

And all of these comments saying that the field organization is not responsible for anything apparently. These are some of the only ways to see the organization in action, which I would think would be a major selling point to join the organization other than "just because I told you so," or the use of mafioso tactics.

So far, from the original thread, the whole concept was for reasons why I or others should join, other that it being a magazine subscription. So far, most everyone has stated in not so many words, 'its none of your business." (jsut basically phrased a different way)

Gee, if I was going to buy a car or something else like that, I sure would be requiring a little more information that merely the price of the car. And if they basically came off with the attitude of what I have seen so far, I definitely would look elsewhere.

SNIP

Once again it's necessary to point out that this is USENET, NOT an activity regulated by 47CFR97.1 or subsequent.

Is it the thought that if YOU possessed an Amateur license that you might NOT be allowed to act in a certain manner on USENET...? Is THAT the reason you ae unwilling to live up to your boast of intent to get an "Extra lite out of the box"...?

BTW...I notice that you cut out all of your vileness from the quoted post and only pasted my repleis to your comments.

Too embarrassed to let people see how stupid you were twice? Didn't want to have to answer a lot of embarrassing questions that you can't HONESTLY answer without sinking your own rants???

Tisk, tisk, tisk.

Lennie....You're a piece of work...

It isn't necessary for me to prove your operation was not bootlegging.
It is incumbent upon you to provide proof that you had authorization.
Since you have no written permission, that's going to be a tough one for
you.

Sure I did, Brian. The guys I contacted were interested in getting a
new one in their logs, not having me present an audio travelogue.

> The other operator is either a new band, a multiplier, or a dupe.

You have it backwards. I was a new band, multiplier or country.

> Some ham ambasador. Lotsa good will there. Its just me, me, me, me, me.

I've provided plenty of good will *and* all my operations were
appropriately licensed. I can prove it and the QSL cards all count
toward DXCC.

You'll have to prove that you were authorized to operate, Brian. You
can't do so because, as you've stated, you had only verbal permission.
Maybe you can dig up your military commander of the time and have him
issue retroactive permission.

> foreign countries. Wow.

This is the part where you begin to be the real Brian. You read
something and draw an incorrect conclusion. The ARRL doesn't authorize
operations. The ARRL sponsors DXCC. The DXCC desk decides whether an
operation will be accepted for DXCC purposes. Where there is any
question of an operation's legitimacy, the desk may request proof of
licensing along with copies of passport entry or exit stamps and/or
visas.

It doesn't matter about *my* commander. I did not operate based on
verbal permission. Amateur operation was forbidden.

> Too bad about there being an existing government that refused to issue

> didn't theink you would try to take advantage of them.

The government of Vietnam also banned dancing. I wonder why that was.

> Maybe if Somalia had had a government to refuse my operation then that would
> have been the end of it.

Sure would have. If you had written authorization from your commander to operate, that'd also likely be the end of it. As it is, you can't prove that anyone ever granted you permission to operate.

I'd certainly have had the sense to have any such "permission" be put in
writing. Absent the document, you have nothing which states that your
operation was blessed by the U.S. military. Getting things in writing
would have been a no-brainer.

Who looked stupid? Could it be the guy who has no documentation
whatever to prove that he obtained his commander's authorization to
operate an amateur radio station in Somalia?

> During the few hours I had to grab my gear, say goodbye to my family, and
> get out of the country on December 4, 1992, I forgot to check in with the
> quasi-governmental ARRL DXCC desk to have them bless my operation.

It isn't necessary to obtain permission from the DXCC desk to operate.
It is necessary to obtain written documentation of your permission to
operate so that you can provide proof that you were not Mogadishu Slim.
You can't provide such proof.

> OBE, Overcome By Events.

OBE is *overtaken* by events.

OBS - Overcome By Smoke.

Swing and a miss. The ARRL can't make bootlegging legal. You could have done that by obtaining something in writing from your commander authorizing your amateur radio operation from Somalia. You're generating more smoke.

It doesn't matter whether the FCC puts out a notice or not. Len is
still afforded the opportunity to obtain an amateur radio license. His
failure to do so isn't my problem, the ARRL's problem or the FCC's
problem.

> > > You have to be a ham to be able to respond to a government agency asking

Right--even my comments. I do, however, have an ARRL division director. I even have a license issued by the FCC which permits my operation on the ham bands. Len is 0-for-2.

I'm asking you because you are the only example I can come up with.
You'd be the experrt on non-hams devoting a significant amount of time
posting to a newsgroup which deals with something in which you are a
non-participant.

> Who cares what you do on breaks from thundering at those who
> don't agree with you?

Which way do you want it, Len? First, ham radio is a lifestyle. Next, you don't care what I do when I'm not involved in amateur radio. I pointed out that I don't consider amateur radio a lifestyle. My life is filled with many things.

> Do you do Joan Baez imitations with your guitar music?

I really do an imitation of Joan Baez imitating Kenny Burrell on guitar.

You left out your volumes on your personal military history, your diatribes on commercial engineering pratices and the like.

> The FCC regulates US amateur radio and grants amateur radio
> licenses.

We all knew that one too.

> ARRL does not.

Yep. We knew that one too.

> K8MN is not an official of the FCC.

We all knew that one too. We're reminded that you aren't an official of the FCC and that you aren't a radio amateur.

>
> >Prove that the ARRL pretends that it is an agency.
>
> Constant instructions from ARRL on "writing your director"
> on policy matters.

That's not proof. The American Legion and VFW want me to write to district commanders too. They aren't pretending to be government agencies.

> No ARRL official of any kind has any jurisdiction BETWEEN
> citizens and a government regulatory agency. NONE.

We knew that. Those of us who are League members know why the League suggests contacting a division director. See if you can fathom why that might be.

> >The ARRL is the largest amateur radio organization, by far, in the
> >United States.
>
> Irrelevant. ARRL has a membership total LESS than a quarter
> of all licensed US radio amateurs. It is definitely an organization
> of the MINORITY.

No, it isn't irrelevant because you say it is. The ARRL is the largest,
by many magnitudes, amateur radio organization in the U.S.

> >Prove that K8MN thinks so. Prove that he pretends to be
> >judge-advocate. Prove that he has awarded himself the title "Judge

Nope. That claim does not constitute proof.

You mean mostly they are subjected to personal insults and denigration
by Anderson or that their ideas are subjected to casual dismissal.
Sometimes you are "fun to see" when someone here raises your ire.

All of these years posting here and you are still not a participant in
amateur radio.

Clear this up for us, Len. Are you a part of amateur radio under the
old system or are you part of amateur radio through the new system?

>
> >Remove from it the shackles of mandatory Morse/Farnsworth testing?
>
> Again, those shackles must be retained if they overcame
> the hoop jumps. "All must do as they did."

Let's see. I became under a system in place in the early '60s. I
upgraded twice under the "old" new system put in place in '68. The
"new" new system was put in place a couple of years ago. Under the
testing currently conducted--not only are all not required to do as I
did, it is impossible for them to do so.

Blam! There goes another tire(ade).

He doesn't have an amateur radio license issued by the FCC. I guess
we all "have" the Justice Department and the Department of Agriculture.

> But he wouldn't "have" the ARRL unless he joins it.

He wouldn't "have" the ARRL even then because Associate Members are not
voting members. Only licensed radio amateurs are voting members. Len
still has a couple of steps to complete.

In article <aktrennra1@slb2.atl.mindspring.net>, "Dan/W4NTI"
<w4nti@mindspringnospam.com> writes:

>Are you saying that the FCC and the ARRL didn't force incentive licensing on
>the hams?

As W0EX says, don't change the tune. FCC made the new rules. ARRL had input -
and so did lots of non-ARRL folks. All in accordance with the rules, over a
period of about 4 years.

> Well they most certainly did.

No. The situation is more complicated than you have presented. Here's a brief
history of the proceedings:

In 1951 the FCC overhauled the venerable ABC system, and added three new
licenses - the Novice, Technician, and Extra. The new license requirements and
privileges were:

Novice - 5 wpm code test, sending and receiving. Simplified written test on
theory and regulations. No experience required or allowed. Extremely limited CW
privileges in parts of the 80 and 11 meter bands, plus CW and phone privileges
on part of 2 meters. 75 watts maximum power input, crystal control only. One
year license term, nonrenewable. Exams given at FCC examination points or by
mail if conditions for mail exams were met. The Novice was meant to be a sort
of "learner's permit" to help new hams get started.

Technician - 5 wpm code test, sending and receiving. Basic written test on
theory and regulations - same written test as General class. All amateur
privileges above 220 MHz. Exams given at FCC examination points or by mail if
conditions for mail exams were met. The Technician was meant for those who were
more interested in VHF/UHF experimentation than HF operating. The proposed
Class D license was implemented as the Technician.

General (old Class B) - 13 wpm code test, sending and receiving. Basic written
test on theory and regulations. Exam given at FCC examination points only. All
amateur privileges EXCEPT the only 'phone bands available to Generals and
Conditionals were 10, 11 and what was left of 160.

Conditional (old Class C) - Same as General, except tests given by mail.

Advanced (old Class A) - 13 wpm code test, sending and receiving. Basic and
advanced written tests on theory and regulations. At least one year of
experience as a General or Conditional licensee. Exam given at FCC examination
points only. All amateur privileges were granted with an Advanced license. This
license was to be phased out and replaced by the Extra. To this end, no new
Advanced class tests were given after 1952, but holders of Advanced class

licenses could renew and modify them indefinitely.

Extra - 20 wpm code test, sending and receiving. Basic and higher level written tests on theory and regulations. At least two years of experience as a General, Conditional or Advanced licensee. Exam given at FCC examination points only. All amateur privileges were granted with an Extra license.

In 1954 the FCC made Novice and Technician available by mail only.

The announcement that there would be no more new Class A/Advanced licenses after the end of 1952 caused many hams to get one while they were still available, rather than face the more difficult requirements of the new Extra license. A few amateurs went after the Extra, though.

But in early 1953 the FCC made a surprise about-face and announced that all amateur privileges would be granted to all holders of General, Conditional, Advanced and Extra class licenses. No official reason was given, nor was their an NPRM or its equivalent process.

In 1958 the FCC began to rethink its late-1952 decision granting all privileges to General and Conditional class amateurs. They noted that homebrewing and experimenting were decreasing, phone operation was increasing, and the technical knowledge and operating skills of many amateurs seemed mediocre at best. It's also possible that the unexpected launch of Sputnik by the Soviet Union in 1957, and the Soviets' early space triumphs, led the FCC to think that American amateur radio needed some kind of change in the licensing area.

At that time, many new hams followed a fairly straightforward path. First, a new ham got a Novice license, and set up a simple station, often with homebrew, secondhand, or converted surplus gear. The Novice year was marked by rapid learning and improvement of skills - it had to be, because if the new ham did not upgrade before the license term ended, he/she would be off the air until a higher level license could be earned. Most new hams upgraded to General or Conditional, but some went to Technician. However, once the General or Conditional license was passed, many hams bought new manufactured gear and lost interest in increasing their skills or technical knowledge. The FCC thought
this was a problem, and began to inquire about ways to change what they saw as an undesirable trend.

The ARRL responded in 1963 with a simple proposal: Reopen the Advanced to new applicants, and restrict the 75, 40, and 20 meter phone bands to Advanced and Extra licensees. This was essentially a return to the pre-1953 setup. The idea was to add one more step on the ladder from beginner to full privileges, and thus extend the learning time and raise the level of knowledge required for an all amateur privileges license. The concept became known as "Incentive Licensing".

The FCC responded with a general call for ideas, and was deluged with responses. No less than 10 proposals were given RM numbers by the FCC. The FCC combined features from many of these proposals and came up with a complex plan.

The HF bands would be divided into segments, or subbands, with some segments reserved for Extras, some for Advanceds and Extras, and some for all classes General and above. 6 meters was also slightly involved. Novices would be unaffected by these changes, and Techs were only affected by the change to 6 meters.

One particularly unpopular feature of the FCC plan was the replacement of the Advanced license with a new "Amateur First Class" license, with a new 16 wpm code test and a new written test. FCC proposed to demote holders of the Advanced to General. This idea was finally dropped due to strong opposition from the amateur community, including the ARRL.

Several proposals and counterproposals went back and forth, each with different features, all hotly debated. Finally in 1967 a final plan was announced. Enacted in two phases, some of the HF spectrum available to holders of General and Advanced class licenses would be withdrawn from their use. In addition, anyone with 25 years as a ham and an Extra class license could get a 1X2 call.

Opinion on this change was deeply divided. A very slight majority favored the plan, but many opponents felt cheated and had bitter resentment towards the FCC, ARRL, or both. There was a feeling among some that they had the "right" to all amateur privileges.

Some key points:

- Incentive licensing was not a new or revolutionary idea.

- A majority of those who commented supported the idea.

- There was a several-year-long process that developed the changes. The process was open to input from all, and included elements of ideas from many sources.

- The original 1963 ARRL proposal was simple, and did not affect CW/data privileges at all. Also, it granted full privileges to Advanceds as well as Extras.

- There were at least 10 proposals besides the ARRL one.

--
Complicated story. Much more to it than 'the ARRL and FCC forced incentive licensing on the hams'

>I was first licensed in 1961. I had my novice 3 months and then received
>the General. 13WPM and test in front of the FCC. I had just turned 14.

That's about how I got started in 1967/68.

>In about 1963 or so I started hearing via QST rumblings about a way to
>'improve ham radio'. Later to be called incentive licensing.

>In 1964 I left ham radio to join the military. This eventually ended my
>stateside activity totally in 1965 and I shipped over to South East Asia.

>In mid 1968 I returned home briefly on my way back over to Asia and fired up
>my little CW station on 40 meters. 7.010 was the only crystal I could find.

>And received a little note from the FCC saying I should not be on that freq.

Must have been later than mid-1968. The changes did not take effect until November 22, 1968.

>I was somewhat confused so I called the issuing office. I was then informed
>of the incentive licensing coming into effect. The guy asked me how it was
>I hadnt known about it. I told him I was in Vietnam and missed the news.
>We both had a chuckle and I promised not to operate there until I upgraded.

>From then until the mid 70s I stayed mad.

Seems to me you thought that the rules should not have changed while you were gone.

>Yes, I lived it.

So did many of us.

>are hams today than back when when ham radio "was in it's glory days".

Yup. Add to that:

- Licenses are much easier to get
- More bands, more modes, more power (except for a few modes like AM)
- Equipment is smaller, lighter, more reliable, and is much much less expensive in performance-per-inflation-adjusted-dollar than ever before. Plus more companies making a wider variety.of ham gear. Plus a mountain of good used gear.

Who must I prove it to? Certainly not you.

I've done all kinds of wonderful things under verbal orders. This was no
different.

Actually, if they're on 28015 KHz, they're smack in the bottom end of
the 10-meter ham band... If they're on 28015 MHz, I'm sure they've
microwaved themselves sterile by now...

Dave, the permission wouldn't be retroactive. The documentation would be.
Oh well, I'm not that interested.

For whether it was legal, Dave. That's what you and Ed's accusation of
bootlegging means.

> > It would appear that Len is correct. You do view the ARRL as a
> > quasi-governmental entity capable of authorizing amateur operations in
> > foreign countries. Wow.
>
> This is the part where you begin to be the real Brian.

I'm always the "real" Brian. I don't have to be someone else while I'm on
here because I don't work for the ARRL. Perhaps when Ed began charging that
I was a bootlegger was when the "real" Ed showed up.

You read
> something and draw an incorrect conclusion.

Dave, I'm free to make mistakes. Please correct me whenever I'm wrong.

The ARRL doesn't authorize
> operations.

Who authorizes operations in Somalia?

> The ARRL sponsors DXCC. The DXCC desk decides whether an

Yes, I understand all that.

Explain how you came to the conclusion that lack of DXCC approval means I
was bootlegging.

> > > > Are you still of the opinion that I took advantage of a poor country

> prove that anyone ever granted you permission to operate.

I don't have to prove anything, Dave. I was granted permission, and I operated. Legally.

Who requires "written authorization," by the way?

Yes, now that you've brought it to my attention that the DXCC desk probably doesn't recognize it for their credit, I wished I had know all the ins and outs of covering all the bases of operation in a country without a government.

If the DXCC desk doesn't like it, then fine. Its just another example of the ARRL not supporting one of its members. Again.

Mike, I think Len said that he thinks Steve sees good manners as a sign of
weakness.

Which brings us back to Jim, and him tsaying its not broke. But it was
broke when code examinations were reduced from three exams to one, and it
was broke when the license structure went from six to three. Remember, Jim
says we needed more license classes than 6.

I just wonder when this new, "its not broke" thinking came in.

Phil, is it any less easy for a VEC to give away the exact exam?

The government spends money on all kinds of stupid things. Lots of it. I
think the government spending money examining the people they issue licenses
to is not a stupid thing.

> In a sense, does it really require more knowledge to operate SSB on
14.157KHz

Phil, your beloved ARRL has this to say about operations in Somalia:

Somalia (T5)
At this time to operate in Somolia you would need permission from the United
Nations or your military commander.

There is no IARU-member society.

Additionally, your beloved ARRL DXCC desk has accepted fro credit other military members who have operated from Somalia under the same conditions.

Take it up with them.

I combed the old print callbook for unused W x 2 callsigns I liked,
prioritized them per FCC instructions on the form and got my #2
choice. A guy ahead of me in the line into the Gettysburg Office when
that window for 1 x 2s opened glomed W3RU which was my first choice.
Nutty game but no complaints here either.

OK. I accept that.

Sure, your motives are pure, and your conscience is clear- you
> di-dit "your way" HA! and that's all that matters - to you.

Why wouldn't it matter to me?

> But that and a couple bucks would get you a beer in the PX beer garden.

Those were the days.

No PX/BX in Somalia. No beer garden. Moslem country - no alcohol. Hell, I
couldn't even get replacement shaving cream or blades; had to bath with a
canteen and a dirty sock. Washed clothes in a dirty trash can.

The

Welp, its beyond me if, as they say, someone without a license can impact the ARS in any way, shape, or kind, why they have to damn you at every opportunity, suggest you are harming them, and on and on and on.

Either free citizens can petition their government or they cannot.

Lets see what they say.

But Dave, you know that your cronies are not content with the present
system. They WISHED it were the same old way, and they WISHED the newer
folks would have to prove themselves under that old system. Since the newer
folks DON'T have to prove themselves under the old system, the old guard
reject the newer amateurs as uworthy.

First The Putz babbles on about military operating authorization
policies which have nothing at all to do with ham radio then he's
stupid enough to diss Phil's pronouncements on ham licensing. He can't
even keep the thread straight, he's hitting new lows, desperation must
be hell.

But it does matter. The FCC specifically asked for comments. Len gave
comments, but according to you and the rest of your Cronies, he was wrong to
do so. You guys keep saying that he has no voice in amateur radio, then Jim
says he harms amateur radio. Which is it?

You guys need to grab a box of seegars, a gallon of ten-high, and head up to
Newington and get Len taken care of. I'm sure you can get an official
proclamation in the next newsletter.

Len is
> still afforded the opportunity to obtain an amateur radio license. His

And if Len were to approach Jim Maxwell with a comment or idea, do you think Jim would say, "Sorry, but you're not an ARRL member, and you're not a ham. I'm just not going to listen to you."

> I even have a license issued by the FCC which permits my
> operation on the ham bands. Len is 0-for-2.

Len is a citizen. He has the right to petition his government. He also has the right to post his opinions here - that is until you close the group to non-amateurs.

Then Larry wouldn't be able to slam all the newbies that have come on here asking information about licensing.

Not true, the ARRL expends time, money, and other resources to non-amateurs.
Its called recruitment.

Dave, hypothetically, if Len were to obtain an amateur license and join the
ARRL, would you give his comments equal weight as those of Jim's?

I'll assume that you are employed in the aviation industry with your aeronautical degree. And I'll assume that you are relatively well compensated for your efforts, both in attaining a degree in aeronautical engineering, and in the industry.

I am not permitted to be compensated for whatever effort I expend learning the material for the license, nor for my radio activities afterward. Now there is no requirement in any service, except the ARS, to learn Morse code. And those other services can put money in your pocket. Why must the ARS retain this now arbitrary exam?

This is the difference between arbitrary "requirements" in academia, and amateur radio.

73, Brian

The hang gliders use a variation on that. Their national organization
holds a license for a zillion base stations and 20 zillion mobiles on
some vhf FM freq which is not in the airband.

This one wasn't bright or wonderful. It is apparent that it was
different.
You don't *have* to prove to me that you had authorization to operate.
You don't have to prove it to the DXCC desk. You don't have to prove it
to those you worked and QSL'd. On the other hand, none of us has to
believe you.

Dave K8MN

Without a license or other document produced by someone in having the
authority to grant permission to operate, it flatly wasn't legal. You
are the person who seemed confused by the role of the DXCC desk. I was
clear on that role all along.

You've already stated that several times. You can add the government of
Somalia whenever the country forms one. Any of those forms of
permission will be in writing.

> > The ARRL sponsors DXCC. The DXCC desk decides whether an

Lack of DXCC approval doesn't necessarily indicate bootlegging. Lack of
written permission from an entity authorized to grant it indicates that
you were bootlegging.

> > > > > Are you still of the opinion that I took advantage of a poor country

>
> And amateur operation by military members in Somalia was not forbidden.

Not forbidden does not indicate blanket approval. You have no proof of
any kind that you had such permission.

> > > Too bad about there being an existing government that refused to issue

>
> Standing up or lying down?

From what I gather, lying down was okay. Dancing while standing and
while music was playing was judge, by the government of Vietnam to be
something too frivolous for a country at war.
>
> > I wonder why that was.
>

So you say.

> Who requires "written authorization," by the way?

All countries require written authorization.

> Yes, now that you've brought it to my attention that the DXCC desk probably
> doesn't recognize it for their credit, I wished I had know all the ins and
> outs of covering all the bases of operation in a country without a
> government.

The same things apply to countries *with* governments. Someone who has authority to grant amateur radio operation issues the permission (in writing).

> If the DXCC desk doesn't like it, then fine. Its just another example of
> the ARRL not supporting one of its members. Again.

You'd like special DXCC rules for the unenlightened?

Every country which recognizes amateur radio operation has a written
form of license. The U.N. issues written authorization. The U.S.
military issues written authorization. Where is yours?

Here's your brick, Brian: If you don't have written authorization to
back up your claim of permission to operate, you were nothing more than
a bootlegger.
You prior claim to high ethics and morality in amateur radio ring
hollow.

I don't have a problem. I didn't work you and was busy handing out QSOs
from Botswana during the time you were there. The DXCC desk doesn't
have a problem.
They couldn't care less if you can't submit documentation because you
never gave a thought that you might need it. The people who contacted
you thinking that they'd receive DXCC credit for Somalia--now THEY have
a problem.

When she's imitating Kenny Burrell, she plays the guitar. Kenny doesn't
sing.

I don't reject newer amateurs as unworthy. They pass the only exams which are there for them. As far as WISHING, don't you WISH the code exam had gone away totally? I've told you before, I don't have any cronies. All that aside, my statement to Leonard H. is filled with truth.

>I'll assume that you are employed in the aviation industry with your
>aeronautical degree.

Nope, peace broke out all over the world with the fall of the Soviet Union. While one could get a job that paid relatively well, the job security was for the birds...no matter how competent you were. So I turned to MIS and am currently a Systems Programmer Analyst. I'm happy to say that I've been with the company for 13 years now. (A lifetime by today's standards.) But then again, I've just witnessed a layoff of guys with 25 year OTJ. :-((But at least they respect performance over seniority, and that's all I ask for.)

>And I'll assume that you are relatively well
>compensated for your efforts, both in attaining a degree in aeronautical
>engineering, and in the industry.

I do ok. (blush mode = on)

>I am not permitted to be compensated for whatever effort I expend learning
>the material for the license, nor for my radio activities afterward.

I suppose it depends on what you mean by "compensated." If you mean monetarily by a third party, such as an employer or a client, you're quite correct. I (and I suspect you too) am compensated each and every day I operate on HF, whether by phone or CW. Doesn't mean I have to like CW. (Which I do, BTW.) All it means is that I met the requirements to attain the privileges to allow me to enjoy the aspects of the hobby that I do like, operating on HF.

>Now
>there is no requirement in any service, except the ARS, to learn Morse code.

The ARS is unique.

>And those other services can put money in your pocket. Why must the ARS
>retain this now arbitrary exam?

Because it's more than just a service or a hobby...it's a culture deeply rooted in tradition. Communicating via Morse code happens to be one of them. I wonder if we'd se such an outcry if the older hams had to pass a test on one of the newer digital modes in order to renew their tickets. I doubt it. They'd probably just buckle down a "get it done," whether they planned to utilize it or not. It's an entirely different mindset. Some might even call it a work ethic. A work ethic need not only apply to monetarily compensated activities. The porch needs to be painted. Either you get off your duff and paint it...or you allow it to deteriorate. Your "work ethic" determines which action, or lack thereof, you choose.

>This is the difference between arbitrary "requirements" in academia, and
>amateur radio.

I appreciate that, but if you check the thread...it wasn't my analogy. I just picked up the ball and ran with it, so to speak. Take it easy, Brian.

```

He commented. His comments were accepted by the Commission. Len is not
a part of amateur radio and in fact seems very negative toward it and
toward the ARRL.
Why a non-participant would continue to haunt an amateur radio newsgroup
for years and years and never attempt to obtain an amateur radio license
baffles me.

> You guys need to grab a box of seegars, a gallon of ten-high, and head up to

> Problem??? IS it a problem? I don't see it as a problem. Why do you?

If Len wants an amateur radio license and takes no steps toward
obtaining one, it is a problem *for him*. It isn't a problem for me. I
personally don't care if Leonard H. obtains a license or not. On second
thought, I'm personally a bit happier if he does not choose to join the
ranks of licensed hams.

Not necessarily. You have an amateur license. I don't give your
comments the same weight I give Jim's.

>
> Have you seen the prices that unbuilt heath gear can command...???
> Whew!

The current record that I know of is $5100 (not a typo - five thousand one hundred dollars) paid for an unbuilt Heathkit AT-1 on eBay. Rig was one of the last AT-1s made, dated 1956 and still in the original unopened box.

Of course the electrolytics are prolly all dried out and the carbon comp resistors have prolly drifted way high in value, but it's all there. The capper is that the AT-1 was a very poorly designed rig for its time.

If I ever wanted an HW-16, I'd just buy up a junker or two, tear them down, check all the parts, replace anything questionable and rebuild. Then enjoy.

>that crap.

If it was the only way to a rare one on 60 meters, I'd bet you'd use it. (So would I!) And wave the card under fellow FRC's noses. HAW!!

But here's the important point: Almost any ham gear made in the past 40-50 years can still be used legally on the ham bands by those with the proper license and know-how. And except for a few rare items the stuff costs far less in inflation-adjusted dollars than it ever did.

Example: Want to use a 75A-4 again? A nice one can be had for about the same dollars as it cost in '58. Which means that adjusted for inflation it costs about as much as your old S-40.

Or pick up an FT-897 for about the same price. Or any of dozens of rigs from the eras in-between.

More choices than ever. Pretty good for a 'dying' ARS, huh? Know what makes all that modern gear so inexpensive? PLCs, for one thing.

Anyone who operates an amateur radio station without the proper license and authorization to do so is bootlegging, i.e., operatin illegally. By definition. You claim to have operated an amateur radio station under conditions where it is clear you did not have the proper authorization. Connect the dots.

Verbal permission from your CO is not, repeat not, proper authorization. That's not just my interpretation, either.

The situation is somewhat analogous to the case of the person who talks of driving 55 mph in a 25 mph construction zone 10 years ago, then claims it was 'legal' because somebody in a hard hat told them it was OK.

Will anything be done about that bootleg operation? Probably not, because: it was a long time ago and there is no real hard evidence, anyway. By hard evidence I mean things like times and dates of operation, stations contacted, bands used, audio tapes of the operation, etc.

Which brings up an interesting point: Nobody seems to have ever heard of this operation except you, and you don't give any details. Maybe it happened, maybe it didn't.

But if you want the DX community to recognize and appreciate that alleged operation, you have to meet the DX community's standards. And by the DX community's standards, your alleged operation would be called illegal, as in 'bootleg'.

That's all I have to say to a bootlegger.

Jim, N2EY

Anyone can find some "papers" by KH2D on various web sites, even today. His rage and vitriol against 6 meters for any amateur use is a minor classic of one-sided opinion. Weirdly interesting considering it was written when KH2D was rather isolated in the middle of the Pacific. :-)

It takes absolutely no Nostradamus talent to predict his response.

It would be a scathing commentary on "lack of amateur experience"
still compared with his boasts of tenure in amateur radio. He would
salt that with denigrations of being a "beginner" and not the mighty
long-timer superior in radio that he would claim.

The amount of vitriol spewed with hardened degratory comments
would vary only to the degree his own personal viewpoints were
opposed.

That's a no-brainer prediction. :-)

>Its called recruitment.

As part of its lobbying effort on amateur radio regulations, ARRL attempts to hold certain positions on GETTING INTO US amateur radio. Their long, long, absolute insistence on a morse code test to GET INTO amateur radio is one such example.

It's a nice quasi-paradox, almost an oxymoron. Voting ARRL members have ALREADY gotten into amateur radio, but ARRL wants to control regulations on getting into amateur radio by all those that may be interested...but are turned away by the code test. The only result of such is a membership which is composed of those who agree with ARRL positions.

It's called positive feedback as applied to self-definition of what ARRL movers and shakers think is good for amateur radio (themselves).

That's rather obvious but to voice such opinions invokes mighty rage and wrath of the believers, cultists, and life-stylers whose viewpoints are shaped and molded by ARRL. QED in here.

"Writing my director" is done in private. Since said director is part of ARRL and with ARRL controlling what communication is made public, such "director writing" might just as well be a written prayer paper stuffed into some wailing wall, then ignored and left to decay.

The FCC is obligated to make correspondence public, at least enough to be accessible at libraries in DC and Gettysburg by anyone going there during business hours (Part 1, Title 47 CFR). The FCC tends to make rather prominent public disclosure when citizens comment to their legal authorized elected officials (members of Congress) who, in turn, forward such things to the FCC. Several examples of such are in the 2600+ public document comments on NPRM 98-143.

All US citizens are automatically "members" of the USA and can go directly to our government with our comments. No "license" is required. No "in-between representatives" such as pretend-officials (directors) of a membership organization are required.

>I'm just not going to listen to you."

Mr. Maxwell is an FCC official? I know who my legally-elected
senators and representatives in Congress are. They must not
count for anything?

I'm supposed to have a "duly elected official," a "director"
in a membership organization as my ombudsman...an
in-betweener "official" between me and my government.

Puts a whole new light on the First Amendment of the US
Constitution.

>> I even have a license issued by the FCC which permits my

I've suggested that closure to a moderated newsgroup long ago
and just recently.

It wasn't desired. The de facto rule is to cow and denigrate all
having non-traditional, non-ARRL ideas by any means possible.
That insures a "proper" group-think.

It's the new "rule by force" method of the ancient's hood. :-)

>Then Larry wouldn't be able to slam all the newbies that have come on here
>asking information about licensing.

All bets are off on that one. I say he would continue his
mantra of conquering his personal whatsis to become the
great radio amateur he is today. Regardless of who posted
what where. Oh, yes, and the "dumbing down" of the tests
of today and all the incessant "whining" about making
changes. :-)

>Dave, I was legal. You say the DXCC desk won't accept that. Sounds like
>you and them have a problem.

They don't have any problem in their eyes. They redefine
everything to meet their own desires under the DXCC bar
rules (they hoist a few at the local bar to make those new
rules "legal").

If Judge Heil declares you a bootlegger, you are a bootlegger.
Never mind what ARRL has posted in regards to Somalia.

The law has spoken. :-)

No problem. They pretend to be creative. In that creation one has already called ME a "bootlegger!" [N2EY]

Very interesting double standard modified. They must think that operation of a cordless phone, cell phone, wireless door-bell, garage door opener, and remote temperature gauge transmitters are all "bootleg" things without an amateur radio license. Strange group.

Well, they DO make up new rules as time goes on... :-)

You went to Vietnam too?!? What branch, rank, unit?

Were you the sole radio person in a whole brigade "saving" them?

In those days he was Doctor Don Miller, MD, W9 something or other, world class DX champ. SOME of the time, as it turned out, he actually was where he said he was when handing out all those exotic DX contacts. Other times he evidently was far, far away from wherever. The criminal thing, it seems, came some time later. I disremember what it is he's serving that long sentence (life?) for, seems like it was conspiring to off his XYL.
You have to wonder if he didn't get started down the slippery slope in his DXing days.
But we know, Brian. You're not a deliberate illegal, just clueless.

And you know that how? You've already indicated that you didn't know how the others got their authority and approval that won acceptance from the DXCC desk. Now you do? Maybe they were astute enough to get it in writing. If they did, they did it under different conditions. You've said that it was your job to write plans. As you were a meteorologist that doesn't compute, but the military doesn't always use good sense. But you should understand the importance of good documentation. It's pretty well established here that you do not.

Really don't pay much attention over time, do you? I had a Conditional General, for which no credit beyond Novice was given when upgrading at the FCC office. So when I went to upgrade to Extra, I was required to take the 13wpm code test, writtens for General, Advanced and Extra, as well as the 20WPM code test. Which I did on a single visit. Since the FCC district office at Kansas City was 260 miles away and required an overnight stay, I made sure I was ready before making the trip.
Wasn't all that difficult. Much less so than nonstop whining about the requirements for the rest of my life.

But you can't prove it, and never could. Did you keep your commander close at hand to answer all inquiries for confirmation? Do you still? Did you ask him to issue a written document attesting? Did you explain to him what a ham radio station is, instead of just letting him assume you were another CBer which most non-hams automatically assume when someone mentions ham radio? Do you have ANY idea what this really involves? "Aw, what the hell, if anyone doesn't believe it that's their problem, not mine. I don't need no stinkin' documentation!"

>
>Lets see what they say.

Here's what one extra said -

==========

With a filthy rear area coward such as your self, Lennie? Someone who tried to insinutate that since HE was in the same unit as that of a lot of guys who were KIA three years prior to his arrival in-theater, that HE deserved some accolades for that service?

YOU have NO understanding of what "patriotism" is, Lennie. Never did...never will. You are the worst kind of coward...You hide behind the sacrifices that others made in order to make yourself look better....Sacrifices that included losing thier lives.

Does your wife know you do that?

==========

The chief driver of the putzmobile [K4YZ] wrote that in another public thread ("Service to the nation") in one of his usual fits of distemper. Doesn't matter which thread, the contents of the putzmobile driver's output tend to be the same in any thread.

It's the usual fabricated diatribe put out by those who cannot take debate or cannot win any perceived message points...almost always the long-time radio amateur.

So...there are charges of "bootlegging" levelled by more than one against you along with insinuations that I am "bootlegging" also. [Strange since I've never done that in the last half century]

Those fabricators must think they are following "good amateur practice" outside of the ham bands? They have rationales on such without limit...but it doesn't make amateur radio very attractive to enter and be in the company of such individuals.

I'd protest it to my "director" if I knew he/she would believe those fabrications. Probably not. I'd get advice to go out and buy "Now Your Talking" to "learn all about ham radio!" :-)

Hmmm...Radio Shack must have excised the chapter on name-calling and fabrications by already-licensed hams in that book. Well, that's a step forward by pretending it doesn't happen.

Beep, beep.

I've learned that you are no authority on operating from countries without
governments. I am 100% more experienced than you in that regard. And I did
it correctly. I asked permission. Permission was granted.

> Pardon my error.

Your many errors are pardoned. Next!

Hmmm. Better tell that to all the newly licensed who said they saw their call on the web.

But anyway, Somalia was an extraordinary situation, and I did what I what I knew. And that wasn't bootlegging.

> > If the DXCC desk doesn't like it, then fine. Its just another example of
> > the ARRL not supporting one of its members. Again.

Maybe not the first choice. I thought the Steve and Cutie Boy Episode, or was it the Steve and Mark Morgan Episode should have been first. But then Larry gave that newbie a good run for his money, too. I just dunno. There are so many good candidates here.

Remember the time I told Dick to go soak his hemoroids in kerosene? I tried so hard, but it just pales in comparison to the Masters of RRAP Hall of Shame.

OK Bert, your answer of "a culture deeply rooted tradition" pretty much sums
it up.

But that culture shouldn't use the government as an instrument to perpetuate
their good ole boy network.

Len, that's odd. While visiting Jim's shack, he had a 6M delta beam with
maybe ?20? elements pointed to the USA longpath.

Brian

See, Dave, that wasn't so hard, was it? I knew you had it in you.

You and Ed have each clearly made the accusation.

Now have you talked to the Somali War Lords about it? Have you brought it
up with the Judge Advocate?

Or are you just flapping your gums? Maybe if you flapped your arms and
squawked a little you would get some action.

DXCC Dave has told me so. Am I not to believe Dave?

> You've already indicated that you didn't know how the
> others got their authority

I know how one got his authority. He's the one who told me to get my
commander's permission. Which I did. Ten years later, I looked it up on
the ARRL web site for foreign operations, and its still the same
information. Gosh.

> and approval that won acceptance from the DXCC desk.

That I didn't know until Dave brought it up. I had to take something to the
ARRL in writing. Ooops.

> Now you do?

Now I do.

> Maybe they were astute enough to get it in writing. If they did,
> they did it under different conditions.

Permission is permission, Dick. You cannot change that.

The one I met with did have more experience at operating from austere
locations. He provided MWR calls home via MARS to his troops, and his ham
station was always on a pallet waiting for his chalk. Imagine that!

> You've said that it was your job to
> write plans. As you were a meteorologist that doesn't compute,

That's only because you know nothing about it. If you did know anything
about it you wouldn't say such foolish things.

but the military
> doesn't always use good sense.

Nor does Dick. Not even rarely.

> But you should understand the importance of good
> documentation. It's pretty well established here that you do not.

Sure, when I wanted someone to deploy, I would cut a tasking order and flow it to their Wing readiness office, they would cut the orders. That was in writing. It was kind of a big deal. Not at all like amateur radio. FWIW, I had to task myself to go to Somalia, then hit the base readiness office and try to get them to hurry the orders along so I could draw gear and a weapon.

It wasn't like the olden days where everyone moved as a single unit and went down to the pier and climbed on a troop ship so they could reduce the stockpile of old rations for weeks on end. We got airplanes today, and each deployment is tailored so as not to waste personnel, equipment, and supplies.

See Dick, other services move along with the times, not at all like amateur radio.

None. You construed a lack of DXCC blessing (which you're still guessing
at), with bootlegging.

That is only your opinion Dave. Meanwhile, I don't knowingly keep working out of band French ops on 6M. Its just not good amateur practice.

Dick, I had a clue. Another more experienced ham told me while I was over
there to get permission from my commander. I did. Ten years later I check
the ARRL web site for foreign operations from Somalia, and its still the
same good information that he gave me. Gosh.

Another experienced ham, my commander, me, and the ARRL all wrong? And Dick
has the clue?

Hardly.

code
> test.

Yes, but with your love of code and all that on-the-air experience working
other Novices and Conditionals on CW, you surely were way beyond 20wpm at
that point, Right?

> Which I did on a single visit. Since the FCC district office at Kansas

Should have been a snap for you. I mean you expect all the new people to
know as much as you do after 50 years a ham and working in the industry. So
surely you knew then at least as much as you do today.

> Wasn't all that difficult.

See? I knew it would be a snap because you're just as smart then as you are
today.

Much less so than nonstop whining about the
> requirements for the rest of my life.

Yes, yes. You really need to stop whining about everyone else who had it
"easier" than you.

Dick, I caged my commander and have been feeding him stale MREs for the past decade waiting for the opportunity to trot him out for a DXCC dog and pony show. Unfortunately, he just passed away from malaria contracted while in Somalia. I'm forever screwed because I didn't have him write it down. Oh the agony.

Squawk, squawk.

Do you sing like her when your imitating her playing Kenny?

Legion, Post 283, Pickerington Ohio, and VFW, Post 4183 Scott AFB, Illinois.
I've got it in writing. ;^)

Anyone else belong to service posts?

Dick you really broad brush everything. Be specific and maybe someone,
somewhere will understand what it is you are trying to get out.

Really? Now where are my logs?

> Which brings up an interesting point: Nobody seems to have ever heard of
this
> operation except you, and you don't give any details. Maybe it happened,
maybe
> it didn't.

It was called, "Operation Restore Hope." It made the news.

> But if you want the DX community to recognize and appreciate that alleged
> operation, you have to meet the DX community's standards. And by the DX
> community's standards, your alleged operation would be called illegal, as
in
> 'bootleg'.

Actually, Jim, the DX community has no authority to call it illegal. They
may accept it for DXCC credit, or they may not, but they have no authority
to declare it illegal. The government of Somalia can. What have they told
you?

Please, please. Prove me wrong. Citations please. Correspondence with a
War Lord. Grunts by a khat chewing, AK carrying Technical at the K4 traffic
circle. Anything. Anything at all.

> That's all I have to say to a bootlegger.

Oh, I'm sure you'll say more to me.

You must have missed Dick Carrol/W0EX being negative about the ARRL,
quitting the ARRL, and quitting the VEC.

Hmmm. Anyone else out there ever say anything bad about the ARRL?

Seems one RRAPper didn't like the ARRL trimming on the minutes. Lemmme
think for a minute. Who was that?

Meanwhile, there are lots and lots of people on here highly negative about
amateur radio. I don't seee much discourse between you and them. Why only
Len?

Because he makes good points that you don't like.

> Why a non-participant would continue to haunt an amateur radio newsgroup

On the one hand, you don't want Len voicing his opinions because he's not a ham. On the other hand, you don't want Len to get a license. Sounds personal. Have you ever met Len?

> > > > > > You have to be a ham to be able to respond to a government agency

```

So Len needn't obtain a license for you to continue to disagree with him.

So why do you continue to worry about why a guy without a license is interested in amateur radio?

In article <3D73B64C.AF148CC1@townsqr.com>, Dick Carroll <dixie@townsqr.com>
writes:

>> Ask anyone who
>> remembers Don Miller.
>>
>> The criminal?
>
> In those days he was Doctor Don Miller, MD, W9 something or other, world
>class DX champ.

W9WNV

>SOME of the time, as it turned out, he actually was where he said
>he was when handing out all those exotic DX contacts. Other times he evidently
>was far, far away from wherever.

Yup.

On February 19, 1968, W9WNV sued the ARRL and its General Manager in federal district court in San Francisco. (United States District Court for the Northern District of California, Civil Action File No. 48726)

He clamed defamation and wanted damages of $550,000 . The claim was that ARRL Awards Committee's denial of DXCC credit for various alleged DX operations was the source of the claimed defamation.

But in sworn depositions, Dr. Miller admitted that his operations were not as he had claimed. Here's a quick summary of the denied operations:

Navassa Island, 1966 (Not Authorized To Operate There)

W9WNV claimed to have operated from Navassa in the fall of 1966. Such operation required Coast Guard authorization, which he did not obtain. A letter which W9WNV claimed as authorizing the operation turned out to be a forgery.

St. Peter & Paul Rocks, 1966 (Wasn't Even There)

W9WNV claimed to have operated PY0XA from the Rocks in August, 1966. But in sworn depositions he admitted that the PY0XA operations actually took place from a vessel within sight of the South American coast near Trinidad - about 1800 miles from the Rocks.

Laccadive Islands (Not Authorized To Operate There)

W9WNV claimed to have operated VU2WNV from the Laccadives in January, 1967. But the Indian government confirmed that amateur operation in the Laccadive Islands was not allowed for anyone, and the license issued to W9WNV only authorized

operation in Bombay. A letter that W9WNV claimed as authorization turned out to be a forgery, and the Indian authorities confirmed that he was never in the Laccadive Islands at all.

Chagos (Probably Wasn't Even There)

W9WNV claimed to have operated VQ9AA/c from the Chagos in January, 1967, as a stop enroute to the Laccadive Islands rom the Seychelles. Direction finding and signal reception by local amateurs in the Seychelles showed the VQ9AA/c signals to be coming from the wrong direction, and without any day/night variation, as would be expected over the 1000 mile path from the Seychelles to Chagos. In addition, the trimaran used by W9WNV was much too slow to have covered the necessary distance in the time claimed. Although W9WNV claimed to have changed vessels, he could not provide credible details of how he actually got to Chagos.

Heard Island (Not Authorized To Operate And Probably Wasn't Even There)

W9WNV claimed to have operated VK2ADY/0 from the Heard Island in July, 1966. But the Australian government confirmed that the VK2ADY license was only good for operation in New South Wales. The Australian government also stated that they had denied a request by W9WNV for authorization to land on Heard Island because he was unable to demonstrate adequate arrangements to land and operate there. There was no evidence that W9WNV ever reached Heard Island, nor operated from there.

The suit was dismissed with prejudice by Dr. Miller in June, 1968, as a result of the depositions. (In plain English, he gave up because it was obvious he was not telling the truth). No damages were paid.

>The criminal thing, it seems, came some time
>later. I disremember what it is he's serving that long sentence (life?) for, seems
>like it was conspiring to off his XYL.

That's how I remember it. He's still in jail, last I heard. I think the callsign may be available through the vanity program, too.

That's one of the biggest reasons the FCC will be tough to convince. And
besides the $$ to do the actual testing, they'll need more $$ to create an
entirely new pool of tests, and more $$ to enforce keeping them secret.

All of which is one of the main reasons (I think) they went the VEC/QPC route
almost 20 years ago.
>
>In a sense, does it really require more knowledge to operate SSB on 14.157KHz
>vs 14.327KHz?

About as much more as it takes to work CW on 7005 as opposed to 7050.

>The only real reason for having subbands for higher licenses
>is that your frequency you're using is easily determined by a remote FCC
>site.
>They can't easily tell how much power, maybe you're using a beam aimed
>at them....

'zactly. Plus high power is not an incentive for the ham who cannot afford or
doesn't want high power. Plus the most desirable bandspace is reserved for
those who have demonstrated the most knowledge and skills.

Fun facts: One of the reasons I went for the Extra back in 1970 was that it was
cheaper to get the license than to build a 25 kHz calibrator.

Another reason was that I thought FCC would make the tests for Extra tougher as
time went on.

I was right about the calibrator.

OH, so what WERE those hams doing for the month(s) after 9/11 while they
were passing traffic
for New York City EOC if they weren't providing a service? What were those
hams doing out west providing backup comms for the firefighting efforts in
Colorado and New Mexico if they were
not providing a service? Were they playing around with their radios for
their own benefit, or were they working and sweating so that firefighters
could be on the line where they were needed instead
of operating radios?

And, by the way, I don't really care.

Nope. It's the opinion of every knowledgeable ham who has weighed in on the subject, including a former FCC district director to whom it is more than just an opinion-it's a legal interpretertation of the international rules. Note that he is also an attorney, which also seems to mean nothing to you.
That you don't like it and continue to defend is no surprise. You're well known for defending the indefensible.

> Meanwhile, I don't knowingly keep working
> out of band French ops on 6M.

Yeah, we know, you keep an updated library of the amateur radio rules of all nations and always refer to it before answering DX CQ's. Right.

> Its just not good amateur practice.

We know you're very short on that. You have very little practice. Seems much you do have was unauthorized.

Gee. YOU put it all in writing. Strange, why didn't you just tell them verbally
and expect everyone involved to take their word for it? Worked fine on your
Somolia operation, no stinkin' documentation needed.
You're nothing if not inconsistant.

>
> See Dick, other services move along with the times, not at all like amateur

I was at the Shelby Hamfest all last week, and I saw plenty of young hams 15
years or less of age.
One particular young fella was 14, very bright, very enthusiastic, and very
intelligent. Very hand-
some, he was certainly not the "geek" that some would like to have others
believe are representa-
tive of ham radio. Then there was a young girl that stopped by my tailgate
tent all of 9 years old
and a General. Her 11 y/o brother was a new Technician. Neither of them
looked "geeky". Just
normal, bright, curious kids that followed in their Dad's (and Mom's)

footsteps. Only those who
look from the outside in think Amateur Radio is dying.

> has the clue?

That's about it, Pal. If you'd asked your "other experienced ham" I'll wager he had it on paper, not just a verbal "go ahead". Otherwise he was as wrong as you. That he didn't mention that detail is no excuse for you not knowing. You were supposed to be a big boy. Normal persons in any setting know that's the only way to avoid "he said, she said" confusion and misunderstanding. Documentation details your "permission". What were the limits of your license grant from your commander? They should have been spelled out for you-on paper.. You'll never convince me your commander knew the difference between ham radio and CB. Most wouldn't. He may well have thought you were just going to run a few channels. Maybe you even wanted him to think that for all we know. Paper eliminates any question. You didn't have it on paper, so you'll forever have the questions. That's life. And the reason for documentation.

You might as well get used to the fact- no documentation, no valid permission. No valid permission, no license. No license, you're a bootlegger.

I think the Literature requirement in your Aero Eng degree was just as
pointless, actually. Being from the UK, I didn't have to study English Lit
to get an EE degree. I had to do Mathematics, Economics and Finance for
credit as well as Programming, Engineering Drawing and various other stuff
including Technical Writing that were not for credit. None of these things
seem irrelevant to me, but English Literature? I'm nothing if not
consistent, and I think that's just as crazy as CW testing of 'phone

operators, if not more so.

Snipped....Not one word of the cited post made reference to who can
petition the government and who can't...but I guess Lennie had to do SOMETHING
to blunt the acidic but otherwise truthful comments I made.

Sucks to be Lennie.

Also notice that you snipped out YOUR comments from the cited post, only
reciting my comments out of context.

So very blatant...so very "you".

>It's the usual fabricated diatribe put out by those who cannot take
> debate or cannot win any perceived message points...almost
> always the long-time radio amateur.

The onlything "fabricated", Lennie, is your assertions of
"professionalism" and your war record. What a cowardly piece of work.

Again.

G'nite, Your Putziness.

Now I understand the problem Burkie. The ARRL requirement for written
documentation of authorization to operate in a foreign entitity for
DXCC credit has ONLY been around since 1945 or so.

Ha ha ha, you must not have wandered very far from your
"tailgate tent." The rest of the Shelby hamfest was populated by
the ususal ham weirdos with pot bellies, call signs pasted all over
their cars, trucks, hats, filthy shirts, drinking beer and booze and
stuffing their fat faces with junk food. All the time bitching about
how the "bands" are being ruined by new operators. Seemed the
only normal people I saw were the truckers buying marine radios
for their long-haul rigs. hahahahahahahahahahahahahahah
pot-kettle-black

You're stuff is starting to read like some sort of Mark Morgan masochism
primer. Do you have some overwhelming desire for public humiliation?
You have no documentation whatever for your proclaimed operation from
Somalia. No goober would expect anyone to believe based on "that guy
over there said it was okay".

Strike One! You have no documentation whatever which can prove your
claim.

> You
> > are the person who seemed confused by the role of the DXCC desk. I was
> > clear on that role all along.
>
> You absolutely were not. When asked, you couldn't tell me the first thing
> about it.

Strike Two! The first thing about it which I told you is that the DXCC
desk decides which operations are accredited. I even suggested (on
numerous occasions) that you contact the desk.

> > > > > It would appear that Len is correct. You do view the ARRL as a

Strike Three! Your school material on "operating from countries without governments" is apparently: a) ask some guy if it is okay, b) get a radio, c) operate. You are the only fellow I know of who believes that having some sort of written documentation is not necessary.

> > Pardon my error.
>

> you fill your log book with lies?

You've claimed to be a DXer. How can you say that you never got into
"the DXCC groove" (whatever that is)? If you hadn't proper
documentation for operating from Somalia, you entire log book is a lie.

> Dave, if this really bothers you, please turn me in to the Department of
> Defence attorneys and have me Court Martialled under the UCMJ.

It's a little late for that, Brian. You got away with one.

> Taking advantage of a poor country, war crimes, something, anything.
>
> Otherwise, you're just flapping your gums.

No, I'm typing with my fingers. You are the one who can provide no
proof of being authorized to operate on the ham bands from Somalia.

Yup, that practice went back to the old Class A days.

> Which I did on a single visit.

Four code tests (two sending, two receiving) and three writtens.

>Since the FCC district office at Kansas
>City was 260 miles away and required an overnight stay, I made sure I was
>ready before making the trip.

As did many of us. There was also the '30 day wait to retest' rule.

In my case, the FCC office was only a subway ride away. But the tests were only
given on Mondays and Wednesdays, 8 AM, which meant waiting for summer vacation
or the rare day when school was out but Federal offices were open. Skipping
school for a ham radio purpose was simply not allowed.

End result was the same: Anyone with sense went to the actual exam very
prepared.

> Wasn't all that difficult.

Yup. In fact, when I passed the General (summer of 1968, 14 years old), the
FCC examiner said 'why not try the Advanced while you're here?'. One did not
say 'no' to The Man, so I did, and passed easily even though I hadn't even
thought of the Advanced (there were no additional CW privs granted with an
Advanced, so it made little difference to me).

I disagree. Should 'Son of Bash' appear, FCC could prosecute him. But doing so
would mean there would need to be rules governing the handling of the tests,
and enforcement action against violators. More work for FCC.

>The internet has made
>it extremely easy to distribute materials without
>any oversight from government, etc.

But the material would have to be gathered in the first place. FCC field people knew what Bash was doing and how he was doing it, but the top dogs refused to do anything about Bash's activities. That would have to change. More $$

>
>That being the case, and I agree that the FCC wouldn't
>buy into such an argument anyway...then what else can
>or should be done?

The steps we've already agreed on, such as increasing the size of the question pool, number of distractors, grading methods, etc. In other words, focus on things that can be done under the present system, rather than things that have virtually no chance of becoming reality. The key question: "Will it cost FCC more $$?"

--

Over the past 25 years or so, the requirements for an amateur license have slowly but steadily made easier. Whether that's a good thing or a bad thing is another question. But it's clear that the FCC thinks easier requirements are a good thing.

--

FCC testing could also create an access problem unless specific steps were taken. The classic "test at the FCC office" situation often required lots of travel, taking off work, etc. This was cured in the '70s by the FCC travelin road show operations, but such things today would require - you guessed it - more $$.

And it's questionable that FCC could afford to provide the ease of access that the VEC/QPC system does. Result could be fewer new hams simply because prospective amateurs couldn't get to a test session.

It doesn't need to be on a form. My license for operation from J5 is
typed on a manual typewriter on letter stock.

No, I repeatedly asked you about whether your permission was in
writing. Finally, you admitted that you had nothing in writing.

Based on your lack of amateur radio documentation, you'll forever be
known as Mogadishu Slim.

No, Brian, that is the opinion of a number of posters here. You are the only "DXer" I've encountered who does not believe that written documentation of licensing is necessary. It would appear that you do not hold the credentials to make a judgement on what constitutes good amateur practice.

We have only your claim that you made QSOs from Somalia. We have only
your claim that you have had no complaints. We have only your claim
that you had permission to operate from T5.

> Except from you. So what are you doing about it? Squawking?
```

What am I doing about it? I'm exposing your claims of ethical and moral superiority as a sham.

Interested in amateur radio? He's been posting here for years and has
professed a decades long interest. He's the slowest guy out of the
blocks I've ever encountered. If he was interested in becoming a ham,
he'd have done it by now. His interest is an amateur radio newsgroup.

N2EY wrote:

> End result was the same: Anyone with sense went to the actual exam very
> prepared.

As a longtime VE I regularly saw cases where the applicant
showed up with little or maybe
even no preparation for the test, and just gambled on "luck"
to get a test that he
could guess his way into passing. After all, it only cost a
few bucks and there
wasn't much travel or inconvenience involved. Some showed up
every test session
until they did indeed pass after guessing their way through
failure numerous times.
Even the code tests were multiple choice and if one could
copy any code at all
sometimes they could figure out many of the correct answers,
sometimes enough to
pass.

Made the job of the VEs more difficult because you had to
track which tests the
applicant had already taken and failed, since the rules
stipulated we not give him the same test twice. We had
to keep a file on each applicant who failed a test for that
reason.

Maybe none of this is a problem but it sure doesn't do
much to enhance ones view
of testing. And I know there have been some improvements
since that time.

>sent 1.2 million messages while serving as a rear area radio clerk, Lennie?
>You know...while serving in the unit that had all the KIA's that made YOU a
>hero...???

The driver of the putzmobile is fabricating lies again...or still.

I never claimed an "war record." My military service was from
March, 1952 to April, 1960. I have an Honorable Discharge from
US Army service. My ASN was RA 16 408 336. My MOS was
281.6, microwave radio relay operation and maintenance
supervisor (old numbering system, the decimal indicating status,
supervisory status eligible by enlisted grades E5 or higher).
That was NOT some "clerk" task as stated several times by
this driver and others. Army station ADA carried message traffic
at an approximate rate of 220,000 per month in 1955.

My longest military assignment was with the Far East Command
Signal Service Battalion, 8235th Army Unit, that AU attached
directly in support of Far East Command Headquarters in
Tokyo, Japan, to provide signal services for the FEC Hq.
The active phase of the Korean War lasted from June, 1950,
to July, 1953, the latter date the beginning of the truce period
which continues to this day (the Korean War never officially
ended). Twenty-three members of the 8235th AU died in the
first two weeks of the Korean War; Hardy Barracks, the billet
for most companies of the 8235th, is named in honor of one of
those killed. The 8235th AU received two Presidential Unit
Citations for excellence in signal activities.

Eugene Rosenbaum, N2JTV, was assigned to C Company,
FEC Sig Svc Bn, at the same time that I was and can confirm
details of the Battalion and communications tasks. The number
of messages sent over ADA was published in the US Army
Times late in 1955 and also the battalion monthly newsletter.
The other details concerning the 8235th AU are found in US
Army Signal Corps history.

My employment record is three radio broadcast stations and
one TV broadcast station, as signed off on my first First Class

Radiotelephone license certificate by their respective chief engineers (a scan of which the driver refuses to view). In California that employment includes Hughes Aircraft Company (twice, first as senior electronics technician, much later as staff engineer), Ramo-Wooldridge Corporation, Micro-Radionics Incorporated, Birtcher Instruments Division, Electro-Optical Systems (a Xerox division), RCA Electromagnetic and Aviation Systems Division of RCA Corporation, Teledyne Electronics division of Teledyne, Rocketdyne Division of Rockwell International (division now purchased by Boeing). The last seven corporate employers had me as an electronics engineer assigned to electronics circuit and systems design.

The above may be verified by personnel departments of the respective corporations. My clearances were Secret and verified by the FBI, DCAS, and the usual federal government agencies, all without any discrepancies. The federal IRS and California Franchise Tax Board have tax records of my employment at the above corporations. County clerk offices of Winnebago, IL, Ventura, CA, and Los Angeles, CA, have certified copies of my military records, FCC and FAA documents. Published electronics articles with my byline are available in archive copies of Ham Radio Magazine, McGraw-Hill's biweekly Electronics, Microcomputing, and Byte, among others. None of that is fabricated. All is verifiable.

For personal knowledge, W6MJN was best man at my wedding, KD6JG is a long-time engineering colleague going back 30 years, N2JTV was in my military unit at the same time 48 years ago.

The putzmobile driver's continuing assertion of lies and fabrications, along with cowardice in military service, is itself a lie and a personal insult. He should stop such senseless and unproductive statements.

> Again.
>
> G'nite, Your Putziness.

My apologies to all other readers for a lengthy recitation of service and employment, but the continuing lies, fabrications, and distortions of this individual and some others warrant one of these every three years.

Leonard H. Anderson

>say 'no' to The Man, so I did, and passed easily even though I hadn't even
>thought of the Advanced (there were no additional CW privs granted with an
>Advanced, so it made little difference to me).

Oh, my, "wasn't all that difficult?"

Of course not...yet you couldn't get a First Class Radiotelephone (commercial) by taking one additional written element?

When I took my First Phone in Chicago in 1956, nobody suggested "why not take the whole thing for a first class?" One stated what one was wanting to take and that was that. It wasn't "easy" nor was it all that difficult. The only problem that occurred was a fire drill throughout the whole federal building there in mid-test...only the building fire marshall was bossy about it. :-)

March in Chicago meant winter and a 90 mile train trip. There was no snow and I kept my shoes on throughout the trip. The only "uphill trudging" was up the front steps of the federal building.

Things must have been simpler in 1968, ey? You really didn't "need" a first phone, did you? A second class phone license was "good enough," yes? :-)

Beep, beep.

Perhaps I don't want to emulate Heil and become one of the "Brain-Dead
Old Farts" (definition of KH2D)? :-)

It would seem that the BDOFs think that all unlicensed (in amateur
radio) are "Clueless Newbies" (definition of KH2D) and must respect and
revere the words of the BDOFs while maintaining silence. They all seem
to deserve respect and admiration for merely existing.

Actually, Heil would seem to belong to a third Jim Kehler grouping, best
described here by initials DITWPIABUTDCF. [see http://kh2d.net under
Opinions, title Brain Dead] :-)

I've seen very little in the output of BDOFs (such as above) that would encourage anyone to partake in the hobby of US amateur radio. Their output in here seems to be little other than put-downs, degredations, insults heaped on others who don't agree with their sacred personal viewpoints. Not an encouragement at all.

Burkie oughta pick up Miller's callsign, they have the same "operating habits".

OH!? How do you account for the different addresses? It IS, after all, a
form letter sent as an initial warning. And, without being too "specific",
let's just say I knew this one was coming. You go right "ahaid" and "take
an ole stood by thar on that thar freeband thar, mercy me thar, shore
thang thar, gre't day thar". Those warnings to 10 and 12 meter bandits are
REAL, bud. Just ask
ole "Rabbit Ears" down in Fla. about the chains and leg irons, about the 15
month jail sentence, the
$25,000 fine. Ask him if those iron bars are real, or if those tears he
cried in court were real. He who laughs LAST laughs BEST!

Yup. There are resources out there that poor Brian never suspected. Ya gotta wonder where he was operating if the

other ham there knew nothing of him. Hiding behind closed doors?

>things that can be done under the present system, rather than things that have
>virtually no chance of becoming reality. The key question: "Will it cost FCC
>more $$?"

A return to old-style at-the-FCC-field-office testing will obviously impact the FCC budget. Remember that all commercial radio operator license testing

is also privatized (via COLEMs). There are more commercial licenses (and classes of same) now than three or four decades ago.

The radio regulatory task of the FCC is much larger now than it was two decades ago, more and different radio services now than ever before. Amateur radio has become a minority among all the different radio services as well as being a minority among all RF emitters. [the number of private vehicle (land, sea, or air) radio licenses exceed the number of licensed US radio amateurs by approximately 3:1]. One in five US citizens are cellular telephone subscribers, something that has far exceeded expectations of the entire electronics industry of a dozen years ago. With the explosion of cell phones has come a rapid expansion of cell sites, all of which must be regulated.

If the FCC were to drop privatization of radio amateur license testing and yet keep the privatization of commercial license testing, amateur radio must prove that it is more important to the nation than all other commercial radio services. Note: Privatization is done with common-band frequencies in commercial land radio (principally PLMRS), several

different industry groups handling that; the number of such assignments exceeds the number of amateur radio repeaters.

It should be rather obvious that discontinuing license/frequency privatization should increase the FCC budget, both in staffing and administrative costs.

>Over the past 25 years or so, the requirements for an amateur license have
>slowly but steadily made easier. Whether that's a good thing or a bad thing
>is another question. But it's clear that the FCC thinks easier requirements
are
>a good thing.

No one can know "what the FCC thinks" except by interpretation of published documents of the FCC...unless they are staffers within the FCC. Their statements on rule changes in Reports and Orders are "clear" only in what they used as criteria for establishing different items in R&Os. Nearly all statements in R&Os have footnotes indicating their reasons for rulings.

Improved radio-electronics technology within the last three decades has reduced monitoring needs for out-of-band operation, power output determination, or harmonic radiation of licensees, any radio service. Such needs have not disappeared, but they have been much reduced from improved commercial radio products. As a result of such improved-technology commercial radio products, the individual licensee technical knowledge doesn't have to be as great as before...and technology questions on licensing can be reduced. That is looking from the point of view of the FCC as a radio regulatory agency.

>FCC testing could also create an access problem unless specific steps were
>taken. The classic "test at the FCC office" situation often required lots of
>travel, taking off work, etc. This was cured in the '70s by the FCC travelin
>road show operations, but such things today would require - you guessed it -
>more $$.

One test session equals only one day spent for testing, at most.
. Based on urban centers as a present comparison of travel to an FCC office (assumed established in each), an approximate maximum travel distance is only about 150 miles, three and a half hours by car...slightly longer in the Rocky Mountain states and Alaska. Note: Center of population in the USA is moving steadily westward, having crossed the Mississippi decades ago.

The problem there is that few urban centers in the USA have FCC field offices now. To federalize license testing requires an opening of many more field offices to handle both commercial and amateur applicants.

>And it's questionable that FCC could afford to provide the ease of access
>that the VEC/QPC system does. Result could be fewer new hams simply because
>prospective amateurs couldn't get to a test session.

There is an alternative to this in combining shorter distance travel and a form of federal testing using secure Internet (as presently done for things like bank accounts). The federal end could be a single server holding the test forms, test questions (however randomized), scoring, and accept-reject notices to the user.

Individual terminals could be in any federal office with a computer and Internet access (very few do not have such). A staffer at each office need only handle identification of the applicant and whatever local paperwork is necessary. A menu and prompt from the server could supply the necessary direction for the staffer in each office. This might entail adding more terminals in a particular federal office but that is essentially a one-time cost plus maintenance, not the salary-plus-150%-burden cost of a human in addition to personnel testing and screening. At most, the federal office containing test terminals would need more space of about 40 to 50 square feet extra per terminal (with desk and chair).

With the server in control of test content and secure connections, privacy and secrecy is ensured. The only catastrophic condition might be server interruption or some temporary fault in the Internet connection. Server-terminal software could handle such outages without penalty to the license applicant.

Terminals handle both text and graphics with ease today. Multiple-choice test answers need only be a mouse click on a correct screen button. If morse code testing must be done in such a future system, there must be a system to verify direct copy of transmitted code. Not all applicants would be keyboard-familiar. Scanner OCR identification might be done but that is problematic with some hand-printing done under stress. The alternative there is for a local office staffer to read direct copy and verify it against the transmitted copy sent only to the staffer's terminal.

Such a system requires a different political arrangement between federal agencies to share services. Military bases would be no problem for limited-access to test terminals; the US military is heavy into Internet connection now. Other civil agencies might present a problem. However, all serve the same government so there would be no government level jurisdiction situations such as between federal and state or federal and local governments. Note: California state motor vehicle offices presently handle voter registration, a local county government function, so the inter-government situation already exists on a small scale without undue problems.

This compromise system involves very little budgetary increase for the federal government, utilizing the many different federal offices already existing without adding FCC field offices. It allows full secrecy of test questions under direct FCC control, federalizes license testing again, and may or may not remove the "public full answer" stigma that some attach to present-day

privatization. It would replace both COLEMs and VECs
except for the requirement to "understand" morse code for
commercial radiotelegraph license applicant's sending...that
could use adaptations of a few present-day morse decoders
working with noise-free circuits, but must be experimented
with under test system conditions for proper scoring relative
to older code test methods using an FCC field officer as the
"decoder."

Note again: S25.5 presently requires "sending by hand,
receiving by ear," but that refers to the test applicant. It does
not say anything about the code generation or decoding
method.

A simpler solution is to force the VEC QPC to generate and
distribute twice or even three times the present-day minimum
of 10 pool questions-and-answer sets.

For authorization.

None the less, they have no authority over Somalia, the US Air Force, nor my
commander.

> > > > > It would appear that Len is correct. You do view the ARRL as a

So? It is still 100% more experience than you've got. And I learn from my
mistakes. Yes, I should have had my commander's signature on some Form 1.

None-the-less, he did authorize it. It was legal.

> > > Pardon my error.

We were both there. His authorization was good until either he left or I
left. If he left first, it would be incumbent upon me to get permission
from the next commander. As it was, I was cut at day 47. He remained.

Thus, it was legal my entire stay in country.

No. But when a newly licensed amateur in the USA first sees his name and new call come up on the web, they get right on the radio. Paperwork comes in a few weeks later.

> > But anyway, Somalia was an extraordinary situation, and I did what I
what I
> > knew.
>
> I have no trouble believing that you did what you knew.

And you knew nothing about operating from a country w/o a government, just as you said, and you also said a commanders approval wouldn't do it, and on and on and on. Not only were you ignorant, but you were wrong. You admitted to ignorance, now its time to come home on being wrong.

Betcha can't do it.

> > And that wasn't bootlegging.
>
> I have a great deal of trouble believing this part.

Doesn't matter. That's the way it was.

DXCC groove = never applied to the DXCC desk for anything.

I just work DX and I've been DX. Sorry if that pisses you off.

> > Dave, if this really bothers you, please turn me in to the Department of
> > Defence attorneys and have me Court Martialled under the UCMJ.
>
> It's a little late for that, Brian. You got away with one.

No, no, no. I'll admit to everything I've said here. Go to the
authorities. We can get my deployed commander to testify. Unless he's died
from malaria or some other exotic disease.

Please, vindicate me.

> > Taking advantage of a poor country, war crimes, something, anything.

Dave, I have no proof that I was in Somalia either, nor do you. All of our
orders said Kenya for security purposes. Now how did those damned CNN
reporters show up on Mogadishu beach?

Prolly some State Dept. leak.

I certainly hope that you didn't derive "its none of your business"
from my comments. The ARRL web pages contain information
about the field organization. I asked you for some specific needs
you might have. I can't respond with specifics if I don't
know the circumstances.

Cheers,
Bill K2UNK

I have, although not recently. In doing so several years ago I'll
note that I was disappointed that not one of the 4 VEC entities
even acknowledged receipt of my suggestions.

Cheers,

Actually, stolen doesn't quite fit most government data.
WE, the public, paid for it and we the public own it. I've
never seen a copyright claim attached to any federal
documentation.

>>
>(Name & Callsigns withheld)
>>
>There ya are Burkie, doan bitch about the freebanders, you wuz one.

How is that verifiable if "name and callsigns are withheld?"

Are you or KF2TI journalists who feel free to use ambiguous "informed sources" as truth? I don't think so.

Some kind of "e-mail fan club" doesn't sound authentic for anything but ordinary libel spread around by others with some out of spite or are now afraid to come out in public forums.

Four years ago (or so) some loudmouth came in on an argument of military use of morse code, claiming "his son used CW behind military lines sending intel" during the Gulf War. After some several postings correcting him on what the US military really did use in 1991, he relented that it might be "mistaken."

In the quote above, can you verify that all those Yaesu equipments existed in the beginning of 1993? How did the "name and callsign withheld" individual get all that ham equipment into Somalia? What unit was this unknown with, what branch? How does only the antenna get "destroyed by machine gun fire" yet the radio equipment or unknown operator is untouched? Do you really think any machine gun could zero in so accurately to take out one thing, yet not touch the rest of the station?

"3500" phone patches at 5 minutes per patch would require about 38 days of 8 hour a day operation, most of a 3 month period of presumably military duty. That's questionable as some kind of special services equivalent entertainment in what was an essentially military zone which needed military comm for military needs using military equipment.

What you have there sounds suspiciously like yet-another fabrication...such as the "suddenly activated officer from under a NYC bridge mobilized after September 11, 2001" who appeared in here, without name or any other verifiable data to identify the person...except a traceback of header information, writing style, phrases, and cute little taglines exactly like another's.

Unless you can verify that quote, readers have to judge it as being yet-another fabrication of someone's imagination.

> a kind of noble deed.
>

Anderson, in another desperate attempt at misdirection to cover his lack of information, attempts to put words in my mouth. I didn't imply "service to the country" or "service to the community" in my message. I simply quoted a direct and unequivocal official statement made by the FCC. That statement is complete in itself, independent of the context of the correspondence.

"The Amateur Service is a radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs; that is, duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest. 47 C.F.R. 97.3(a)(5). Individual licensed stations are each part of this Service."

Deal with it.

Sorry, Lennie...I drive a Ford.

>I never claimed an "war record." My military service was from...(SNIP)

Yes you have and we know alllllllllll about yor service number, unit, and
what you have claimed as your "record".

>Eugene Rosenbaum, N2JTV, was assigned to C Company,
> FEC Sig Svc Bn, at the same time that I was and can confirm
> details of the Battalion and communications tasks.

I am sure he can. But who cares?

>The above may be verified by personnel departments of the
> respective corporations.

And not ONE IOTA of those "records" validate any "experience" in Amateur
Radio, nor do they qualify you for anything other than a pat on the back and an
offer of gratitude for having been there.

>For personal knowledge, W6MJN was best man at my
> wedding, KD6JG is a long-time engineering colleague
> going back 30 years, N2JTV was in my military unit at the
> same time 48 years ago.

And I bet you also have various ethnic "friends" that you allow yourself
to be seen in public with from time to time, Lennie, to avoid any
representation of "prejudice".

>The putzmobile driver's continuing assertion of lies and
> fabrications, along with cowardice in military service, is itself
> a lie and a personal insult. He should stop such senseless
> and unproductive statements.

Then YOU should stop making misrepresentations and stop making "hero by
association" stattements, Your Wimpiness. How about three months worth of "the
ARRL is dishonest" diatribe you've spouted? Still no "facts" forthcoming
there, Lennie.

>My apologies to all other readers for a lengthy recitation of
> service and employment, but the continuing lies, fabrications,

> and distortions of this individual and some others warrant one
> of these every three years.

No need apologizing, Lennie. It's a known fact that you take every opportunity to recite whatever you feel "supports" rantings, and we have come to expect it...We wouldn't know what to do with ourselves otherwise.

You should care very dearly. His words would put your writings
clearly in the LIE category when saying my military service was
"cowardly."

Gene is a long-time radio amateur, longer than you, for example.

You apparently don't want to verify a thing, to seek any truth,
just spit your LIES in here because they make you feel good.

You go right ahead and tell the Department of the Army and
the FBI that my military service was "cowardly." Let's see if
they will come around and arrest me.

> And not ONE IOTA of those "records" validate any "experience" in Amateur
>Radio, nor do they qualify you for anything other than a pat on the back and
an
>offer of gratitude for having been there.

Hypocritical little snit, aren't you? In one post you call my
military service "cowardice," now you want to "pat my back"
in some kind of "gratitude for having been there."

You've called my military service "cowardly." PROVE IT or
shut up.

> Then YOU should stop making misrepresentations and stop making "hero by
>association" stattements, Your Wimpiness. How about three months worth of
>"the ARRL is dishonest" diatribe you've spouted? Still no "facts" forthcoming

>there, Lennie.

Stick to the subject.

You've called my military service "cowardly." PROVE IT or
shut up.

You've written that my employment was not truthful, an
"allegation." PROVE THAT or shut up.

> No need apologizing, Lennie. It's a known fact that you take every
>opportunity to recite whatever you feel "supports" rantings, and we have come
>to expect it...We wouldn't know what to do with ourselves otherwise.

The "known facts" are that you will not accept anything I write
in here as any sort of truth, despite clear sources of verification.
You simply LIE and ACCUSE without any basis for truth or
verification.

PROVE your lies and false implications or SHUT UP.

PROVE that my military record was "cowardly."

PROVE that my listed employers are "lying" or that I never
worked for those I listed.

Too bad about attempting to show it is "independent." I quoted
the entire document to show that it was a correction of
Reliant Energy's use of the word "use" in trying to rip off Gerber.

>Deal with it.

I did. You didn't like the response. Too bad.

I hope that Ed Gerber doesn't get ripped off by Reliant Energy.
Don't you?

> If you're not part of the solution, you're part of the precipitate.

From 17 USC 105:

"Copyright protection under this title is not available for
any work of the United States Government, but the
United States Government is not precluded from
receiving and holding copyrights transferred to it by
assignment, bequest, or otherwise."

[United States Code Title 17 - Copyrights]

The word "work" used throughout Title 17 refers to
intellectual property such as original writing, art,
sound, recordings, etc.

The US government is essentially copyright free. An
example was found on many newsstands nationwide
under "J.K.Lasser's Income Tax" softbound books.
Lasser and his publisher photocopied whole pages of
the IRS rules, made a profit for years without paying
the government anything in copyright royalties.

ARRL can copy whole heaping gobs of Part 97 and not
have to pay anything in copyright royalties to the US
govrenment in their "FCC Rulebooks."

Free publication profit for all courtesy of the US Government
and Title 17, United States Code.

> equipment into Somalia?

It was shipped in with his stuff, on a pallet. At least in one case.
In 2 others, they brought it in with their gear. In total, 3 people
responded to my initial inquires as to the need for written
documentation to operate in Somalia during 1992-1993.

What unit was this unknown with,

Would that be kinda like you personally running 1.2 million RTTY patches
during your tour. Most phone patches are only a few minutes in length,
if that depending on the demand. MARS only allows 3 minutes max.

>

You're not doing a very good job. Time to step it up a little or go back to working out of banders on 6M.

By the way Len, I'd either get some new glasses or take a reading
comprehension course. No where did Jeff say he made 3500 phone patches.
He expressly stated 3500 contacts. Since he was running his station as
a DX operation when he had time, most contacts would be a quick 59(9),
name and qth and then QRZ and a good DX'er/contester can run quite a
high hourly rate if need be.

So we'll overlook the fact that in your haste to critique and critize on
matters not concerning you (as a non-ham), you made the obvious and
glaring error. Still looking for that proof of my so called names.
BTW, which are you today Lenof21, Averyfinman, or how many others have
you been. I've lost count

Thanks

Dave, there you are being inconsistent again.

In one sentence, you say I'm not a DXer then you say I am a DXer, albeit an
incompetent one.

But you're not even in my Somali log, so I'd say you're not the DXer you
give yourself credit to be.

Don't pout. You're still the World's Greatest DXer in my book (just not in my logs).

It would appear that Len is interested in all of radio. It was his career
after all.

If you were interested in bed pans and enema bags, I would just assume it
were just an extension of your nursing career, and not harangue you at every
opportunity.

I understood it. I just wanted you to make it plain so that even non-amateurs could understand it.

> > Now have you talked to the Somali War Lords about it? Have you brought it

> Time has passed. You got away with one.

Don't give up so easy.

I've got all my logs and orders and everything. I think I even have a picture around here somewhere.

I don't knowingly work out of banders on 6M, it that's what you're worried about.

Meanwhile, my operation from T5 is just as you'll find stated on the ARRL web site.

No, I had paper orders for Somalia in my pocket. I had one in each duffel
and my SWO kit. I had another with my pallet of TACMET and TACCOM.

Dave, I didn't say "supersedes," so why did you? You need to quit making stuff up.

You might lose credibility, Hi!

Really?

1945, huh?

They never asked for documention of my 1989 operation from Korea, nor my 2000-2001 operation from Guam.

> > See Dick, other services move along with the times, not at all like amateur

Good one!

I was issued a S&W model 15.

Traded it for an Mattel16A2 upon arrival.

No, you kept saying DXCC. And you kept saying my commander had no authority
to authorize my operation
(At this time to operate in Somolia[sic] you would need permission from the
United Nations or your military commander).

You simply cannot remember what you said. That's good for you because you
were wrong. No sense in two people remembering your mistakes.

Have him provide the ARRL with a little free attorneying: Update this from
theARRL web site:

"Somalia (T5) At this time to operate in Somolia[sic] you would need
permission from the United Nations or your military commander."

> That you don't like it and continue to defend is no surprise. You're well

No, Dick, I don't. But if a French ham were to directly tell me that the French 6M authorization began at 52 MHz, I'd surely stop working them on 50.125 MHz. Wouldn't you?

> > Its just not good amateur practice.
>
> We know you're very short on that. You have very little practice. Seems much
> you do have was unauthorized.

Don't tell me you're not in my Somalia logs either? You DX guys sure get POd when you miss one.

Steve, if it was true it would validate his longterm efforts to totally denigrate ham radio and all its participants, and to assist his search and destroy mission. Since it isn't, and he as well as everyone else nows it, your observation is exactly on the mark.

Dick

It just gets complicated. Freedom of religion - so, if you get some fanatical sect that believe in beating kids, it is very difficult to bring charges ... and others start getting a little bit upset over it (and, in my opinion, rightly so). So it is with freedom of speach. Does that give you the right to scream 'FIRE!' in a crowded theatre? And, what about slander? Of course, it would be nice if there was a nice clean line in the sand where everyone is happy if we all stay on one side of it and no one wants to cross that line - but the stupid winds keep shifting that line. Where do ya draw it? Do you draw the line at saying that 'F' word? What about live intercourse over the tv network? Some folks with kids might get a bit upset over that. Some folks even without kids might get a bit upset over that. Which brings us back to square one - where do you draw the line? The states even differ over this. In Florida, you'd best not get caught looking at the wrong websites. In Texas, - oh, forget Texas, I heard they just executed the last citizen.

;)

73 from Rochester, NY
Jim
ps - but it gives us something to rant about in the newsgroup. I just wish we could find something new to rant about.

Slim, you're almost as dense as Loose Lennie aka NoCwTesticles. I thought surely you'd be bright enough to at least see some light at the end of the tunnel and recognize it as an approaching freight. Your poor harried CO was as uninformed as you (I sure pity anyone unlucky enough to have been your CO), except you were the licensed ham and should have had some clue as to what sort of DOCUMENTATION was needed. If he knowingly authorized your operating verbally only he was in error, and you can't be excused just because you were also clueless. Ignorance is no defense, I'm sure you've heard that one before. So carry on in bliss, as the lately departed and unlamented Kim would. Your only support is the licenseless Lennie Loosegoose, and we know what that's worth. Nobody I know cares about your transgressions, other than it does make you look like a twofaced fool, given your ignorant tirade againstK8MN.

Ah, Steve putting out a fan letter? Bless him.

Brian, my operation was previous to this one. The marine who was there about the same time may have left by March as well. We shot for 90 day rotations, even though orders were cut for 180 days.

Like this individual, I did obtain permission from my commander. What puzzles me is why he obtained permission from the U.S. FCC as they have no licensing authority, to my knowledge, in Somalia, but they appear to have taken up the gauntlet and given their permission. I guess too much permission is better than not enough documentation. If some "higher" authority than a military commander would have been required, the UN was there aplenty.

And good work on the DXCC documentation. I'm amazed that he was able to do so much communicating with the FCC and ARRL from a deployed location. Though letters were sent to me, I never received mail in Somalia, but perhaps by March things were running better. It had to.

Wow. Sucks having your antenna shot down, but doesn't suprise me. You could hear gunfire day and night - but mostly all night. An R-7 would probably make stateside phone patches a little difficult, but it's compact and travels well.

I had no personal radio gear.

> 50.125 MHz. Wouldn't you?

If Dave did, under the same set of circumstances I likely would also. Do you
believe every rube who jumps in with instant "information"? Would you slam the
door on several hams you were in contact with just because another one showed up
on frequency and said they were wrong? He isn't just as wrong? Do you instantly
believe everything you're told? Hell, you won't believe you were not given valid
permission even when told it by such an authority on regulations as Phil Kane!
You surely don't realize how dim a bulb you appear to be here. How much longer
are you going to keep up this charade?

Sorry, I don't fancy myself as a DXer. Oh, I work them from time to time, but
DXCC is something I never had the time to pursue, so, unlike you, I don't fancy
myself a DXer as the real ones do. For that matter, what bands did you work in
Somalia on your Tech Plus license with your invalid "permission"? You have the
cajones to criticize any other ham?

I've found that to be the shorter limit. I've seen MARS patches go 12-15 minutes based on need.

But if you are in-country sometime in March, out end of May (standard 90 day rotation), and waited to operate until correspondence to the FCC and ARRL came back positive, I would suggest that actual operating time be reduced to 3 or 4 weeks.

> The VE's at my session warne a YL about doing this as she apparently
> did this. I suppose it's at the discretion of the VE?

I'm an accredited VE for both W5YI and ARRL VEC.

From the ARRL VE manual, chapter 6
(http://www.arrl.org/arrlvec/vemanual/index.html):

"Although the ARRL/VEC is of the opinion that writing dot and dash
characters (transcripts) on a copy sheet does not in and of itself
demonstrate ability to copy (or translate) the Morse code at the
prescribed speed, because the FCC provides no guidance in this area, we
leave it to you--the VE and VE team--to decide how many, if any, dot and
dash characters you will allow an examinee to include (and translate) on
his or her code copy sheet--and how much time the applicant may take to
translate the dot/dash characters.

"You must decide whether your team will allow any, some or all text to
be first written as dot and dash characters and later translated. If you
do not accept any dot/dash characters on a code copy sheet, you must
announce this protocol to all applicants taking the Morse code test
before the Morse code message begins. The same is true for allowing some
characters, or unlimited characters.

"If your team doesn't care, or you make no clear announcement at the
beginning of every Morse code test segment, your team must be prepared
to accept any form of code copy."

The last sentence specifies (assuming it was an ARRL/VEC session) that
they couldn't fail her for doing it that way, unless they announced
before the session started that it was prohibited.

The prevailing attitude among the VEs at the sessions I've worked was
that any means they used to pass (provided it was "by ear", as specified
in the regs) was OK with us.

OK, Dick,

1. Somalia is not issuing licenses. They have no government to do so.
2. At this time to operate in Somolia[sic] you would need permission from the United Nations or your military commander.
3. Permission is not a license. It is merely permission. A license would say T5EX, or some such call.

Somalia (T5) At this time to operate in Somolia[sic] you would need
permission from the United Nations or your military commander.

Dick, my commander has the authority to authorize amateur operation just as
stated.

What about that don't you understand?

denigrate
>ham radio and all its participants, and to assist his search and destroy
mission.
>Since it isn't, and he as well as everyone else nows it, your observation is
>exactly on the mark.

No. Both of you are guilty of fabricating lies. Carroll worst of all since
he
cannot be original, only following another unceasing liar.

None of the individual participants in this newsgroup "represent" amateur
radio in its entirety. They are individuals with different opinions and
viewpoints. Some of them cannot stand open, strong debate and they
resort to puerile, primitive methods to attempt to get back at other
debaters. You are one of them, sad to say. You had promise years
ago in here, then you lost it.

If anyone "denigrates ham radio," it would surely be one who has been
licensed a long time and has worked much DX, Jim Kehler, KH2D. You
are invited to view his website at http://kh2d.net, click on "opinions" then
select what you want. I invite you to read the selection "Brain-Dead."

KH2D was once a regular in here, a most strong PCTA. He wore out.

You have been a regular in this newsgroup. You have also been
on here under pseudonyms. We've gone over this before in here
and I've shown you the obvious clues that other readers can also
see if they have selected full header information on messages.

Going over the past is fruitless waste of bandwidth. In case of
the future, an LAPD special unit already has a case file to
observe any more signs of stalking.

<already posted "letter" omitted for brevity...>

>> >and if I can be of any other assistance, feel free to email me."
>> >>
>> >(Name & Callsigns withheld)
>> >>

None are posted in here. Show the identity of "(Name and
Callsign withheld)" so that others can verify it.

If there is no verification of any kind, then it is just a fabrication.

>> Some kind of "e-mail fan club" doesn't sound authentic for
>> anything but ordinary libel spread around by others with some
>> out of spite or are now afraid to come out in public forums.
>
>Actually that was an embellishment on Brian K's part

That doesn't excuse Kelly of anything, nor you.

Readers can only judge zero-verification stories as stories.

>It was shipped in with his stuff, on a pallet. At least in one case.
>In 2 others, they brought it in with their gear. In total, 3 people
>responded to my initial inquires as to the need for written
>documentation to operate in Somalia during 1992-1993.

Then you should have jumped in here early with both J-38s
blazing.

The accusation of bootlegging has been levelled at one ham
by another. It is not about "how equipment was brought in"
some place. I could ask for your shipping documentation
(in writing) to get that non-military "pallet" over to Somalia,
couldn't I?

What you have "supplied" here are nothing but unverifiable
claims by "three unidentified others" who have done something
somewhere. Apparent fabrication with nothing to back it up.

>Would that be kinda like you personally running 1.2 million RTTY patches
>during your tour. Most phone patches are only a few minutes in length,
>if that depending on the demand. MARS only allows 3 minutes max.

Irrelevant. Way back I stated only that my operational duties were
analagous to sending that many TTY messages (not "patches").
That was based on the number of transmitters, the number of
outgoing circuits, and the published message rate per month.
Others misquoted, took it out of context.

You have misdirected again by not answering my questions to
Brian Kelly on his quoting of an unverifiable, unidentified
e-mail.

You are welcome to answer those questions. How did "machine gunfire" zero in on a Cushcraft vertical antenna (R7) and not touch the alleged "ham station" or the unidentified "ham operator?" For that matter, was the R7 available in early 1993? I honestly don't know, nor care. I don't find any identification for a Yaesu "R3000" receiver although the Yaesu FT101EE is an old-timer.

Was the R7 manually beaten down and then machine gunned to put it out of its misery? Were Kevlar vests provided to protect the radios? How did other military personnel fight their way to this special-services "MARS station" to make little bitty 3 minute phone patches back home? There are many such questions of this unverified, unidentified quotation made by Brian Kelly.

>Provide some header information. Make sure you use NTTP or ISP routing.
>That's the only way to be absolutely sure. I know you can't because if
>you had that information, an anal retentive like yourself you have
>already posted it. Sorry, you lose yet again

I've already posted previous header information from your pseudonym post. Way back in 2001.

You cannot "win" now-old message rounds by repeating the same thing now and "demanding" to do it all over. Wasted effort. You won't win anything but gaining one more notch in being a very sore loser.

Go with the flow and the charge of two hams against another in charges of "bootlegging" from Somalia. Prove those charges. If you can't, shut up and don't pout about the past.

>> Unless you can verify that quote, readers have to judge it as
>> being yet-another fabrication of someone's imagination.
>
>Be happy to e-mail copies upon request

Send anything you want. I have up to date virus software.

I'm not afraid to open spam mail. Others in here are very afraid to open such things, wimp out and delete it. That's a good way to misdirect from a reference/validation...claim it is "dangerous" and refuse to recognize it. They think they "win" message rounds by not conceding, only to prove how false they really are by saying they "refusing it." :-)

Now what was your original purpose in here in regards to ham radio policy? I was sure it was all about multiple personality disorder on your part...

Your belief is correct. Judge Heil seems to be only interested in dominating an amateur radio newsgroup, using his limited imagination to fabricate "why" others are here.

>here on RRAP, it would demand complete independent certification.

Dickiebird, you just go ahead and verify anything you want.

You can start with e-mail to Ed Hare if you like, then the
references I posted just previously.

However, if you start demanding things, then the rest of us
can demand things from you. The first one that comes to
mind is your insistance that Los Angeles Police Department
once had a "CW network" with other PDs. LAPD public
relations said they had a teleprinter telegraphy net
connection prior to WW2, not a morse code telegraphy net.
The other one is that you claim Shannon's Law doesn't
apply in amateur radio yet throughput in any modulation is
determined by ham radio designers using that 1947 law.

We could go on to other things but I don't think you'd like
another go-around on any of them any more than you liked
the first ones.

Note: I don't, nor have ever had any handle or pseudonym
of "NoCWtesticles." Stop the silly fabrication.

> see if they have selected full header information on messages

Get this straight..YOU've gone over this and with absolutely no fully
identifiable anything. Fiction is still fiction no matter which way you
orient the pages.

>
> Going over the past is fruitless waste of bandwidth.

The why do you keep bringing up the same tired inaccurate story.

In case of
> the future, an LAPD special unit already has a case file to
> observe any more signs of stalking.

I love this part...I am sure the special unit must have a huge file on
you. Perhaps we'll see you on COPS, as on of the normal LA loonies who
mumbles down the street accosting people and small animals??

Tell us about the air traffic control tower recordings and plane tail
registry numbers again. I love that story. Maybe the suspicious phone
calls you received..wow Fiction like this should be published.

>
> None are posted in here. Show the identity of "(Name and

No Len, you personally took credit for relaying 1.2 million RTTY patches
and were caught and called on the carpet about it. You then backpedaled
and said you were part of a team. Sorry, no points for this one.

>
> You have misdirected again by not answering my questions to

If you say.

>
> You are welcome to answer those questions. How did "machine
> gunfire" zero in on a Cushcraft vertical antenna (R7) and not touch
> the alleged "ham station" or the unidentified "ham operator?"

Maybe since the antenna was on a roof, it got it. I doubt the station
was on the roof or the operator for that matter. I didn't ask that
question, the information was volunteered

For
> that matter, was the R7 available in early 1993? I honestly don't
> know, nor care.

They why ask? FWIW, it was available in late 1991

I don't find any identification for a Yaesu "R3000"
> receiver although the Yaesu FT101EE is an old-timer.
>

Maybe you should ask Brian. He'd be more aware of how the calls were
made. I relayed quite a few as AAR2NL and usually it was done at a
scheduled time for people in the NY-NJ area. But again, since these
questions were not part of my original inquiry, as you say, I honestly
don't know, nor care.

>

That's pretty interesting. I wasn't taking my code test at that particular session so I really don't know if they had made any prior annoucements. I did see them tell her that they "really shouldn't accept this"...but they did. :-)

I don't recall the VEs at my code session making any annoucements either but then again...I was pretty nervous that morning and just wanted the dits and dahs to commence. Once they did, the nervousness was quickly displaced. Thanks for the clarification.

>
>Too much work for anyone. It just can't be done and won't be.
>The internet has seen to that.

In theory, it could be done, even with the internet. But the resources required insure that it won't be done.

Main point is that we should not ask FCC for things that they obviously won't do, because it just makes the asker look clueless.

>> >The internet has made

>>
>> But the material would have to be gathered in the first place.
>
>Piece of cake... web site in some foriegn location asks for
>anyone taking a test to submit any questions they remember.

And those responding would leave an email trail. Plus, each exam could contain a warning not to divulge any of its contents to anyone other than the FCC.

I remember that when K3NYT (sk) gave me the Novice by-mail back in 1967, the test came in a sealed envelope with all sorts of warnings on it. He never even saw the test, just gave me the unopened envelope and said I was to follow the instructions.

One of the instructions, as I recall, was that no one was to copy or divulge the test contents in any way. Another was that by opening the test envelope and sining the Form 610, the volunteer examiner and the test-taker agreed to all of the FCC's conditions.

Of course we were on our honor to actually follow the instructions and abide by our agreements. Those concepts probably wouldn't fly today!

>See "piece of cake" above which requires no one to go face-to-face
>with the FCC.

If FCC was doing all the testing, and someone tried to do the Bash thing, they'd have to get their info from folks who had actually gone to FCC exam sessions. So there would have to be somebody who had been told "do not divulge", and who had agreed not to divulge, but who went ahead and divulged anyway. That person could be prosecuted. Not a question of copyrights, but of a voluntary agreement between test-taker and FCC. But as stated before, such concepts probably wouldn't fly today.

>> That would have to change. More $$

>> >> >You then said: "Whether that's true or not, how can anyone
>> >> >convince FCC different?"
>>
>> >> Exactly.
>>
>> >> >If we believe

>> we don't have to do B" - a conditional statement. But A is not true.
>
>I said "IF" we believe A is true.

Exactly! I was simply clarifying what the "not broke" statement referred to. Your "IF" statement was well worded and clear to most people.

I think it's broken, but the fix of going back to the old testing methods isn't practical. We have to apply other fixes.

>Other than larger pools, what is needed?

Let's look at the rest of that list:

2) Increase the number of choices on each question from 4 to 5

In my old LMs, there's an illustration of the old multiple choice answer sheet. The answer sheet has a demo question on it. Both the demo question and the answer sheet are set up for 5 choices, not 4. I don't know when the change took place, but somewhere along the line the multiple choices were reduced from 4 to 5.

The chance of randomly guessing correctly with 4 choices is 25% and the chance of randomly guessing correctly with 5 choices is 20%, so it may appear to some

that the difference is minimal. However, in most multiple choice questions there are one or two answers that are obviously wrong.

With a 4 choice question, if one answer can be ruled out as obviously wrong, the chances of guessing correctly among the remaining 3 improve to 33%. If 2 answers can be eliminated, the chances of randomly guessing correctly among the remaining 2 is 50%

With a 5 choice question, the corresponding chances of guessing correctly are only 25 and 33%.

3) Change the grading method so that wrong answers decrease the score (eliminates the gain from pure guessing)

As it stands now, there is no downside to guessing at questions one has no clue about. Pure random guessing should average out to a 25% correct mark. One only needs about 74% to pass. The proper negative credit for wrong answers eliminates that.

4) Break each Element into subelements (say, Safety, Regs, Theory) or some such, and require a certain number of right answers in each subelement. (The way it is now, a new ham could get all the Safety questions wrong and still pass, all the way to Extra.)

This part is particularly important because the safety issues today go beyond merely electrocuting oneself.

5) Focus more on the basics and less on esoterics (like the "how much time do you have to notify the FCC about a station in space" questions)

Your thoughts?

368. How Many Messages?

Newsgroup: rec.radio.amateur.policy
Date: 2002-09-04 12:13:49 UTC
From: n2ey@aol.com
Message-ID: <9f4bfe89.0209040413.718de0bb@posting.google.com>
Source record: 52235

There seems to be a lot of misunderstanding about who handled how many messages, and when. Perhaps this will shed some light on the subject.

The relevant quote is:

"Has N2EY ever relayed-transmitted a teleprinter message
over radio, any radio? I've relayed-transmitted about 1.32
million of them on HF between 1953-1955.."

For context, here's the whole message, from Google:

>Including CW/Morse?

The word "any" includes WHATEVER radio is available.

The only reason for N2EY's "question" is gratuitous confrontation.

>> If I
>>thought there were that many people always "within range" I would
also have
>>FRS, GMRS, etc., capabilities.
>
>They are getting popular. An injured mountain hiker was rescued last
year
>because his FRS HT was heard 80 miles away by a couple of kids. Love
>that tropo ducting.

Where? Last year a GROUP of mountain climbers were stranded
on Mt. Ranier in Washington. Their rescue was begun after their
FRS HT was heard accidentally by a nine-year-old girl only about
30 miles away. NO "tropo ducting" there, just line-of-sight. It was
in the Seattle, Tacoma, and Olympia papers, made national news.
The actual rescue (by Army helicopters) involved military and
public safety radios, the park service, and three Washington state
agencies.

Why distort the truth?

The US Army has had operational troposcatter radio relay units
for a quarter-century. That is not rocket science, nor is line-of-
sight communications.

>Mobile has its limitations, but home is another story. Ask the folks
who
>dealt with the ice storms in 1997.

Ask the folks who dealt with an earthquake in 1994. You should
have no problem since there were at least 10 million of them
directly involved here in January of that year. The only evidence of
ham radio emergency communications appeared in the amateur
radio "press" over a week AFTER the event.

>>I suspect there are many who feel the same way.
>

>Kim, have you ever actually had a QSO on CW/Morse?

Why is that a "curiosity" question?

>Ever originated,
>received or relayed a formal message by CW/Morse?

Has N2EY ever relayed-transmitted a teleprinter message over radio, any radio? I've relayed-transmitted about 1.32 million of them on HF between 1953-1955..

>Just curious.

So am I. Considering that the commercial communications carriers and the US military had dropped "CW/Morse" from fixed-point to fixed-point 24/7 HF messaging by 1948, I'm still trying to understand "CW gets through when ALL other modes fail."

If "CW/Morse" is so reliable, so robust, it would seem logical that the Big Boys in communications would have kept the mode. The threat of possible thermonuclear conflict during the Cold War period after 1948 ought to rank as "emergency," wouldn't you think?

In my civilian life experience since 1960 I've sent about 7 telegrams and received about 10 telegrams, all over commercial teleprinter-telegraph communications providers. I've never, ever received a "formal" or informal amateur "radiogram." I don't know anyone who has, either licensed in some radio service or not.

Where is this blizzard of amateur "CW/Morse" radiograms blowing?

I'll bet if I dug deep enought I would find that ceramic switch too. I
did run across two relics from those days recently. The carcass of the
80m ARC-5 and the 2m AM rcvr I built around a WW2 era vhf version of
the ARC-5. I'd mounted a homebrewed selenium rectifier power supply,
speaker and an Ameco Nuvistor pre-amp on a chassis & front panel along
with the rcvr and did some lathe work to connect a turns counter to
the splined tuning shaft of the rcvr. It was my Gen II FRC dx spots
rcvr which replaced my Benton Harbor Lunchbox.

The problem with the current cost of Collins radios is that they're
overpriced vs. performance because it's cult gear. Ya can get a
complete Drake R4/T4 station on the air for less than the current cost
of a 75A4 or a 75S3B rcvr alone and get 95% of the performance of the
Collins equipment.
>
>
> Or pick up an FT-897 for about the same price. Or any of dozens of rigs from

Dunno if I agree with that or not. I'm pretty soured on depending on
boat anchors for day in day out operations. To wit the problems I've
had with the 940 plus my 75S-3B is gonna need a bunch of work to get
it back up to snuff. I don't care about hanging onto "collectible"
gear just because it's collectible and glows in the dark, all I wanna
do is operate on a dependable basis. I finally dumped my nice old Benz
coupe for the same reason, it got to the point where it was spending
more time in my wallet than it did on the road.

Of course, all HF xcvrs use basic PLC technolgy for chores like mode &

band switching. Somebody around here sed he has an A-B Slick 500 PLC
he was gonna put to work in his ham station but I forget who it was.
Sure would simplify life at an SO2R station.

That's a shame, Len. That's one item for which you already hold the
qualifications and there's no amateur radio license needed.

> It would seem that the BDOFs think that all unlicensed (in amateur
> radio) are "Clueless Newbies" (definition of KH2D) and must respect and

No, Len. The unlicensed aren't "clueless newbies". The unlicensed
haven't become "newbies". Gaining either your respect or your admiration
isn't one of my goals in life.

> Actually, Heil would seem to belong to a third Jim Kehler grouping, best

With or without the output of anyone here, you aren't likely to actually become a radio amateur. The put-downs and insults you suffer are in response to the stuff you dish out. I'm not about to start feeling sorry for you. Maybe you can receive some sympathy from Brian.

What about your self-proclaimed "DXer" status? A DXer wouldn't respond with "I have my logs. It's enough for me". What about your high amateur radio ethics and morality comments? Did you check to see that each station you contacted as a bootlegger operating in Somalia was operating within his country's band allocation? I don't need your QSL, Brian. I have a T5 card which was accepted for DXCC.

I don't care, Brian. You can retain your bootlegger status or if you
prefer, you can say that you are a fabricator and that you made the
whole thing up about operating from Somalia. Several others who
operated there have confirmed that they needed permission in writing for
amateur radio operation. That leaves you as odd man out.

> > We have only your claim that you have had no complaints.
>
> Except yours. Yet you are not even in my Somali logs. Did you fudge and
> put me in your logs anyway?

I've already told you. I was in Botswana. I didn't need Somalia as
K8MN and couldn't have worked you from Botswana for credit toward my
stateside DXCC.

> > We have only your claim that you had permission to operate from T5.
>
> I know, I know. I only wished you were there, too. Then you could be an
> eye-witness instead of a squawking bystander.

I wasn't in the places where you were and you were not in the places
where I operated. I do have documentation which confirms my permission
to be on the ham bands from each spot. That's where we differ--that and
the fact that I never wished you were in the spots where I was.

> > > Except from you. So what are you doing about it? Squawking?

> You're not doing a very good job.

On the contrary, Brian. I'm doing a fine job of it. Either you were unethical or stupid in operating from Somalia.

> Time to step it up a little or go back to
> working out of banders on 6M.

I've always operated where I was permitted to operate. If French ops working out of their assigned band segments or bootleggers operating from Somalia call me, it is for others to deal with.

It would be interesting to point out that when you've written of my 6m operations from Tanzania, you were a squawking bystander. I even told you what you could do about it. You didn't take my advice. Instead, you claimed the superiority of high moral ground and high amateur radio ethics. Those claims have certainly made you look very foolish.

Reading Comprehension 101, Brian. Len is the non-DXer. You are the
world's most incompetent DXer.

> But you're not even in my Somali log, so I'd say you're not the DXer you
> give yourself credit to be.

DX 101: If you don't need it, don't call it. If you do need it for
your DXCC from the U.S., don't call it if you're in Botswana.

> Don't pout. You're still the World's Greatest DXer in my book (just not in
> my logs).

Oh--but I am in your logs, Brian. I'm just not in the logs for your
illicit Somali operations.

Sorry, Brian. You claim doesn't wash. If you'd been given permission
to operate, you'd have it in writing. You don't.

> > > > Every country which recognizes amateur radio operation has a written

It is signed by the man in charge of issuing all radio licenses in the
country. The appropriate seal is applied. Copies of the license, my
visa and residency papers and of my passport entry stamp into
Guinea-Bissau were all supplied to the DXCC desk. My operation is
documented and has been accepted.

Reading comprehension 101: You are confusing two separate items.

> You simply cannot remember what you said. That's good for you because you
> were wrong. No sense in two people remembering your mistakes.

I'd tread lightly on THAT one, Brian. Right now, you've got a whole
group of people remembering your mistakes: A radio license has to be in
writing? Damn!
It seems that others operating from Somalia knew all about that part.

> unexpected launch of Sputnik by the Soviet Union in 1957,
> and the Soviets' early space triumphs, led the FCC to
> think that American amateur radio needed some kind of
> change in the licensing area.

In retrospect, it is easy to see that the noble goals
of incentive licensing were derailed by including
higher code-speed requirements for higher class licenses.
Eventually, getting an Extra class license was all
about making 20 wpm and not at all about demonstrating
technical competence.

> - A majority of those who commented supported the idea.

I am left with the distinct impression that amateur radio
operators may have been their own, willing executioners.
It is obvious now, and was fairly obvious even in the 1920's,
that the regulators and their industry sponsors would
have been quite happy if amateur radio would have withered
and died on the vine. By tolerating, and even embracing,
incentive licensing, we hams may have relegated ourselves
and our avocation to the dustbin of history rather than
expanding it to become a viable, economically significant
adjunct to, and us to be participants in, the burgeoning,
20th-century electronic-technology marketplace.

No, Lennie...I am just reciting your own words back to you. Bitter, eh?

>You go right ahead and tell the Department of the Army and
> the FBI that my military service was "cowardly." Let's see if
> they will come around and arrest me.

Addressed above.

>Hypocritical little snit, aren't you? In one post you call my
> military service "cowardice," now you want to "pat my back"
> in some kind of "gratitude for having been there."

Still addressed above. You served...Got your DD214 honorably before you
pissed off enough people to get Article 15'd.

>You've called my military service "cowardly." PROVE IT or
> shut up.

Every post where you have made a point of associating yourself with those
who dies three years before you arrived in-theater make my point, Lennie.

YOU are the one who characterizes your war record.

YOU are the one who has to embellish his "service" by trying to lay-claim
to having single handedly passed over 1.2 million messages while working as a

rear area radio clerk.

YOU are the one who subjects himself to this greueling lambasting beause YOU open your stupid mouth and utter things that are ill-advised and pontificating bull...

YOU are the one who has to suffer the consequences of YOUR misconduct and misdeeds.

Want to see the end of posts that are constantly ripping you a new rectum? Then YOU "shut up", Lennie H...YOU are the one who fuels it...YOU provide all my "material". YOU are the source of your own ulcers.

Thanks.

The world of radio is a big world. This particular newsgroup deals with amateur radio policy. You call others posting here judges. You take it upon yourself to judge not only the state of amateur radio but those radio amateurs who post here yet you are not a radio amateur yourself. You comment to the FCC on amateur radio regulation yet you are not a radio amateur yourself. You've now inserted yourself into a discussion on amateur radio operation from Somalia and yet you are not a radio amateur yourself.

I missed the first part in Lennie's original post, but you are absolutely correct.

Guess Lennie didn't see too many machine gun holes in his clerk's role, eh Brian?...

I ran up a record of nine USMC Rifle Expert awards while on Active Duty. This involved hitting bullseyes from up to 800 meters away with aimed fire.

Betcha I could blow away the base of a Hustler 5BTV or the center support of a dipole array with a Warsaw Pact weapon on full auto from 100 meters, wouldn't you? Matter of fact, bet I could take the traps out one-by-one from top to bottom if I took my time.

>Screw The Putz, who cares how he "judges" anything? Does it matter?

Jim, Having gone through the process long ago, I can't agree with that.
It would be true only for those who for whatever reason found themselves
unwilling or unable to complete the process. Technical learning - not necessarily
competence- was always the major part of it. No, not learning to the
level of engineering, but advanced learning in radio theory and the practical
application of that learning. Whatever anyone says about the study guides of the
er - they did not, for anything more than the basics of terminology such as basic
Ohm's law and frequency allocations and such other subjects which must be studied
on the most basic level and learned by rote memorization before understanding takes place, contain the exact questions and their exact answers. What they contained was study material in discussion paragraph form which the learner was expected, yea required, to learn enough about to answer questions on the test which he could not divine in advance, and certainly were never revealed in advance. Of course the entry level tests had a far larger percentage of those "givens" than the Advanced and Extra, which had virtually none.

Morse code, to those of us who eagerly took on Incentive Licensing, was no more than another part of radiocommunications, albeit the most basic mode ever derived for radio. That's what makes it so difficult to understand why so many fight it so hard.It is bottom line radiocommunications, that which can be available far more ubiquitously than any other, that which may be there for you when there is no chance of any other mode being available. The higher speeds - which, by the way, 20WPM is not, always has come to those who use it often. Anyone who does not

will never progress to that level. Anyone who never starts will never learn to use it even moderately.

It's no mystery to me, or most other older code-qualified hams, why it has stayed around so long. It is unique and will always be. Agreed, it is only one mode, but it is also unique in that it requires personally learned and developed skill and discipline not found elsewhere.

Dick

this week the Fulton County Ohio fair is going on, and the Fulton County CLub has 2 stations operating, with the purpose of getting new people interested in amateur radio, operators will be on 80m, 40m, and 20m, and possibly on 17m. If you hear the call K8BXQ this is the station, we look forward to talking with you, and putting on a good demonstration to the public.

I guess my expectation for incentive licensing when
it was (re-)instituted in 1968 was that it would raise
the value and prestige of amateur radio licenses
back to the level they enjoyed in the 1950's when a
general-class ticket was good enough for a job as
an audio engineer at a local radio station. And the
only guy in town with an Extra was the CE of an
AM-TV operation.

It can be seen now that in 1968 technology and
industry was moving past amateur radio in ways
that made much of the skill and knowledge required
to achieve a license obsolete or of no interest to the
electronics and communications business areas.
It has been suggested that technical and
operational excellence are their own rewards. But
the rationale behind incentive licensing was to
upgrade amateur radio within the context of the
larger national need for trained individuals with
relevant skills and expertise. However, it was
evident then, and is even more so now, that this
would be difficult to do given the ever-widening
gap between amateur radio and the rest of the
technological world.

> Morse code, to those of us who eagerly took on

> any other, that which may be there for you when
> there is no chance of any other mode being
> available......

For whatever reasons, the rest of communications
technology was moving away from using it as fast
as it could, seemingly willing to tolerate the
occasional outages and failures of voice and
teleprinter circuits instead of utilizing (and
handsomely remunerating) the manual radiotelegraphy
skills honed by amateur radio operators as a
product of incentive licensing. This checkbook
voting by industry negated the relevance of
the code-testing part of incentive licensing
to the national need.

> ......Whatever anyone says about the
> study guides of the er - they did not, for
> anything more than the basics of terminology such
> as basic Ohm's law and frequency allocations and
> such other subjects which must be studied on the
> most basic level and learned by rote memorization
> before understanding takes place, contain the
> exact questions and their exact answers....

And that's the other shoe falling on incentive
licensing - the sea change that occurred at the
FCC when they were redirected away from being
social engineers of the airwaves and told not
to interfere with the free-market-driven wireless
communications industry. Which meant that they
were no longer in the business of qualifying
employees whose duties tangentially involved
the radiation of radio-frequency energy. So
there is now no FCC-proctored technical skill
set to aspire to master with the expectation that
those skills will be recognized by society at large
and, again, be subject to remunerative employment.

Without relevance to either operational skills or
technical expertise at the national societal level,
incentive licensing is finally seen for what it
really is, an utter failure in governmental policy.

>> about as much as your old S-40.

>The problem with the current cost of Collins radios is that they're
>overpriced vs. performance because it's cult gear.

Yup. But even with the overpricing they're still cheap compared to when they
were new. Or when they were 20 years old.

>Ya can get a
>complete Drake R4/T4 station on the air for less than the current cost
>of a 75A4 or a 75S3B rcvr alone and get 95% of the performance of the
>Collins equipment.

Don't think I haven't considered that. In fact, for about the price of a
plain-Jane S-line you can have a full Drake setup (R4/T4/L4) - B or maybe even
C vintage.

>> Or pick up an FT-897 for about the same price. Or any of dozens of rigs
>>from the eras in-between.

>Dunno if I agree with that or not. I'm pretty soured on depending on
>boat anchors for day in day out operations. To wit the problems I've
>had with the 940 plus my 75S-3B is gonna need a bunch of work to get
>it back up to snuff.

There are folks who'll pay nicely for that 75S-3B if it's fixable. The 940 is
another story.

> I don't care about hanging onto "collectible"
>gear just because it's collectible and glows in the dark, all I wanna

>do is operate on a dependable basis.

Then ya get an '897 or FT-1000 or whatever floats yer boat. $3K for a transceiver today translates to about $5-600 back when the T4/R4 line was in production. But you couldn't even buy a new TR-4 for $500 back then, and it needed a power supply, too.

>I finally dumped my nice old Benz

(sigh)

>> More choices than ever. Pretty good for a 'dying' ARS, huh?

>"Dying". Yeah: Right. Luv it.

>> Know what makes all
>> that modern gear so inexpensive? PLCs, for one thing.

>Of course, all HF xcvrs use basic PLC technolgy for chores like mode &
>band switching. Somebody around here sed he has an A-B Slick 500 PLC
>he was gonna put to work in his ham station but I forget who it was.
>Sure would simplify life at an SO2R station.

Heck yes. Sometime I'll tell ya about how I helped introduce PLCs to a whole industry. Gosh - that was almost 20 years ago. Wound up giving a talk on it at a convention. Now that industry uses PLCs almost exclusively for new installations. All in a day's work.

Ouch! That's a helluva long throw. I'll bet you din do that with an
M-16. I was a decent paper puncher in high school, I was on the NRA
Jr. Small Bore National Championship team, we could all hold 3/8"
groups all day in all positions but that was with bull-barrel
Remingtons indoors at only 50 ft. Can't imagine hitting anything a
half mile out without a real varminter and a 10x 'scope. The windage .
. The only military shoulder weapons I trained on were the M1, the M1
carbine and the BAR. Corpse of Injuneers ROTC daze. I couldn't hit the
ass end of a barn with any of 'em the way I could with the big

Remington but with more time on the range I coulda gotten a lot better
with the M1. The old sergeants with their tricked-out glass-bedded M1s
did some whizzy long range stunts. No bad for an old .30-06
autoloader. What'd you use?
>
>
>

You're welcome! There's a lot more detail that I can provide, but all the
important points are there in the short version.

>> In 1958 the FCC began to rethink its late-1952 decision
>> granting all privileges to General and Conditional class
>> amateurs. They noted that homebrewing and experimenting
>> were decreasing, phone operation was increasing, and the
>> technical knowledge and operating skills of many amateurs
>> seemed mediocre at best. It's also possible that the

>> think that American amateur radio needed some kind of
>> change in the licensing area.
>
>In retrospect, it is easy to see that the noble goals
>of incentive licensing were derailed by including
>higher code-speed requirements for higher class licenses.

Perhaps - but the FCC thought that increased code requirements were a necessary
part of the license process. The Extra class license was added (actually
re-created) in the 1951 restructuring.

Note that the original 1963 ARRL proposal simply called for the reopening of
the Advanced to new licenses, and restriction of the ham 'phone bands on 80
thru 15 meters to Advanceds and Extras. All anyone would have had to do to
retain full privs under that proposal was to pass the Advanced written - no new
code test at all. But FCC wasn't satisfied with such a simple proposal, and
adopted ideas from other, later proposals to give us the subbands and
Extra-for-full-privs ideas.

FCC even proposed (in 1965) demoting existing Advanceds to General and creating
a new "Amateur First Class" requiring a 16 wpm code test.

I recently learned, thanks to Phil Kane, K2ASP, that during the Vietnam War
years there was such a shortage of qualified civilian marine radio operators
that the rules were changed for commercial radiotelegraph licenses. Perhaps

that had some influence on the FCC's thinking.

>Eventually, getting an Extra class license was all
>about making 20 wpm and not at all about demonstrating
>technical competence.

I disagree! It was about both, for me anyway. But I can see where a person with some knowledge of theory would have to focus most or all of their efforts on code, just as someone skilled in code would have to focus on theory.

>> - A majority of those who commented supported the idea.

>I am left with the distinct impression that amateur radio
>operators may have been their own, willing executioners.

How so? FCC wanted incentive licensing. Do you think hams could have stopped them?

>It is obvious now, and was fairly obvious even in the 1920's,
>that the regulators and their industry sponsors would
>have been quite happy if amateur radio would have withered
>and died on the vine.

Of course. That's probably even more true today.

> By tolerating, and even embracing,
>incentive licensing, we hams may have relegated ourselves
>and our avocation to the dustbin of history rather than
>expanding it to become a viable, economically significant
>adjunct to, and us to be participants in, the burgeoning,
>20th-century electronic-technology marketplace.

I disagree very strongly! Let's do some what-ifs...

Suppose the FCC had somehow been convinced, in 1963-68 to leave the license situation the way it was. How would that have helped amateur radio expand or modernize?

One of the trends that the FCC was concerned about was the increasing amount of 'appliance operating' by hams in the early 1960s. What FCC failed to understand was that this trend was logical and natural. As amateur radio equipment became more complex and smaller, the percentage of hams with the time, skills, and resources to build serious ham gear decreased. Even more important, the cost of new amateur equipment of a given performance level kept dropping, and Americans' prosperity kept rising.

On top of all this, the development of the low-cost amateur HF SSB transceiver and linear caused a major shift in the economics of high power 'phone. A 1955 "dream station" might consist of an HRO-60 receiver, Johnson Ranger, and Johnson Desk Kilowatt. Total cost about $2500, weight in the hundreds of pounds, legal limit on AM, and you get a nice desk with it. 10 years later, a Drake TR-4 and L4 line running the legal limit on SSB could be had for about half that price and a small fraction of the size and weight.

Those with homebrew skills in the AM era might spend many hours and dollars to fill a 6 foot rack with the goodies needed to run high power AM. By the mid-60s, the solder-slingers could assemble a Heath SB-line for less money, effort and space. Let's see - SB-101 cost $370, HP-23 cost $50, SB-220 cost $360 - total cost of legal limit 1965 SSB kit station, under $800. Not an S-line or Drake line by any means, but a lot smaller and cheaper than its AM equivalent.

Some hams (like me) still build our own gear. But that's because we have special requirements and resources. And the license is for operating, not building.

These trends were all happening before incentive licensing, and the rules changes did little to stop them.

Not hardly, but it could be fun. I'd opt for Jim's "go get a rude HW-16 and
rebuild it," suggestion.

I saw that picture. I thought it was funny. Typical aircrew!!!

I wouldn't care how PO'd I was at whoever might have sent me something like
that, I'd just have to laugh!

A hairy butt is obsene? It's just gross, but typical of aircrew humor.

Since when did you become a prude?

Oh yeh, I forgot. You're a Marine and Marines don't have hairy butts. They
use NAIR and eyebrow pencils.

Were you ever active duty, or always reserve?

I have a license. It says, N0iMD. Check it out on the FCC web site. I
never had a license that said T5iMD.

Who was that guy with the T5 call that had the same suffix as his US
callsign? You might want to put Steve on that one and find out if that khat
chewing AK carrying Technical at the K5 traffic circle had a manual
typewriter and watermark stationary.

Dick wouldn't know the first thing about operating from a foreign country,
with or without a government.

Go for it, Dick.

Dick, you just got through telling us, that you, as an experienced ham, had to study W1AW to get to 20wpm. Didn't you use the code on the air prior to restructuring? Apparently not, because you said, even though not fast, 20 wpm Always comes to those who use it often.

You're not being very truthful, are you?

Are you the ancient equivalent of the modern code-tape Extra?

How can you say that? My operations predated any 1992-3 operation. Anyone
coming in after the first wave had time to prepare the very best
documentation an correspondence that I did not have the opportunity to do.

> > > We have only your claim that you have had no complaints.

Exactly. The FCC should test what is "required." Nothing more, nothing
less.

Ex., if 5wpm were good enough to operate code on 15M in 1968, why wasn't it
good enough to operate code on 20M?

My sincere apologies about disturbing your fantasy-land fish story that tried to damn another.

Yes, you fabricators "know the real poop." You live in it.

So, how was your Somalia experience, grizzled old war vet?

428. Re: How Many Messages?

>There seems to be a lot of misunderstanding about who handled how many >messages, and when. Perhaps this will shed some light on the subject.

No, not really. You did not show the one where I estimated how many messages I "controlled" as a team leader at Army station ADA transmitters.

With 36 (plus 6 more later) transmitters, four of them multi-channel (commercial carrier) SSB, and four of them time-multiplexed FSK RTTY, all operating 24/7, that was a lot of TTY circuits. Enough circuits to enable ADA to claim 220 thousand TTY messages a month.

Failure to keep one SSB working meant losing two voice channels and 8 TTY circuits all at once. That didn't happen.

No matter. Some in here won't accept anything if they don't like it or don't like the poster. They have only one "truth," their own fabricated imagination.

Thank you for reposting something of mine, but it won't serve any useful purpose in here.

In article <20020904092241.24675.00001309@mb-mj.aol.com>, k4yz@aol.com (Steve Robeson K4YZ) writes:

> As has Lennie the Liar. However Steve's sources are known to me also,
>and the information is spot-on accurate.

How are they verified? By repetition of the same fabrication over and over until most folks give in under the barrage of fish stories?

Prove the accuracy. Prove it by showing sources that others may verify.

>> How is that verifiable if "name and callsigns are withheld?"
>
> Because not everyone want's their name and address splattered across
>newsgroups that have rabid vermin like you in it.

That little detail didn't disturb you one bit on fabricating a libelous home page on AOL just because you imagined you were "slighted."

AOL stopped it when notified of its existance. Rightly so since it was pre-loaded with plenty of libelous material to get you a very large loss in any civil court.

> What has this got to do with obtaining proper operating permission in
>Somalia, Lennie?

Fish stories are fish stories regardless of the claimed kind of fish. All smell.

> Very good...Lennie can operate a calculator. Guess you get nervous when
>someone starts heading towards that 1.2 million record of yours, huh, Your
>Putziness?

No problem. I could re-do my original estimate of control of message transmission per shift per nine-day period over one and a half years as an operating team leader. Why?

The original message could be found in archives. Jim Miccolis came close to the original posting.

It won't matter because you will not accept anything as truthful even if verifiable. You will only sulk and pout and scream "liar" because you can't bear to be countered in opinions by anyone.

You will continue to insist my military experience was as some kind of "message clerk" because you love putting people down

when they don't agree with you. You ignored my statements of being a team supervisor, even if verifiable, because you live for the personal insult. That is your main task in here, to insult those who don't agree with you.

That's a sad life you lead on this newsgroup.

> Sucks to be you, Lennie. His info is accurate.

Prove it by a source that others can verify. Proof is not done by insulting others. Proof is not done by imagining things and demanding others live in your imaginary world.

That policy includes GETTING INTO amateur radio.

>You call others posting here judges.

Yep, you especially. With cause by lots of public evidence.

>You take it
>upon yourself to judge not only the state of amateur radio but those
>radio amateurs who post here yet you are not a radio amateur yourself.

I don't judge, I point out the obvious.

If one hasn't GOTTEN INTO amateur radio, they don't have a
license, do they?

Why are those who have ALREADY gotten into amateur radio
so adamant about those who have not gotten into ham radio
be quiet and not discuss anything?

Do those already in seek to force those not in to do exactly as
they did? Why? How did they get into such control over others?
They answered less than two hundred written questions and
passed a morse code test. That's hardly a degree-earning
test, isn't it?

There is nothing different about radio physics because a human
agency has created different services and definitions thereof.

>You comment to the FCC on amateur radio regulation yet you are not a
>radio amateur yourself. You've now inserted yourself into a discussion
>on amateur radio operation from Somalia and yet you are not a radio
>amateur yourself.

It would be notable if Judge Heil sues the FCC and the United
States Congress in a class action suit representing all US
radio amateurs. The claim would obviously be that non-licensed-
radio-amateurs (the commissioners, the staff of the FCC) can't
possibly regulate amateur radio because they do not have ham
licenses. That is analagous to what you claim of myself or any
other unlicensed-in-amateur-radio citizen.

By the fact that the US Congress passed the Communications Act of 1934 (which established the FCC), Congress is equally "guilty" of conspiracy to wrongfully regulate or enforce US amateur radio. Their "guilt" is obvious by not requiring any FCC person to pass an amateur radio test.

Go ahead, make the Supreme Court's day...sue the FCC and Congress for not being licensed as amateurs when they aren't required to have amateur radio licenses.

It will be interesting to see what kind of communications law attorney you get. :-)

I was asking a question. How can a question be a "lie?" :-)

> I didn't say your "service" was cowardly, Your Putziness, I said your act
>of promoting yourself by association with those who gave thier lives in
>combat was.

Tsk, tsk. You said I was a liar several times.

Who promoted what? I gave statements of known fact. Nothing was embellished, exaggerated, or untruthful.

>>Gene is a long-time radio amateur, longer than you, for example.
>
> Which has what to do with your misrepresentations and antagonism?

Your charges of "misrepresentation" and "antagonism" are, again, your own imagination feverishly at work. :-)

Eugene Rosenbaum, N2JTV, was assigned to C Company, 8235th Army Unit, at the same time as I, also worked at ADA transmitters. We were both billeted at Hardy Barracks. Hardy Barracks is so named in honor of one of the 8235th AU signalmen killed during the first two weeks of the Korean War.

None of that is "misrepresentation." None of that is "antagonistic." It is verifiable truth.

> No, Lennie...I am just reciting your own words back to you. Bitter, eh?

...and I am simply stating verifiable facts...which you keep saying are all "lies."

The only thing "bitter" about this is yourself refusing to believe verifiable truth as the truth. That is your problem, no one else's.

> Still addressed above. You served...Got your DD214 honorably before you
>pissed off enough people to get Article 15'd.

Incorrect. A "DD-214" is nothing more than a release from active duty.

I have an HONORABLE DISCHARGE from the United States Army.
Received in April, 1960.

That is verifiable truth.

At no time was I ever charged with any article in the Uniform Code
of Military Justice. At no time was I ever charged with anything
in Army Regulations ("ARs") or Special Regulations ("SRs").

That is verifiable truth.

Attempting to "charge" me with any infraction of UCMJ or any
military regulation 40 years later is silly, meaningless, and
unproductive.

> YOU are the one who characterizes your war record.

I merely state it. What I state is correct and verifiable.

> YOU are the one who has to embellish his "service" by trying to lay-claim
>to having single handedly passed over 1.2 million messages while working as a
>rear area radio clerk.

I never claimed to "single handed passing of any messages." Given that
Army radio station ADA handle an average of 220,000 messages a month
during 1955, it would be impossible to "single handedly pass" that many
messages.

I was never a "rear area radio clerk." My basic MOS was microwave
radio relay operator-maintainer. I had secondary MOSs of fixed station
operator-maintainer, VHF radio relay and Carrier operator-maintainer,
finally reaching an MOS of 281.6, microwave radio relay operations and
maintenance supervisor.

You are being silly, meaningless, and unproductive in trying to fabricate
something that isn't true.

> YOU are the one who subjects himself to this greueling lambasting beause
>YOU open your stupid mouth and utter things that are ill-advised and
>pontificating bull...

I've just stated verifiable truth. If you cannot prove otherwise, try not
to
act primitively insulting.

> YOU are the one who has to suffer the consequences of YOUR misconduct
>and misdeeds.

Not at all. I stated what I lived, statements that are verifiable truth.

> Want to see the end of posts that are constantly ripping you a new
>rectum?
> Then YOU "shut up", Lennie H...YOU are the one who fuels it...YOU provide
>all my "material". YOU are the source of your own ulcers.

Now, now, you are going berserk again.

I've stated verifiable truth. You have fabricated the lies and projected your
rage all over this newsgroup. What you write is your problem...and the problem of all readers who see it.

You have proved absolutely nothing in here except an ability to froth at the keyboard, venting fury in a wrath most unbecoming to sane people. Try to seek some mental help. It will do you good as well as all the readers in this newsgroup. Thank you.

Chances are he had been a shipboard radio op at some time.
Almost all early Extras were commercial radiotelegraph ops at
some earlier point.

Valid point, but do we know how many hams who were stimulated
by making their way through incentive licensing would up as
degreed electronics engineers?
I know of some. Would they have done so without incentive
licensing?
No one could even remotely foresee what has happened in the
interim years. To expect FCC to act too much differently seems
unrealistic.

Throughout this period Morse was in full usage in the maritime
world, as well as significant use in military ops, though of
course RTTY and some other modes were indeed taking over. Lots
of Morse was used for reasons of economy, it was simply cheaper,
even with paying the operators, who usually performed other
duties as well. Only within the past decade has that use been
drastically reduced, and at that, not totally eliminated in the
military, particularly for monitoring of other operations.

But no question, ham radio generates few of the type of skills
it was once noted for providing to the job market.

From today's perspective it can easily be seen as such. What
would have been the result of no action? What would have been
the result of tougher technical exams and no code test? Now it
really doesn't matter, for as you say, FCC no longer qualifies
technical people beyond the formalities required by
international treaty. If not for the treaties I really doubt if
any service would be licensed which doesn't generate cash.
There is little about qualifying for any ham radio license
today that translates to the current job market. I doubt
anything FCC could have done in the 60's could have changed
that.
Looking at it from a late 1950's perspective, when FCC began
thinking about making changes in ham radio licensing with a view
toward upgrading hams' technical abilities, it undoubtedly
wouldn't seem like that at all. The problem then was how to get
hams off their duffs and into a learning mode, and how to craft
the changes given the constraints present. FCC initially wanted
to do considerably more than they finally did toward moving hams

toward increased technical skill. It was as though it was expected that hams would learn as payment for their use of the airwaves. All that has since been turned into something of a personal rights bazaar.

I think you expected too much of it all. Hams who have had no technical training
beyond what they get for ham radio licensing are generally not stimulated toward deeper technical topics. Those who find they have the aptitude and interest often follow it to much bigger and better things, even today in some way. Did incentive licensing support or detract from that situation? I think the way one answers that depends on ones viewpoint toward incentive licensing which generally centers on how one feels toward the Morse code requirement. Those who went right on and qualified just because it was a requirement generally are supportive while those who had no interest in CW and therefore believe it should not have been a requirement feel otherwise. But it seems to me a bit of a stretch to pronounce incentive licensing a failure merely because of the Morse code requirement.

In retrospect it probably was not a good thing to require full code qualification for all hams, but it seems there was no easy way to drop it, though a "twin tier" licensing system was seriously considered at one time, one tier with code and one with none. An all-or-nothing sort of test situation wasn't seen as workable, and the movement still presently underway, dropping it in increments, is much more acceptable to most hams, given that CW has always been at the core of amateur radio. And still is, for an awful lot of hams.

Bert,

The dual levers will permit squeeze keying with an iambic keyer--i.e.
hold both paddles together and you'll get di-dah-di-dah-di-dah-di-dah.
The squeeze technique takes some getting used to but you can cut down on
motion on some characters like "Y", "L", "Q", "A", "N", etc. by
squeezing both paddles at the same time during a portion of the
character. Using a dual lever paddle would be a waste on a keyer not
capable of iambic keying (but most are these days).

> WA2SI

Dual lever paddles provide separate levers for dits and dahs while the single lever models use one for both which is moved both directions. The dual job can be used in Iambic mode. You better look that one up. :-)

Actually its not too tough to describe. Iambic mode is a "selfcompleting" CW character generating feature of most of today's electronic keyers. For instance, if you want to send the letter K, you press and hold the dah paddle, then immediately touch and release the dit button which tosses in a dit after the first dah (don't hold the dit paddle or it'll toss in two dits or more). Then you release the dah button after the dit comes out, and your letter K is complete. To send the letter X, you touch and hold the dah paddle, toss in two dits with the dit paddle, release it, then release the dah paddle at the right moment. And so on through the more complex characters in the alphabet. Sounds a lot worse than it is. Iambic sent code is easier to send when you get used to it, and that won't take you long.

Try it, Bert, you'll like it.

Also the dual paddle can also be used in the conventional way to form the characters also. I prefer them. They are just smoother and to me, easier to use.

Face it, Jim. The Putzmobile was a meter reader and circuit breaker resetter
at some obscure Army transmitter site in rural JA land. Spent most of his time
twiddling his thumbs. Wouldn't know zip about operating anything.

It didn't happen years ago and is even less likly today. One could argue
that the "do not divulge" was a no option choice for the applicant.
Bottom line, this is just an academic discussion totally apart from
reality of today.

> >> That would have to change. More $$

I believe this should be THE most important thing we could change.

> 5) Focus more on the basics and less on esoterics (like the "how much time
> do you have to notify the FCC about a station in space" questions)

Agree completely. Those space station questions were really
off the wall. There's no need either (IMHO)
for every extra to be knowledgeable about VE rules, etc.
Those that want to be VEs should be "qualified" as the
ARRL does today.

> Your thoughts?

See above.

Cheers,
Bill K2UNK

This isn't likly to be accepted by the FCC if other government
licensing tests don't grade accordingly.

> 4) Break each Element into subelements (say, Safety, Regs, Theory) or some

I believe this should be THE most important thing we could change.

> 5) Focus more on the basics and less on esoterics (like the "how much time
> do you have to notify the FCC about a station in space" questions)

Agree completely. Those space station questions were really
off the wall. There's no need either (IMHO)
for every extra to be knowledgeable about VE rules, etc.
Those that want to be VEs should be "qualified" as the
ARRL does today.

> Your thoughts?

See above.

How many more decades of interest will it take before you finally GET
INTO amateur radio, Len?

> >You call others posting here judges.
>
> Yep, you especially. With cause by lots of public evidence.

Who the hell are you? You aren't involved in amateur radio to any
degree whatsoever.

> >You take it
> >upon yourself to judge not only the state of amateur radio but those
> >radio amateurs who post here yet you are not a radio amateur yourself.
>

That's precisely what I'm doing then, Leonardo. I'm pointing out the
obvious.

> If one hasn't GOTTEN INTO amateur radio, they don't have a
> license, do they?

Look, Len, if you haven't taken the big leap after decades of proclaimed
"interest" and multiple years of sniping in an amateur radio newsgroup,
the odds are that you'll never have an amateur radio license.

> Why are those who have ALREADY gotten into amateur radio
> so adamant about those who have not gotten into ham radio
> be quiet and not discuss anything?

About those be quiet? I dunno, Len. If you know so much about it, why
aren't you a ham? What deep knowledge concerning amateur radio do you
have to impart to those of us who are hams? I've been here for years
and I haven't seen anything from you about anything except doing away
with code testing and keeping young people from holding licenses.

> Do those already in seek to force those not in to do exactly as

The FCC gets paid to regulate amateur radio. They are in charge of
administering amateur radio. You are not paid to regulate amateur radio
and are not in charge of administering amateur radio. Why would I sue
the FCC? I have no beef with the FCC. There's no one from the FCC
trolling here.

> By the fact that the US Congress passed the Communications

Lemme know when you make the Commission or Congress. Your chances of
becoming part of either body are larger than the chances that you'll
obtain that "Extra out of the box".

Let's cut the crap Brainiac and get down to the nits and grits. You
claim to have operated as a T5. You claim to have sent QSL cards to at
least some of those you worked fron a very rare DXCC country. However
the DXCC desk has stated that the ARRL has no record of any dxer
sending in any of your cards for T5 credit.
>
>
Additionally I've surfed all over the web looking any reference to
"Nï¿½IMD/T5" and "T5/Nï¿½IMD" but the ONLY place you show up is in a
recent search for info on your alleged operation by one of the
regulars in this NG and in the Brianiac Fan Club circuit who is also
trying to find any reference to your "operation". This is particularly
odd because a search for any even half rare and/or obscure dx
operations which actually happened will bring up a flood of hits on
the Web going back to Gus Browning's and Danny Weil's days.
>
>
How do you explain the obvious contradiction this brings up?? On what
bands did you operate? What modes? Who did you work from T5? Why
haven't they submitted cards for credit for snagging you as a T5?
Hmmm?

I'm the original holder of N2EY.

>But your point is well taken. 1x2's were not issued for many years
>beginning sometime in the 20's or early 30's.

From at least 1951, the FCC included provisions in the rules for the issuance
of specific preferred callsigns. Memorial club stations were provided for in
the rules. Also, a ham who had previously held a particular callsign could get
it back if still in the same area.

This latter provision resulted in at least one 1X2 call being issued to a
Technician, way back in the '50s.

There were also provisions to allow hams who moved to a new call sign district
to get a corresponding callsign, if available.

>And the zero district wasn't created until after WW2.

Yup, and that caused massive callsign reassignment in some places. Under the
old 1-9 system, several states were in two call sign districts, but that ended
when the 0 district was created.

>I got the call, assigned sequentially by FCC, in the 70's, as you
>said. It cost me not a dime, nor does it still. NOT a vanity callsign, that
>is a term which came about as result of vanity license plates for cars. Back
then
>1x2's were known as "preferred callsigns" since they were shorter.

One of the additional features of incentive licensing was the expanded
availability of preferred callsigns. The original 1968 requirement for a
preferred callsign was an Extra and at least 25 years experience. The
experience requirement was gone by the mid-1970s.

I got N2EY as the result of a move to WNY in 1977. No fee, no choice, they just
grabbed the next one on the list.

It was called Incentives. You learn, you demonstrate that you have learned,
you get rewarded. Some people would rather pout than respond. You'd rather
consider it jumping through hoops than learning. So you got left to pout outside
the loop.

Bert,

I use the Vibroplex Iambic Deluxe paddles. The AEA MM-3 keyer isn't made any more but can be found on the used market. The MFJ Grandmaster isn't a bad keyer either.

Thanks Dave,

I'm currently fidgeting around with a Palm Mini-Paddle/Code Cube combo for portable QRP work. I know that I want to get something for the shack though. After checking out the eHam reviews, I kinda felt attracted to the LI Mercury. I don't think it's available anymore so I started checking out the GHD series. (Which, BTW, led to my confusion re. single vs. double lever.) I'd really rather buy American though. Thanks again and take care.

>Prove the accuracy. Prove it by showing sources that others
> may verify.

Nothing will EVER be "proved" to you, Your Obscene Emailingness.

And even if we did show preent "names and callsigns" to you, of what good would it be to you?

You hold NO Amateur licensure, and hold no awards in ANY DX program.

Ergo your "participation" in this thread, which doe NOT involve the discussion of the Morse Code Test "question", is irrelevant.

Now...Go whisper tales of Rear Area Widget heroism in Mrs. Lennie's ear...I am sure she's waiting up for you.

>That little detail didn't disturb you one bit on fabricating a libelous
> home page on AOL just because you imagined you were "slighted."

Since nothing in it was erroneous, why should I?

>Rightly so since
> it was pre-loaded with plenty of libelous material to get you a
> very large loss in any civil court.
>

Yeah...Right. And then I produce the post in which you solicit a "copy" of your GROL, and the subsequent "copy" that WAS received...

Right along with reams of YOUR assertions on what an electronics hero you are...and then "claiming" that you sent the wrong file by mistake.

Uh huh.......

>It won't matter because you will not accept anything as truthful
> even if verifiable. You will only sulk and pout and scream "liar"
> because you can't bear to be countered in opinions by anyone.

You have no valid "opinions" here, Lennie. You left the Code Test Highway a long time ago.

> You will continue to insist my military experience was as some
> kind of "message clerk" because you love putting people down
> when they don't agree with you

For the last time, Your Lyingness...It has nothing to do with your differing opinions...It DOES have to do with your penchant for lying and antagonism.

>You ignored my statements of
> being a team supervisor, even if verifiable, because you live for
> the personal insult. That is your main task in here, to insult
> those who don't agree with you.

"Team Supervisor"...Of what? Duty rosters and rolls of perf tape?

THAT was exciting.

>That's a sad life you lead on this newsgroup.

Compared to yours, Lennie?

>Prove it by a source that others can verify. Proof is not done by
> insulting others. Proof is not done by imagining things and
> demanding others live in your imaginary world.

Lennie, I HAVE been in the "other world" of overseas operating. I KNOW the ARRL rules on what constitutes a "legal" DXpedition, INCLUDING the documentation required to attain that.

You obviously don't. You are "siding" with Burkie since he's the only person idiotic enough to come out anywhere close to being on your side. But then when I think about it, if I was so overwhelmingly outnumbered and outwitted by everyone around me, I'd want at least ONE person to blunt the obvious onslaught.

G'nite, yer Geezerness...Mrs Lennie is waiting for her RAW hero story to lull her to sleep...

I have a set of very lovingly cared for Brown Brothers iambic paddles.
I have used both the single and dual paddles, and I prefer dual. I find I
can get off of one side to the other faster and with a more natural swing.

But like the cary says..."Ya pays yer money' y takes yer chances!"

>>>Why do you claim to know more "truth" than the FBI?
>>
>> I didn't. You are, again, lying.
>
> was asking a question. How can a question be a "lie?"

An intentionally misleading "question" is a lie, Lennie. You intended to mislead or distrort truth.

Why did you have sex with your mother, Lennie? Grandma wasn't home?

>Eugene Rosenbaum, N2JTV, was assigned to C Company, 8235th
> Army Unit, at the same time as I, also worked at ADA transmitters.
> We were both billeted at Hardy Barracks. Hardy Barracks is so
> named in honor of one of the 8235th AU signalmen killed during the
> first two weeks of the Korean War.

Why do you find it necessary to include references with dead soldiers to any discussion of your "service", Lennie?

I resided in numerous Marine Corps barracks and was stationed at numerous bases named for Marines who were killed in the line of duty. I am sure many others herein were also stationed at bases named for Sailors, Soldiers or Airmen who were killed in action. No one else feels compelled to so closely associate where they slept with war dead as you do?

Why?

>None of that is "misrepresentation." None of that is "antagonistic."
> It is verifiable truth.

And when presented within the context of your post, just one more humiliating and shameful RAW hero-association attempt.

THAT'S ugly, Lennie.

>...and I am simply stating verifiable facts...which you keep saying
> are all "lies."

You do manage to tell some basic truths, Lennie. But even Satan has done that in a pinch.

>> Still addressed above. You served...Got your DD214 honorably before
>you
>>pissed off enough people to get Article 15'd.
>
> Incorrect. A "DD-214" is nothing more than a release from active
> duty.
>
> I have an HONORABLE DISCHARGE from the United States Army.
> Received in April, 1960.

The OFFICIAL document that substantiates that "Honorable Discharge" IS the DD214, Your Putziness.

>That is verifiable truth.

Only when you get it in the right order.

>At no time was I ever charged with any article in the Uniform Code
> of Military Justice. At no time was I ever charged with anything
> in Army Regulations ("ARs") or Special Regulations ("SRs").

I didn't say you were, Lennie...

>> Still addressed above. You served...Got your DD214 honorably before
>you
>>pissed off enough people to get Article 15'd.

See....I can play the "twist the words" game as well as you.

Sucks, huh...???

>Attempting to "charge" me with any infraction of UCMJ or any
> military regulation 40 years later is silly, meaningless, and
> unproductive.

I didn't "charge" you with anything, Lennie. I said it was a good thing you got out BEFORE you DID get charged with anything by anyone.

>I merely state it. What I state is correct and verifiable.

Uh huh...Did you enjoy having sex with your mother?

>I never claimed to "single handed passing of any messages." Given that
> Army radio station ADA handle an average of 220,000 messages a month
> during 1955, it would be impossible to "single handedly pass" that many
> messages.

You didn't say "single handedly", however you DID make the original post saying "...I relayed-transmitted".....No "we" as in that post, Lennie. You spent a lot of bandwidth backing up from that one, and not altogether convincingly.

> I was never a "rear area radio clerk."

Then which designated warzone wre you in?

>You are being silly, meaningless, and unproductive in trying to fabricate
> something that isn't true.

I am not.

However YOU are by repeatedly associating yourself with soldiers who died
in combat 3 years prior to your arrival in-theater, and even MORE foolish by
trying to "debate" Amateur Radio policy issues when your scope of experience is
no wider than this newsgroup.

>You have proved absolutely nothing in here except an ability to froth
> at the keyboard, venting fury in a wrath most unbecoming to sane

As mentioned in another thread, I love my Brown Brothers paddles, however they are nolonger in production (guess I could say the company is DEFUNCT).

Unfortunately I don't use an external keyer right now. My Yaesu FT757GX clips the first element of a character if I try to use full break-in over 15 WPM or so.

Think my next rig for Amateur use will be one of the TenTec rigs...Never heard one on the air in CW that didn't sound like a Nightengale!

"Feel" means a lot, so it's a lot like shotgunning. If the gun handles right for you, and comes up right, doubling on a covey rise is a snap. If not, well.....
It would be nice if you could visit a vendor where they have a few on display that you can get your hands on. I have four different iambic paddles, two are Vibroplex brand, one of those is a magnetic - hold version. But my favorite is the other mechanical spring type Vibroplex. I bought it used at a small ham radio store near Salt Lake City. When I handled it on the counter, I knew I wanted it - it had the right "feel".. It's also easier to adjust and "fine tune". And it just has a better more natural feel while using it, for me. Your tastes may vary.
When you get an iambic paddle that you can use well, easy sending of good CW with it is a effortless. That is, until arthiritis starts messing with the fingers.That can clabber things up a bit.

Dick

Funny you should say that, Steve. I'm currently considering the Jupiter or the newer Argonaut V. When Santa Spouse offers...you just don't refuse. I've read reports/reviews that the Elecraft K2 offers the same level of performance as the premier rigs, i.e. FT-1000D, IC-756 PRO II, etc.. You've got to build it though, which is really no obstacle...but it's certainly NOT "plug & play."

For paddles, the Kent double paddles would be my choice. Great quality, feel, and incredible adjustment flexibility at a "workingman's price". Avoid Bencher and MFJ junk.

For a keyer, shop the hamfests/eBay for an AEA GrandMaster.

Actually, he was a big-band musician in the 30's and
40's - one of those people to whom code skills come very
naturally.

> ..... but do we know how many hams who were stimulated
> by making their way through incentive licensing would up as
> degreed electronics engineers?

I met quite a few in the 50's and 60's. But by 1970 I
didn't meet anyone coming out of school who had gotten
interested in it through ham radio. Just my personal
life experience. I will say that the RF types I did
encounter professionally were more aware of the
existence of amateur radio and its technical challenges
than the computer jocks, but, alas, were too busy to
get a license.

> No one could even remotely foresee what has happened in the
> interim years. To expect FCC to act too much differently seems
> unrealistic.

I know. I expect god-like prescience from government
agencies in exchange for the god-like powers to create
and destroy (or merely regulate) that they possess.

> Throughout this period Morse was in full usage in the maritime
> world, as well as significant use in military ops, though of

> But no question, ham radio generates few of the type of skills
> it was once noted for providing to the job market.

My take on the situation was that by 1968, the only
significant usage of manual radiotelegraphy was by
the Maritime Service. And that usage, from a
national economic standpoint, was miniscule compared
to, say, land mobile radiotelephone. It would have
made more sense to stronlgly encourage hams to develop
skills to support that endeavor.

> (some snippage here)...
> There is little about qualifying for any ham radio license
> today that translates to the current job market. I doubt
> anything FCC could have done in the 60's could have changed
> that.

Yes, but it was a very explicitly stated goal of
incentive licensing to do exactly that - make
amateur radio serve national goals in achieving
technical capability to compete better militarily
with the post-Sputnik USSR and later in the global
economy with Japan and Europe. All I'm asking
for is that those responsible for the policy-
making decisions be held accountable.

> Looking at it from a late 1950's perspective, when FCC began

> personal rights bazaar.

I think the problem was in the FCC's (and other's)
attitude that it was up to them to be the bad-ass
drill sergeants to what they saw as a bunch of lazy,
good-for-nothing, sad-sack ham radio operators.
If the "learning mode" that they wanted to instill
had no over-arching, realizable national purpose, no
war to win (to extend the military metaphor) then
it was completely arbitrary and might just as well have
been about fungal botany as radio-frequency technology.
If it was a payback for frequency usage, then the
currency should have been valuable to the recipient
(the US gov't). But let's face it. Hams beeping away
furiously or cramming with study guides really isn't
that much in demand, even in Washington, DC.

> I think you expected too much of it all. Hams who have had no

> a bit of a stretch to pronounce incentive licensing a failure
> merely because of the Morse code requirement.

I expect that licensing policy should reflect real-world requirements, particularly if I am being asked to commit my time and energy in response to that policy-making. Either the license requirements are there because they serve immediate regulatory purposes or they are there to serve the more global, national-interest ones. Incentive licensing explicitly cited the latter as its justification for existence and I just want to know, at the end of thirty some-odd years, if those purposes have been met.

What I considered particularly egregious about the code-speed requirements were that, on the average, they required a substantial amount of preparation time and appeared to serve no national purpose in meeting international technological competition (except in DX contests, I suppose). The fact that the FCC saw no value in maintaining the higher-speed requirements, and could only cite treaty obligations for holding onto 5 wpm, reinforces my view of the subject, but also leads me to question the value of the entire premise of incentive licensing. Is it really serving any purpose at all if one of its components, many would say its largest, can be dismissed so easily.

> In retrospect it probably was not a good thing to require full
> code qualification for all hams, but it seems there was no easy

> is, for an awful lot of hams.

There is always pure political reality to consider in any change in policy. I agree with you completely that just about any change will spark opposition from one quarter or another and a struggle will ensue. The

current path does seem to be the one of least resistance.

>> higher code-speed requirements for higher class licenses.

N2EY:
> Perhaps - but the FCC thought that increased code
> requirements were a necessary part of the license
> process. The Extra class license was added (actually
> re-created) in the 1951 restructuring.

Yes, but the Extra was nothing more than fancy wallpaper
until incentive licensing gave it real legs by granting
its holders exclusive frequency allocations.

The derailment I allude to was the fact that with technical
exam simplification, creation of the VE system and advances
in the state of the art, the code test became the
raison d'etre for the Extra. Even in 1968, the Extra-class
technical exam was dismissed as insignificant. The attitude
was that any TV repairman or radio disk jockey could pass
it with only a little study, as they regularly did with commercial
radiotelephone licenses. The 20 wpm code test, it was thought
(and still is thought) was what separated the truly committed
from the technically savvy slackers.

But the national interest, identified as Sputnik response, etc,
was best served in expanding the technical knowledge base, not
in creating a large pool of manual radiotelegraph operators.
But the latter was exactly what incentive licensing accomplished.

>> Eventually, getting an Extra class license was all
>> about making 20 wpm and not at all about demonstrating
>> technical competence.

> I disagree! It was about both, for me anyway. But I can
> see where a person with some knowledge of theory would
> have to focus most or all of their efforts on code, just
> as someone skilled in code would have to focus on theory.

Just compare the respective populations and you will see
that getting an Amateur Radio license, particularly a
General/Advanced or Extra, was all about developing code
skill for anyone with even a slight, passing interest in
radio and electronics.

>> ...we hams may have relegated ourselves and our
>> avocation to the dustbin of history

> I disagree very strongly! Let's do some what-ifs...

> Suppose the FCC had somehow been convinced, in
> 1963-68 to leave the license situation the way
> it was. How would that have helped amateur radio
> expand or modernize?

For starters, it wouldn't have disenfranchised the
General-class operators. E.F. Johnson might still
be making amateur equipment. I dunno. Too much of
an alternate-universe scenario. My point was that
incentive licensing DIDN'T help amateur radio to
expand or modernize.

> One of the trends that the FCC was concerned about
> was the increasing amount of 'appliance operating'
> by hams in the early 1960s. What FCC failed to
> understand was that this trend was logical and
> natural.....

I know. I expect god-like prescience from government
agencies in exchange for the god-like powers to create
and destroy (or merely regulate) that they possess.

You're right, they really couldn't see the semiconductor
revolution bearing down on them, particularly in its
high-circuit-integration manifestations.

> (detailed description of decline in home-building
> among amateurs over period 1968 to present
> deleted - see original post)

> These trends were all happening before incentive
> licensing, and the rules changes did little to stop them.

And that's the Monday-morning-quarterback call on
incentive licensing from here in the 21st century --
it failed to accomplish its goals.

There is no voodoo or magic associated with RF
propagation. There are several perfectly sound
technical reasons why it is beneficial to occasionally
sacrifice a goat in your antenna field.

Oh? I have heard MANY descriptions of the Extra test, and "insignificant"
was never one of them!

>The attitude
>was that any TV repairman or radio disk jockey could pass
>it with only a little study, as they regularly did with commercial
>radiotelephone licenses.

As they should. These licenses were not meant to be a determiner of
advanced theory comprehension...only that the person being tested was
"competent" in accepted practice.

>Just compare the respective populations and you will see
>that getting an Amateur Radio license, particularly a
>General/Advanced or Extra, was all about developing code
>skill for anyone with even a slight, passing interest in

I dunno...I had to bust those books pretty thouroughly in order to pass
the tests! The code, on the other hand, was "there", but not an obstacle.

Really, Brian. You asked for a citation regarding the "why" of your not holding credentials to make a judgement on what constitutes good amateur practice. I invite you and anyone interested to peruse your past comments on your operation from Somalia and your problem with my 6m operation from Tanzania. Your material on pileup handling is also a source of gems in the rough.

You've just admitted violating your own high ethics. Did you ask each
contact if he was operating within his band allocation (and follow the
request with "QSL?")?

> > I don't need your QSL, Brian. I
> > have a T5 card which was accepted for DXCC.

It was a legit Italian with a T5 call on 20m CW back in the late '70s. As I recall, I even worked my old Swedish pal Bertil Hall from T5 near the time you were there. Of course he was with the United Nations and I'm sure he had valid written permission.

Can you explain why no one has ever submitted a T5/N0IMD QSL card for DXCC credit?

>
>Yes, but the Extra was nothing more than fancy wallpaper
>until incentive licensing gave it real legs by granting
>its holders exclusive frequency allocations.

There's more to it. Back in 1951 the FCC restructured the license system, and the Extra was meant to replace the Advanced. Under that restructuring, no new Advanceds were issued after Dec 31, 1952. The incentive for the Extra and Advanced was that only they had the use of 'phone (any 'phone mode) on the ham bands between 2 and 25 MHz. And 160 was a mess of LORAN at the time.

Think of what that plan would have meant! The plan had been worked out over several years prior to 1951. ARRL was not the only amateur radio group involved, either.

But in mid-December 1952, FCC simply dumped that part of the plan and gave all operating privs to all hams except Novices and Techs. No NPRM, no debate, nothing, just an executive order. HUH?

Nobody I've run into seems to know why the sudden about face.
>
>The derailment I allude to was the fact that with technical
>exam simplification, creation of the VE system and advances

What technical exam simplification? I have the old LMs. The tests for Advanced and Extra went far beyond the General.

>Even in 1968, the Extra-class
>technical exam was dismissed as insignificant. The attitude
>was that any TV repairman or radio disk jockey could pass
>it with only a little study, as they regularly did with commercial

>radiotelephone licenses.

Without the actual tests, we can't really know.

But the point of amateur radio tests is not, and has never been, to prepare hams for jobs. The amateur tests should be about what hams do, not what other services do. Otherwise, we'd have questions about FM stereo and HDTV on the amateur exams.

>The 20 wpm code test, it was thought
>(and still is thought) was what separated the truly committed
>from the technically savvy slackers.

Maybe in your circles, but among the hams I knew, and know, 20 wpm was just no big deal. Compared to professional standards of radiotelegraphy, the amateur tests were easy.

>But the national interest, identified as Sputnik response, etc,
>was best served in expanding the technical knowledge base, not
>in creating a large pool of manual radiotelegraph operators.

FCC thought very differently. Perhaps the shortage of qualified marine ops had an influence.

>But the latter was exactly what incentive licensing accomplished.

Simply passing a 20 wpm test once does not an operator make. Even with the medical waivers being added in 1990, only about 12% of US hams got Extras - until April 2000.

>>> Eventually, getting an Extra class license was all

>For starters, it wouldn't have disenfranchised the
>General-class operators.

The Extras and Advanceds sure felt disenfranchised in '53. Some were mad for a looong time!

>E.F. Johnson might still
>be making amateur equipment.

I don't think so! EFJ and some others went out of the amateur biz because they did not adapt to the new reality of the amateur SSB transceiver. Heck, in '65 they were still trying to sell the Ranger 2 AM/CW 50 watt transmitter at a price that would buy a nice 100+ watt SSB transceiver.

EFJ developed the Avenger SSB transceiver, which was way ahead of its time. But it cost so much to make that it never reached the market. Fewer than a dozen were made.

EFJ's main ham market was AM rigs, and when that market dried up, so did EFJ. Same for Hammarlund.

> I dunno. Too much of
>an alternate-universe scenario. My point was that
>incentive licensing DIDN'T help amateur radio to
>expand or modernize.

Sorry, I don't buy it. To make the claim that IL didn't help believable, you have to present a description of what would have happened without it.

Maybe EFJ would have stayed in business, and AM would still be king. Would that be progress?

It's interesting to note that the number of US hams grew steadily from 60,000 in the years immediately after WW2 to 250,000 in 1963. Then it stalled at the quarter-million mark for most of the rest of the '60s. But after IL was in place, the growth resumed. Of course there are lots of other factors.

Wrong identification. The "putzmobile drivers" are K4YZ and
his grizzled old war vet buddy, W3RV.

Interesting "technical opinion" from another grizzled old war vet...
whose claimed Army schooling at Fort Monmouth was TV
studio production. Did Carroll ever leave CONUS?

ADA was an "obscure" radio station? Hardly. In the 1950s it was
the third largest HF communications station in the US Army. The
receiver site was a joint Army-USAF operation with the largest

antenna field in the world at that time.

At what Army radio station did Carroll work during his tour of duty?

Was he ever responsible for keeping outbound message traffic going at a rate of 220,000 per month at any time, 24 hours a day, 7 days a week?

>
> We're waiting......

I've never claimed to be a "DX op from some exotic location."

I did once "work" the moon from MSFC, specifically the ALSEP. Quite legal, too. The moon was then about a quarter million miles from earth. Got confirmation back in 3 seconds. :-)

Neither Japan, Korea, or Okinawa were considered "exotic locations in the 1950s. Those who were responsible for 24/7 communications across the Pacific region to San Francisco, Hawaii, Anchorage, Seattle, Manila, Okinawa, Pusan, Seoul, and Saigon from Tokyo didn't think of any of it as "DX." They were simply "radio circuits" and all were obliged to operate continuously, 24/7, on HF.

Nowadays and even a decade before today, the US military routinely does worldwide communications via satellites, as long as required. They have the long-distance capability in troposcatter microwave systems or HF systems.

>>You were sent FIVE files through attachments in private e-mail.
>> The first two were incorrect, mistakes. The next three were
>> the correct ones.
>
> Which means that Mr. Professional Electronics Engineer has an error
>factor of 40%.

Tsk, tsk. Mistakes can happen to anyone, can't they? :-)

Or did you think you were so snookered that your instant rage boiled over to creation of an AOL home page and new username just to attempt "attacking" me personally? Tsk, tsk. AOL took care of that. Wipe-out. Bye to libelous home pages. :-)

> Yous sent two obscene e mails in response to a solicitation YOU made for
>something else, and I am supposed to TRUST what you send me in e mail....?!?!

I never sent "two obscene e-mails." The second mistaken file was a PowerPoint Presentation, a simple cartoon of an emu saying "Have a nice day." :-)

The first mistaken file was a nice-quality picture of a converted B-26 over a forest.

How any current or former USMC member could possibly think that is "obscene" is a question that can only be answered by a psychiatric specialist. Everyone else who has seen it thinks it is quite humorous. Don't break your humerous over lack of humor.

>>You refused to open any of four after the first one. Why?
>> No guts? Fear of a "virus?" Unwilling to accept truth?
>
> I never doubted your GROL, Lennie. I responded to the solicitation just
to
>see if it was sincere.

Your "response" was to refuse to look at anything after the first.

Your "response" was the creation of an AOL homepage and new screen name full of vile libel directed to no one but me. As I said, AOL put a stop to that as soon as they were notified.

> Even when the page was open (with over 60 hits before AOL canx'd it) you
>were flailing about, claiming you did no such thing...Then you changed your
>tune and "made a mistake"...Uh huh...yeah...right...

I explained what happened in public. I DID send three correct
copies to you, one a day. You claimed you did not open any
of them.

I have to ask again, why did you not open them to see what they
contained? Were you afraid of seeing a verification of truth?

Or isn't your purpose in here really some sort of personal catharsis
to vent personal frustration and anger against an object you feel
is defenseless?

> What you did was lie. Or shall I say "FRAUD"...??? For a FRAUD is what
>you are, Lennie. In THIS forum or any other.

I supplied verifiable truth of claims in regard to my first Commercial
First Phone License certificate. Three separate private mailings.
That isn't "fraudulent."

>>Prove the accuracy. Prove it by showing sources that others
>> may verify.
>
> Nothing will EVER be "proved" to you, Your Obscene Emailingness.

The mailings were intended to show existance of documents to others. The FCC information on them is sufficient to verify the existance of the document and a license grant from the FCC.

You apparently do not want to see verifiable truth. You have shown past difficulty in dealing with the truth.

> And even if we did show preent "names and callsigns" to you, of what
>good would it be to you?

Such could be verified through other reference sources.

> You hold NO Amateur licensure, and hold no awards in ANY DX program.

I've never claimed holding (properly, being granted) an amateur radio license. I've held a commercial radio license since 1956.

I haven't "worked DX" in the amateur sense of the word. Nearly a half century ago the US military routinely worked long-distance radio circuits 24/7 on HF.

> Ergo your "participation" in this thread, which doe NOT involve the
>discussion of the Morse Code Test "question", is irrelevant.

Oh, are you also one of the "moderators" in here? :-)

Consult with Judge Heil. He thinks he has "authority" over who is allowed to post in here. :-)

> Now...Go whisper tales of Rear Area Widget heroism in Mrs. Lennie's
>ear...I am sure she's waiting up for you.

There is no "Mrs. Lennie." I'm reading this in early afternoon, local time. My wife is watching television. When the US Open Tennis is on we will both watch that.

My wife knows all about what I did in the US military, both as a servicemember and as a civilian working for DoD contractors. We have no secrets from one another.

>>That little detail didn't disturb you one bit on fabricating a libelous
>> home page on AOL just because you imagined you were "slighted."
>
> Since nothing in it was erroneous, why should I?

What you thought was "correct" was simply subjective personal
opinion. As such it was strong libel. AOL scrapped it as soon
as they were notified. They won't carry vile libel of that sort.

> Yeah...Right. And then I produce the post in which you solicit a "copy"
of
>your GROL, and the subsequent "copy" that WAS received...

Make up your mind. For weeks you've been saying that you
"never opened" any of the correct scans sent in e-mail. Now you
say you did? Which is it?

> Right along with reams of YOUR assertions on what an electronics hero you
>are...and then "claiming" that you sent the wrong file by mistake.

I've never claimed "heroism" in anything, anywhere on the Internet.

If you think I did, then you have an enormous problem in reading
comprehension...or an overworked imagination.

As to my occupational statements, those are all verifiable, true
statements. I've given the references in here for anyone to verify.

> For the last time, Your Lyingness...It has nothing to do with your
>differing opinions...It DOES have to do with your penchant for lying and
>antagonism.

You could correct that by substituting "confrontational challenges"
to "lying and antagonism." Persistent confrontation. :-)

You have repeatedly said my opinions are "lies." That's impossible.
Opinions are just opinions.

> "Team Supervisor"...Of what? Duty rosters and rolls of perf tape?

[try to stick with some semblance of continuity in sub-threads]

Team supervisors were responsible at ADA transmitters operations
by a dozen men in a team. No duty officer (commissioned) was
personally present during swing and midnight shifts.

ADA did not use "perf tape" at the Teletype Central. Chadless
punching was done to permit printing of the message so that
relay operators could read the circuit addresses. The amount
of p-tape used would fill a two-story hopper whose cross section
was about 3 square feet...every day. Open-punch tape was
used in Model 17 and 19 teletypes, but rarely required.

> Lennie, I HAVE been in the "other world" of overseas operating. I KNOW
>the ARRL rules on what constitutes a "legal" DXpedition, INCLUDING the
>documentation required to attain that.

[you seem to be confused as to which sub-thread you are addressing]

Were you in Somalia 1992-1993?

If so, did you operate from there?

Do you have any khat left in your stash?

> G'nite, yer Geezerness...Mrs Lennie is waiting for her RAW hero story to
>lull her to sleep...

As I said, there is no "Mrs. Lennie." My wife is familiar with what
I have done. Her mention is irrelevant and disrespectful by you.

Who are you talking about?

No one in here has any "authority," written or otherwise, to ban anyone, shut them up, or "rule" on anything.

> Brian busted regualtions six-ways to Sunday by not having the proper
>documentation for his "operation" in Somalia.

Burke cited the ARRL listing. Brian Burke explained his proper military permission to operate while on active duty.

Three individuals in this newsgroup have charged him erroneously with bootlegging in 1992-1993. Illegal operation is a serious offense.

Has any legal authority arrested Burke or charged him with any criminal activity for the 1992-1993 operation in Somalia? No.

What we have here (in another sub-thread) is simply some loud-mouth (or rather loud-typing) individuals who get their jollies out of saying bad things about others. You are included.

You must PROVE your charges to make them valid. You have not.

>
> And experience that you relate as a licensed Amateur HAS to be fabricated
>from imagination, Lennie, because THAT is the experience we are discussing.

No. I don't "relate" anything AS a licensed radio amateur.

The non-discussion going on is really your vile contempt
spouted on anything in here that upsets you. Tsk, tsk.

> And I for one DO consider that a problem, since you have NO first hand
>experience IN Amateur Radio...

Then by all means join Judge Heil in a class-action lawsuit against
the FCC on behalf of all US radio amateurs...basing the claim that,
since the FCC does not require anyone there to be licensed in
amateur radio, they cannot possibly regulate US amateur radio.

The FCC grants amateur licenses. The FCC decides on all
matters of amateur radio regulations, from the choice of petitions
to make into RMs on through R&Os. The only ones who can be
in true "first hand experience" in amateur radio licensing matters
are those who have worked IN the FCC structure.

"You have NOT worked in/for the FCC, therefore you have NO
experience in amateur radio regulations."

Note the quotes. That statement has as much validity as
Robeson and Heil's insistance that the only ones able to talk
amateur policy are those IN amateur radio. It's an artificiality.
However, if the Robeson-Heil condition is a criteria, then the
above statement in quotes is equally valid.

Only one identifiable regular in here would qualify - Phil Kane.

>>It would be nice to see a few rounds of you against KH2D
>> after you became his target.
>
> Jim and I have common ground from which to "debate" things, Lennie.

Heh heh heh. You couldn't debate anything with Jim Kehler for five minutes...even if Kehler's mouth and hands were taped together. You would LOSE under any condition. :-)

> This isn't the entertainment NG, Lennie. It's about Amateur Radio
>policy...A subject which you have little experience OUTSIDE of this
>NG...Which is to say you have NONE.

It seems to be about fish stories...like claims of expert marks-manship...or US foreign policy in regards to countries without governments...but mostly its about a small group of regulars who abuse and insult and denigrate any or all who do not agree with their viewpoints. It is their "chat room" where they can work out personal frustrations in words, perhaps thinking that their targets are on the other side of the screen looking in as they write. :-)

How many more decades will it be before the FCC is required to
get amateur licenses and "practical experience" therein to regulate
US amateur radio? :-)

>> >You call others posting here judges.
>>
>> Yep, you especially. With cause by lots of public evidence.

>
>Look, Len, if you haven't taken the big leap after decades of proclaimed
>"interest" and multiple years of sniping in an amateur radio newsgroup,

>the odds are that you'll never have an amateur radio license.

Odds are strongly in favor of my thinking some of the
already-licensed radio amateurs aren't worth associated
with as human beings. When confronted with subjects to
discuss, they can only "debate" by personal insults against
others.

>> Why are those who have ALREADY gotten into amateur radio
>> so adamant about those who have not gotten into ham radio
>> be quiet and not discuss anything?
>
>About those be quiet? I dunno, Len. If you know so much about it, why
>aren't you a ham? What deep knowledge concerning amateur radio do you
>have to impart to those of us who are hams?

True to an extent. Nobody can tell Judge Heil much of anything.
:-)

>I've been here for years
>and I haven't seen anything from you about anything except doing away
>with code testing and keeping young people from holding licenses.

Test element 1 for General or Amateur Extra class licenses
is still the morse code test. It hasn't gone away.

I made one of many suggestions to NPRM 98-143 in January, 1999,
to have a lower limit on age for new licensees. I've never bothered
with pursuing that since. Several in here get full of rage and fury
over that and expect to renew a "battle" over it, bringing it up every
half year or so. :-)

Heh heh heh...for three years there's been some kind of "need" to
fight over that? Did you guys all have such a terrible adolescence
or something that prompts such rage and fury over that? :-)

>> Do those already in seek to force those not in to do exactly as
>> they did? Why? How did they get into such control over others?
>> They answered less than two hundred written questions and
>> passed a morse code test. That's hardly a degree-earning
>> test, isn't it?
>
>Why don't you take one and find out?

Why? Don't you want to preserve the fish-story flavor that the TEST
is some kind of Nobel-winning accomplishment? :-)

Was it a "lifetime achievement award" in your case? Or what?

>> There is nothing different about radio physics because a human
>> agency has created different services and definitions thereof.
>
>Surprise! Ham radio is not only about the physics of radio!

True. But what percentage of licensed radio amateurs KNOW
anything about the physics of radio, other than test questions?

Surprise! A paltry small percentage.

Do you want a quote of one of the five defining paragraphs in
97.1 or can you read by yourself now?

>> >You comment to the FCC on amateur radio regulation yet you are not a
>> >radio amateur yourself. You've now inserted yourself into a discussion
>> >on amateur radio operation from Somalia and yet you are not a radio
>> >amateur yourself.
>>

>and are not in charge of administering amateur radio. Why would I sue
>the FCC? I have no beef with the FCC. There's no one from the FCC
>trolling here.

The FCC does not require any members to be licensed in US amateur
radio and they MAKE all the rules. How can they do so if they don't
hold an amateur license or "practical experience in amateur radio?"
:-)

>> Go ahead, make the Supreme Court's day...sue the FCC and
>> Congress for not being licensed as amateurs when they aren't
>> required to have amateur radio licenses.

Let me know when you get into the US Congress or the FCC and
become part of the legal process regarding policies...without any
"practical experience" in either. Sort of like a Traficant going around
in a traffic circle. :-)

True. The present-day situation is that fully one-third of all US
amateur radio licensees are in the Technician class category.

What are the present demographics in ARRL membership?

I haven't seen any ARRL demographics in several years, maybe
someone can tell me if the Technician class is no longer the
least-represented class in membership?

We'll get you straight yet! No problem, this is how ya learn.
>
>
For the keyer itslf I keep it really simple. I have one of the little
$50 MFJ keyers. It can run Iambic modes A & B, it's very compact &
light, very reliable and runs forever on a 9v internal battery and it
runs just as well on any 12vdc source. The only feature it doesn't
have is memories. Which are not particularly useful except in
contests.
>
>
Per other posts I'm also a Kent paddles user and I wouldn't have any
other. There are much more expensive paddles but from my perspective
but there aren't any better paddles at any price. The design is dirt
simple, the things are built like a tank, the workmanship is superb,
and they have best "feel" i've ever experienced. And once you adjust
them the adjustemnts stay put. I also have one of the monster Kent
KT-1 straight keys, 'nother whole story . . !
>
>
As Dick pointed out though paddles are kinda personal and sorta like
women, we all have our own tastes in both women and paddles so beware.
But I had mine in operation in last year's Field Day and several ops
who owned other paddles used the Kent and the responses basically went
something like "Wow"!

Fer that matter, whatever does Putz have to do with any facet of ham radio? Bottom line, nothing. Only rrap, which ham rado is not.

When dealing with an individual of K7JEB's class it isn't a bit difficult to have a civil, intelligent exchange, even
if you don't agree on some points. He's one of the few you meet that make you think a code - free Extra isn't such a
bad deal for the hobby after all. Problem is there are far too few of him and far too many of the other kind. Putz &
his cub included.

Dick

No...you only make insinuations of impropriety aginst those who have, as
if YOU knew something about it.

>I did once "work" the moon from MSFC, specifically the ALSEP.
> Quite legal, too.

To "work" a station in Amateur Radio vernacular (and since this IS an
Amateur Radio newsgroup, that is the definition we will accept), you are
required to EXCHANGE callsigns and signal reports.

What YOU did was no different than screaming out your name at the Grand
Canyon and waiting for the echo...cuz that's ALL you did. Nothing more. I can
slide down to the Doghouse right now and hear my own echoes off the moon in
minutes. And it cost me a lot less to do it than it did NASA.

>Neither Japan, Korea, or Okinawa were considered "exotic
> locations in the 1950s

Who said they were?

>Nowadays and even a decade before today, the US military
> routinely does worldwide communications via satellites, as
> long as required. They have the long-distance capability in

What opportunity have you had to pursue it? You aren't capable of
inspiring rage and/or fury in me. You and your amateur radio fetish do
provide a few laughs though.

> >> Do those already in seek to force those not in to do exactly as

We've done this over and over and over. The DMV doesn't require its
clerks to have driving licenses. The FCC staff is paid to regulate.
You are not in the employ of the FCC nor are you a participant in
amateur radio. You aren't anything to amateur radio.

> quite humorous. Don't break your humerous over lack of humor.

And I stated under different circumstances it would have been funny.
However waht you sent was sent fraudulently.

You solicited the opportunity to send e mail of one thing, then sent
another.

You lied.

>I have to ask again, why did you not open them to see what they
> contained? Were you afraid of seeing a verification of truth?

And I said I never doubted your GROL, Lennie. But you blew your
opportunity at gaining any trust or respect with teh "errant" files.

>Or isn't your purpose in here really some sort of personal catharsis
> to vent personal frustration and anger against an object you feel
> is defenseless?

Defenseless? Over what? A pathological liar like you, Lennie?

My "purpose" here is to be as ready a thorn in your side as you'd be to
Amatuer Radio.

My "purpose" here is to constantly highlight the inaccuracies of your
rants and the fallicy of your hatred.

No more...No less...

>I supplied verifiable truth of claims in regard to my first Commercial
> First Phone License certificate. Three separate private mailings.
> That isn't "fraudulent."

When one weighs your claims of technical skill in things electronic, your
"error" is dismissed as an excuse for poor performance at best.

Try again. We are waiting for an "excuse" that makes sense.

>>Even in 1968, the Extra-class
>>technical exam was dismissed as insignificant.
>
> Oh? I have heard MANY descriptions of the Extra test, and
>"insignificant" was never one of them!

Now it is, Steve!

While I would not use the word "insignificant", Jim/K7JEB has a valid point. Those 'old' 1968-era amateur written exams were simply not very hard from a theory standpoint - if you knew some radio theory.

>>The attitude
>>was that any TV repairman or radio disk jockey could pass
>>it with only a little study, as they regularly did with commercial
>>radiotelephone licenses.

Yup - most of the learning those folks would need would be in the areas of operating practices and amateur regs.

> As they should. These licenses were not meant to be a determiner of
>advanced theory comprehension...only that the person being tested was
>"competent" in accepted practice.

But the goal of incentive licensing was to cause a large increase in the technical and operating knowledge and skill of hams by causing them to learn more. Lots more.
>
>>Just compare the respective populations and you will see
>>that getting an Amateur Radio license, particularly a
>>General/Advanced or Extra, was all about developing code
>>skill for anyone with even a slight, passing interest in
>>radio and electronics.
>

> I dunno...I had to bust those books pretty thouroughly in order to pass
>the tests! The code, on the other hand, was "there", but not an obstacle.
>
I passed the General and Advanced writtens in the summer of 1968, age 14. That was the summer when I was between 8th and 9th grade. I had no formal education in radio, but the tests were easy. Two years later I got the Extra, and the only reason I waited two years was because the FCC rules required it.

This was in the pre-Bash, pre-VEC go-to-the-FCC-office days. I wasn't a prodigy - there were younger hams than me passing those tests. How hard could they have been? That's Jim/K7JEB's point.

Amateur radio led me to EE school, where I got BSEE and MSEE degrees. Then on to a career in electrical engineering. Would that have happened without incentive licensing? Probably.

>
>The NTIA has come out against the 5.2 MHz secondary allocation
>for Ham radio. This will be the death or delay for a few years
>of a 5.2 MHz band. Oh Well...

I don't know about that, Keith. I think it will delay it a bit, but the ARRL does have the interference studies it did under the experimental license, and Amateur Radio ops are known for cooperating with band plans.

One certain agitator in this NG "dismissed" the ARRL's experimental stations as irrelevant since propagation on this band was already known. However it was situations just like this that the study was accomplished for. Once again good engineering practice and forsight may overcome the govenment's resistance to this allocation.

One of the caveats to the 30 meter band was just that very thing...Avoid certain commerical stations operating on the band. I am sure SOME interference occurs, but I've been on 30 since it opened and have never heard anyone intentionally harrassing the commercial ops.

If anything, maybe they will OK it initially with data only modes until other users can be moved or until avoidance plans can be liberally distributed.

Enjoy Randy! I liked how it "consumed" me, I
post twice a day, when George Busch WA3MOJ is
on here all during the day, posting on average 200+ times in a
month........ROTFLMAO!.....what a troll George is. All the harassing,
sexual innuendo, racist, accusatory style posts made towards practically
everyone here.
He's an extra class ham operator that talks like this here,
because he can't on the ham bands and in person, the true
epitome of a troll, why else would he have some 250+
screen nics and change it on average every 6 days.
So please George, spew your normal foul language
and have fun troll.....

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Hey Brainiac, I'd been on the air for 14 or so years as a General when
they dropped Incentive Licensing on us. Which I also very strongly
supported at the time. See my rant in QST on the subject. Many of us
who could operate in the 20-50wpm range back then did it easily in our
heads but most of us had a bad time getting 20wpm down on paper. So
yeah of course we copied w1aw in order to get the pencil running as
fast as our heads could. I took the test knowing I could copy 25wpm
solid on paper thankew w1aw and the ARRL. I don't know anybody who had
to upgrade to Extra to retain the privs who didn't use w1aw for this
purpose. Once in awhile I still copy w1aw to beat myself up in the
high-speed runs. Not that you would relate to a bit of it.

Comments concerning a electronic keyer.

Iambic for sure. Character spacing a definite plus, with 'weight'
adjustment another plus.

As for memories. Basically good for contesting, true. Also useful in CQing
on a dead band. Less wear and tear on your fingers...hi.

Incorrect.

Long-distance HF communications in the military of a half century ago were principally in the 4 to 18 MHz range, most circuits being 24/7, ranging from short distances to very long such as the path from Tokyo to San Francisco. Antennas varied from delta-match-fed dipoles to rhombics, the latter desired for the longest circuits. The AN/GRC-26, hut-mounted on a 2 1/2 ton truck bed with a towed motor-generator, included both a dipole and rhombic antenna "kit" with masts and guys, stowed under the bench seats of the hut.

The volume of messages precluded the one-operator, one-radio, handwritten or typed message form concept. Messages originated at command or department level at ADA, were transmitted via TTY to the TTY relay floor at Chuo Kogyo, NW of Tokyo, for relay to other units, either on landlines or short radio circuits to in-theater recipients or to the transmitters site or from the receivers site on circuits outside of Japan proper. The majority of communications was by TTY for several reasons: Higher rate (60 WPM); written copies at each circuit end plus readily-available p-tape for re-sending in case of some interruption; encryption could be done on-line. The volume of messages was approximately 220,000 per month in 1955 at ADA. Washington Army Radio handled about 1.2 million per month in the same year. WAR had the beginnings of automatic address preamble reading and forwarding by automatic reroute switching similar to what was later incorporated in AUTODIN.

Besides TTY, there were voice circuits, almost all on "commercial" format SSB (four 3 KHz BW channels simultaneous) with one voice channel used as a voice order-wire or command circuit, one voice channel for radiotelephone use, routing through conventional switchboard equipment accessible only to higher command levels. The remaining two voice-BW channels contained TTY of six to twelve separate circuits frequency-multiplexed ("carrier") either as single-circuit tone pairs or doubled tone pairs for frequency

diversity to overcome most selective fading effects. Each SSB voice channel was frequency-multiplexed into the 12 KHz RF bandwidth at the transmitter (or demultiplexed at the receiver).

Four of the radio circuits at ADA had time-multiplexed TTY to allow four TTYs on one radio circuit using FSK. This required all RF exciters and receiver decoders to replace polar relays with one-tube relay equivalents due to switching speed. RF bandwidth of approximately 1 KHz was retained, doctrinal FSK shift then being 850 Hz for both single-channel RTTY or "mux" RTTY.

There were two radio circuits handled by ADA that were in the "miscellaneous" category not to any one geographic location but flexible depending on need and situation. One was a back-up to an existing "fixed" radio circuit or for routine emergency tests. The other was principally for the FEC Hq. commander's aircraft, single-channel RTTY; third in line priority went to the MARS "station" (an office) use. While that one had OOK CW capability, it was never used as such 1953 to 1956; the special wire circuit carrying on-off keying from a central operating point was removed some time in 1955.

ADA's transmitters totalled 36 in 1953, ranging from 1 KW BC-339s to 15 KW PW-15s. That number was increased by 6 by 1955, transmitter site moved from an island in the Bay of Tokyo to an old WW2 airfield (used by Mitsubishi) north of Tokyo. That new site had its own electric power generation 24/7, 600 KWe in 1954 increased to about 800 KWe in 1955. The increase was necessitated by 40 KW Collins linear amplifiers for four Western Electric LD-T2 SSB transmitters.

The old transmitters site was coupled to Control at Chuo Kogyo by commercial telephone cables and had a partial back-up via always-on VHF radio relay (70 to 90 MHz AN/TRC-1) or UHF radio relay (220 to 250 MHz AN/TRC-8). The new transmitters site had four General Electric 24 voice channel microwave (1.8 GHz) radio relay terminals to replace all wire-line voice circuits. These were full-duplex, always on, two terminals in-use, the other two ready for backup. This "self-containment" in wireline and electric power was to reduce outages experienced with commercial Japanese services...it was not for security purposes.

The GE microwave terminals were designed for unattended operation (intended for pipeline telemetry and control) and had automatic switchover of both transmitter and receiver to running duplicates. There were no spares for the 24 voice channel pulse position modulation mux-demux section requiring about 280 vacuum tubes. Microwave relay was primary at transmitters, as back-up at Control, receiver site, and FEC headquarters. Several severe contingency plans included new AN/TRC-24 radio relay systems, a dozen

GRC-26s, a fixed blockhouse at Hq with two BC-339s and its own PE-95 motor-generator, and a 35 W output hand-cranked R/T that was never successful in the high RF field at transmitters. Based on efficiency of finals versus electric demand, the estimated RF field in transmitters' airfield location was about 300 KW total.

Control at Chuo Kogyo maintained a running account of approximate path loss on each radio path abetted by a medium-bandwidth receiver scanner-recorder at receivers and known propagation characteristics on HF at that time. A commissioned duty officer was always present to over-see all operations. The number of QSYs per day were 2 to 6 per radio path, depending on path location and length and time of year. The only severe HF shut-down was a 3 hour period on local midnight shift in 1955 due to solar activity. A General Radio frequency standard monitored all frequencies and measured the new frequency and shift for RTTY for each QSY, reporting on the command TTY circuit in-spec frequencies or deviation if out of spec. Traffic was not resumed after a QSY until frequency standards reported in-spec measurements.

Total time from order-wire receipt of a QSY from control until standards acknowledged measurement of frequency and spread (frequency shift) on the same order-wire was 3 minutes maximum on RTTY circuits, 1 minute on SSB circuits. WE SSB transmitters were pre-tuned to up to 10 carrier frequencies and crystal controlled. SSB QSY was quick due to presetting and servo-tuning...major delay coming from standards having difficulty reading the pilot carrier frequency with older GR frequency standard.

Receiver site was remote from transmitters and most other RF sources to preclude blocking effects. Most receivers were equipped for crystal control of LOs. Some R-390s were arriving there in 1955 to replace older receivers; GRC-26 systems already had R-390s on board along with one of the last mod versions of the BC-610 transmitter. Some of the FSK demods, outboard units, used automatic servo tuning to track mark and space frequencies, interesting to watch. Space diversity was used where possible, multicouplers allowing sharing of rhombics, the prevalent antenna at receiver site. That site served both Army and USAF highest-level communications needs.

Where encryption was required for sensitive material, that was done in a sub-basement level of FEC Hq at Pershing Heights. While that was manned by personnel of the 8235th, those individuals never "talked shop" away from their basement enclave and one had to be on a proper list scanned by two

separate levels of MPs to enter crypto's outer lobby. The encryption system/protocol/equipment is presumed to be the same as captured on the USS Pueblo several years later and possibly separately revealed by WO Walker, USN, to the USSR (James Bamford's book "Body of Secrets").
Encryption systems have undergone at least two full family changes since the mid 1950s. A small wire terminal for ordinary telephone/teleprinter circuits was located at the same sub-basement level (for technical convenience, not security). Encrypted TTY circuit monitoring on ordinary TTYs appeared as garble, making routine circuit checks by "bridging connections" difficult.

Maintenance of all equipment was by TMs and scheduled, switchover of equipment coordinated with QSY orders. For some equipment, the 1-ton plate transformers of BC-310s (10 KW FSK) in particular, had to be removed for depot repair at Yokosuka-Yokohama. That also applied to most of the external-to-building heat exchangers for BC-610s. Spares were kept in a large storage area at transmitters, enough spares to repair anything on-site except for very bulky items mentioned. Conventional single-emitter low-power antenna measurements were impossible in the high overall RF field at transmitters. SWR was "checked" by a fluorescent tube held on bamboo poles and run along the open-wire transmission lines if there was something suspect on a particular antenna; that was done only twice in 3 years, both time after windstorms. Outside-plant telephone personnel of the battalion did repair of antennas using pole hoist and auger trucks for wooden pole antenna and feedline supports. Most of their work was relocation of feedlines as circuit needs changed.

None of the above can possibly use descriptors such as "babysitting an RTTY repeater." In particular, "repeater" in the amateur radio concept does not apply to old HF radio communications in the military. It may apply somewhat to modern military communications where the message handling has reverted to Message Centers doing the most "work" using high-speed data terminals and automatic routing of messages to a destination through much-larger-quantity multiplexing. Data handling is now basically electronic and paper copies are required only at the ends of a message circuit. Modern signal equipment is described in detail in FM 24-24 freely viewable at the Army Training Command digital library.

While small-unit land military communications was handled by low-VHF HTs and back-pack unencrypted single-channel radios in the 1950s, it is now done by secure communications methods using FHSS and digitized-voice encryption. Modern military

land radio expertise in operation is relegated to proper entry of a "hopset" or keypad entry of network, mode, and other circuit entry...plus checks of built-in indicators such as battery voltage level. Radio-electronics technology advancement has removed the need for arduous knob and switch twiddling while operating or being a kind of encoder-decoder attachment for certain modes.

The point in military communications of today is that the content of the communications is the most important thing, not the way it must be done by certain specialists.

Like another hole in the head. When was the last time anyone heard of any fed agency, other than Corps of
Engineers, using HF? And even they must have left it behind, for the most part. I have one of their old 100 watt
Motorola HF desktop base stations that was surplussed. Neat rig, only xtal controlled. I played with it a bit.
Gotta get some sort of hi stability oscillator married up to it sometime. FBI? don't think so.

BFD. Putzie thinks he was the only army type who ever babysat an AN-GR26 bank. Ballz. Thousands of 'em were in service through Vietnam, at least. Most of the people who handled were not hams, though plenty were, Unlike Putzie, none of them are trying their damnedst to harrass hams on RRAP. My brother spent 6 years in Devens teaching Putzie-types HOW to babysit them.

Boy, that's abundantly clear. You think you have to submit cards for the stations who worked you for them to get credit for DXCC?

There's more and more vacant real estate showing up between your ears.

Len, like the ARRL and W5YI VEC's use of Farnsworth testing, my operation in
Somalia has been given tacit approval by the authorities because of a lack
of prosecution.

Brian

That isn't what I asked. Out of all of the folks you QSO'd from
Somalia, a rare one even when there is no war going on, doesn't it seem
strange that not a single individual has ever submitted a T5/N0IMD to
the DXCC desk for award credit?

Is that the class giving you problems. Okay, I'll read it in one of the
many ways it could be construed: You don't have permission to operate
```

but you did so anyway. How about: You don't have it in writing but you
once did.

I'm not going to argue that point. I'll agree that you have neither
orders for Somalia nor written permission to operate from there. I
guess you don't have a leg to stand on.

So far, we only have you confirmed as stupid. The others seemed to
realize the necessity for obtaining written documentation.

Why wouldn't I be a "Botswanan"? State wouldn't have permitted me to run commo at the American embassy as a foreign national. Why wouldn't I apply for DXCC from Botswana? I didn't care to. I never applied for DXCC in any of the seven countries other than the U.S. from which I operated. I was handing out counters for others, not running up a DXCC total for myself.

Ask him. He is as available as is your former commander--the one who supposedly issued verbal permission to operate.

My advice was directed to you since the matter seemed of great concern
to me.
It is still of no concern to me.

Yada yada yada......

YOU didn't set up the station...YOU didn't make the schedules...YOU didn't actually "handle" the traffic...You pushed the buttons and stirred the pot.

A clerk.

>The volume of messages precluded the one-operator, one-radio,
> handwritten or typed message form concept...(SNIP)

As I said...A clerk.

>Besides TTY, there were voice circuits, almost all on "commercial"
> format SSB (four 3 KHz BW channels simultaneous) with one
> voice channel...(SNIP)

An appliance operator in uniform.

>Four of the radio circuits at ADA had time-multiplexed TTY to allow...(SNIP)

More of same crap you've tried to impress us with about "your" operation...It wasn't "yours". It was the federal governments. You were just a clerk.

>The GE microwave terminals were designed for unattended
> operation...(SNIP)

And I am sure your presence was irrelevent in any case.

Over 12,000 bytes of USENET bandwidth to reiterate the same techno-babble you like to re-tell in order to impress yourslef.

Nice job, Your Putziness.

>The point in military communications of today is that the content
> of the communications is the most important thing, not the way

> it must be done by certain specialists.

YOU seem to be impressed with the "way" it WAS sent...Over half a century ago...And in no way related to PRESENT day Amateur Radio or Amateur Radio policy.

Putz.

Yeah. But when hams want a measly 150 kc at 5mc suddenly that becomes valuable spectrum, even if it is almost never used. Baloney.
Looks like more of the standard "defend it because someone else wants it and we don't give up anything, anytime, for any reason".

I don't know how true that is, Dick. I knew lots of Extras around here who were
simply active hams who wanted the top license, even before Incentive Licensing.
Their motivation was "Because it's there".

>unrealistic.

The other day I came across an interesting article in QST for August, 1973, pae 75. It was portions of a talk by W4BW, who some may remember as A. Prose Walker. He was FCC's Chief of the Amateur & Citizens Radio Division at the time.

His comments indicate some things under consideration at the FCC in those days (early 1970s). Included are such things as his thinking that the use of FCC engineers to give exams was a waste of resources, redefining the basis and purposes of the ARS, and requiring certain technical standards of amateur equipment. He also questions the validity of the Conditional license. Here's an exact quote:

(Remember, this is A. Prose Walker speaking in 1973)

"We have around 30,000 Conditional Class licensees now, and without doubt many of them obtained their licenses fraudulently. Even after moving to a city where there is an FCC Office, many refuse as long as possible to take the examination, and what they dream up as excuses would make your head swim"

WOW!

It should be remembered that Morse capability was required by law in maritime operations. All ships over a certain size had to have the capability and the operators - no exceptions.

>Only within the past decade has that use been
>drastically reduced, and at that, not totally eliminated in the
>military, particularly for monitoring of other operations.
>But no question, ham radio generates few of the type of skills
>it was once noted for providing to the job market.

That's because of the divergence of technologies between the ARS and other services.

Before, during and shortly after WW2, the technologies used by hams and the military/commercial folks were not radically different, for the most part. But after the war, the military and commercial services went in directions where hams had little interest. For example, AM broadcasting gave way to FM and FM stereo, TV and color TV. Military use of Morse with relatively simple equipment gave way to RTTY with much more complex equipment. A WW2 BC-342 is not much different from a typical '40s ham superhet - the '342 is more rugged, but radio-performance-wise and complexity-wise it's pretty similar. In fact in many ways the '342 is inferior! The same cannot be said of, say, the early-50s vintage R-390 series compared to most ham gear of that era.

>any service would be licensed which doesn't generate cash.

I disagree on that last part. FCC got a very rude lesson in what happens when a service is inadequately regulated. FCC was used to being able to maintain order with relatively little trouble.

Then FCC created the 27 MHz cb service, which required no tests at all. At first things were orderly, but by the late '60s the FCC had pretty much lost control of 27 MHz cb. And the cb culture bred freebanding, over which FCC has even less control.

>There is little about qualifying for any ham radio license
>today that translates to the current job market. I doubt
>anything FCC could have done in the 60's could have changed
>that.

Agreed. The causes were many and varied. I have written about some of them in other posts.

> Looking at it from a late 1950's perspective, when FCC began
>thinking about making changes in ham radio licensing with a view

>toward upgrading hams' technical abilities, it undoubtedly

>hams off their duffs and into a learning mode, and how to craft
>the changes given the constraints present. FCC initially wanted
>to do considerably more than they finally did toward moving hams
>toward increased technical skill. It was as though it was
>expected that hams would learn as payment for their use of the
>airwaves.

'zactly. But there's more to it:

- FCC was rethinking the 11th hour giveaway of December 1952
- FCC wanted hams to use more spectrum-efficient modes like CW, RTTY and SSB in preference to AM voice, and to use the VHF/UHF bands more, to take the pressure off HF.

>All that has since been turned into something of a
>personal rights bazaar.

>those who had no interest in CW and therefore believe it should
>not have been a requirement feel otherwise. But it seems to me
>a bit of a stretch to pronounce incentive licensing a failure
>merely because of the Morse code requirement.

Agreed. The real problem with IL was that many General and Conditional class hams thought of their operating privileges as inalienable rights that should never change. They did NOT like the idea that they were being declared unqualified to do what they had been doing for years, and required to take more tests to regain the same privileges.

Perhaps what could have been done back in those days would be to have offered a different incentive. For example, higher power (the legal limit was effectively doubled back in the early 1980s without anybody taking a test). Or the 'phone bands could have been widened, but only for those who had higher class licenses.
>
> In retrospect it probably was not a good thing to require full
>code qualification for all hams, but it seems there was no easy
>way to drop it, though a "twin tier" licensing system was
>seriously considered at one time, one tier with code and one
>with none.

Trouble with that scheme is that the treaty made it HF-or-no-HF, too.

I take a different view. I think it was a mistake to (re)create licenses with 5 wpm code tests, way back in 1951. 5 wpm testing was based on a number of mistaken ideas about how code skills are learned, and caused many to pick up bad habits that had to be unlearned. You don't teach a child language by speaking to the child verrrrry slowwwwwly.

Here's another idea for the mix:

Except for a few who learned the code outside of ham radio, most new hams for the past several decades have learned the code to get the ham licenses requiring it. In other words, the code test has acted as a Great Equalizer for the vast majority of HF-licensed hams. Unlike the written, it cannot be learned from a book, or from most people's work or education. Instead, it is specific to ham radio. Some people just don't like that concept. They don't want to be put on the same level as other hams.

> An all-or-nothing sort of test situation wasn't seen
>as workable, and the movement still presently underway, dropping
>it in increments, is much more acceptable to most hams, given
>that CW has always been at the core of amateur radio. And still
>is, for an awful lot of hams.

And if I have anything to do about it, will still be there, long after the test is gone.

I know it's like comparing apples to oranges, but I have a Vibroplex straight key. I do like their quality. I really want that LI Mercury from KG2ED. I sent him an inquiry via "snail-mail" as I could not locate a working e-mail addy. I'm keeping my fingers crossed.

> When you get an iambic paddle that you can use well, easy sending
> of good CW with it is a effortless.

That's what I'm aiming for. I eventually want the paddle/keyer to "beg for mercy" whem I'm "in the zone." ;-)

> That is, until arthiritis starts
> messing with the fingers.That can clabber things up a bit.

Here's a funny...kinda. I took a mis-step a few weeks ago while playing volley ball and kinda bruised my instep. Not bad, mind you...but enough to feel it. This is the type of injury that I'd have bounced back from in a matter of minutes. So I took it easy the rest of the day. WELL! At around 3 a.m., (About an hour befor I usually wake up to go to work.) my arch/instep actually woke me up and I could hardly walk from the bedroom to the bathroom...needless to say, I took a sickday. When I called my father up and he was sure that I was merely "bruised, but not broken," he quipped..."Don't

bounce back like you used to, eh hump?" Then I remembered all the times that I made him ride through Prospect Park with me...a day after he had to run down a purse snatcher. Or made him play football (soccer) with me when I knew he was tired. The punisher was now the punished...because on that "sick day," my 18-mo. old lad had me playing with him too. I then realized that I'd never really "made" dad do anything...no more than my boy had "made" me do anything. But that foot sure did hurt like a son of a bitch! (& dad snickered.)

Is that what I said? I'm waiting to hear the "POP!!!" when you pull your
head out.

> There's more and more vacant real estate showing up between your ears.

And mortgage rates are low.

Yes, it does. Makes your claim that they were rejected sound like just so
much speculation.

Was it just speculation?

Lt. Calley sped and shoplifted? Or was it Bob Kerry?

Anyway, what does that have to do with tacit approval from the FCC?

My previous posts never said that.

My previous posts indicate that if I knew that an opeator calling be was
outside his authorization, I wouldn't make the contact.

Its called Good Amateur Practice.

Dave will duck out of here at any moment. 30M was just opened up to DXCC.
There goes the neighborhood.

Dick, why is it when I said that I was a liar, but when you say it, it is the truth?

Of course many of the early hams learned and got paid to use CW (the definition of a commercial radiotelegraph op). Then demanded that everyone else learn it for free so they would have someone to QSO with in their spare time and their retirement years.

Brian

I'm actually suprised to hear Dick make the "In retrospect..." comments.

He has some grasp of the situation, at least.

Dick, K7JEB said he learned the code and rejected it.

Would you also have Len learn the code and reject it?

Brian

> BFD. Putzie thinks he was the only army type who ever babysat an AN-GR26
bank.
>Ballz.

I've never operated an AN/GRC-26. Never claimed that. The 8235th AU
had about a dozen for several purposes but they were not used in ADA
station communications.

The "angry-twentysix" was never referred to as a "bank." Sometimes as a
"26 hut" because of the enclosure that mounted on the flat bed of a
standard 2 1/2 ton truck.

>Thousands of 'em were in service through Vietnam, at least.

Doubtful. A few hundred, perhaps.

The AN/GRC-26 was almost always operated by those with field radio
MOSs. That MOS required passing morse code proficiency. Field use
of the '26 in Korea, '53 to '55, used the teleprinter for written messaging,
not morse code OOK CW.

>Most of the
>people who handled were not hams, though plenty were, Unlike Putzie, none of
>them are trying their damnedst to harrass hams on RRAP.

Information communication is not "harrassment" unless readers refuse
to accept new information.

>My brother spent 6
>years in Devens teaching Putzie-types HOW to babysit them.

AN/GRC-26 operation was taught at Camp Gordon, GA, later
renamed Fort Gordon.

Fort Devens had an ASA school. ASA, or Army Security Agency, did a
lot of monitoring during the cold war. They used a variety of radios,
principally receivers. ASA duties were ELINT. Up to sometime during
the 1970s, most ASA MOSs required morse code listening proficiency
to 15 groups per minute. The Fort Devens code school was 13 weeks,
6 hours a day in duration.

ASA was dissolved after the Vietnam conflict, merged into the larger
infrastructure of Military Intelligence. The principal M.I. school for the
US military now is at Fort Huachuca with branches at various other
military posts.

No manned ELINT station in the US military or NSA is "babysat."
While they have recorders, operators continually scan for signals,
manually separating known emitters from unknowns. NSA has some
installations where automatic separation and recording of signals is
done.

You said: "Dave, I've neve submitted any cards to DXCC, not even yours".

Seems to believe that you need to submit your cards to DXCC to prove your
operation was real. That's the drift of your statement, why else would YOU need
to submit any cards on YOUR operation to DXCC?

DO you have any idea what DXCC is all about? If so you're sure doing a good
job of hiding the fact.

> much speculation.

Really? How many QSL cards did you actually send out? How many contacts did you make? Did you actually work anyone from Somalia or did you just get "permission" to listen? You've already said you had no ham radio gear. Maybe your commander didn't want you hamming with company radios.
I guess it's too much to expect you to know that when you send QSL cards to stations who do actually have an interest in achieving DXCC they almost always use cards from the rare ones to that end. The DX community shares information very widely, and information regarding a rare station is always disseminated, even via ARRL venues. If you had sent out cards, and no one can find any DXer who received one so far, someone would have used it toward DXCC. Or tried. If you hadn't received official permission to operate in the form of documentation, it is most unlikely that DXCC desk at HQ would have sanctioned your operation - unless they were unaware that it was not legal. In that case, any DXCC credit that was awarded to other hams on the basis of working your T5 operation would almost certainly be subject to review, and almost as certainly to revocation, now that you've been "outed", Slim.
Not a good situation. You may wind up about as popular as the late lamented W9WNV.

Not that its an inalienable right, but EXACTLY that they were being declared
unqualified. Ditto the inconsistancy of saying that 5WPM Morse knowledge
will get you on this piece of HF, but its insufficient for that piece of HF.
Either it met the requirement or it didn't meet the requirement.

We're not stupid. We're rational, thinking people. Incentive licensing is
insulting.

> Perhaps what could have been done back in those days would be to have
offered a

Don't insult my intelligence. Operating higher power requires different knowledge than operating low power. But phone is phone. How is phone at 28.499 MHz different than phone at 28.500 MHz?

> > In retrospect it probably was not a good thing to require full

> Trouble with that scheme is that the treaty made it HF-or-no-HF, too.

How? Don't insult my intelligence. The treaty is intact, and the "full code" qualification is now 5WPM.

> I take a different view. I think it was a mistake to (re)create licenses
with 5

Do you advocate teaching children code before age 5?

That's when children learn most of their communicative skills.

> Here's another idea for the mix:

Agree.

> In other words, the code test has acted as a Great Equalizer for
> the vast majority of HF-licensed hams.

Huh? What does it equalize?

And I'm so sick of hearing the stories of the former military CW op who goes from zero to Extra/20WPM in 6 seconds.

> Unlike the written, it cannot be learned
> from a book, or from most people's work or education.

Learning from a book is wrong? illegitimate? unholy?

Burn down the libraries?

> Instead, it is specific
> to ham radio. Some people just don't like that concept. They don't want to
be

Make it "specific" to all the radio services as well. Put CW requirements
back in all the other sercvices.

> >An all-or-nothing sort of test situation wasn't seen

Knock yourself out. But don't whine if I don't come around in 2027.

73, Brian

Welp, if there was any remaining doubt, it just vanished. He really IS that dumb.

Well, we sure didn't have to wait long for you to confirm it, either.

Unless Cecil was right about people being "forced" to take code exams, no
one "had" to upgrade. It was merely an incentive, not a mandate, right?

> Once in awhile I still copy w1aw to beat myself up in the
> high-speed runs. Not that you would relate to a bit of it.
>

To bad you don't. There are a few around like Jim who would be an asset to ham radio under any circumstances. Don't make the mistake of assuming you're one of them.

W1AW robot sending CW is an "actual radio station on-the-air?"

Yup, whatta concept.

Why didn't you want ot copy Dick's coconut boat swing for some good practice?

Slim, you have truly displayed the depths of your cluelessness here in the past few days on rrap. Good luck. As long as you've been around and as little as you've learned from your pitiful efforts, you surely will need it. Forever.

Ditto 1998. The Extra exam was mostly about VEC information. The Advanced
exam had all the meat.

> The 20 wpm code test, it was thought
> (and still is thought) was what separated the truly committed

Whoo-hooo! A decade after the international geophysical year, we get a
bunch of CW operators, meanwhile the M28 need a squirt of oil.

Or some, neither in the industry as an engineer nor a commercial cw op had
to learn both.

Sounds like reductionist theory. Like, "only examine what's required,
everything else is superflous."

Not everyone submits their cards, you nitwit.

> *DO* you have any idea what DXCC is all about? If so you're sure doing a
good
> job of hiding the fact.

It would appear to be a way for the ARRL to control every aspect of the
hobby.

> > I'm waiting to hear the "POP!!!" when you pull your
> > head out.

>
> When you hear the pop it'll be very loud, and it won't be my head.

It will be your buttocks making that noise, Dick. Not your head. But you
must remove your head for that noise to be made.

> > > There's more and more vacant real estate showing up between your ears.

>
> You sure don't need any more, you're already saturated.

Refinancing or a second mortgage allows me to purchase more real estate.
Soon I'll own the whole world!

(Maniacal laughing)

I'll never demand that someone else use up all of their free time to learn
something for my entertainment, except your use of the computer on rrap.
And I don't even have to petition my government to do that since you can't
stop yourself.

>I ended up going with a Bencher. I agree its sucks for a real CW operator.

Dan:

I like to consider myself a "real" CW operator, and I've used Bencher
paddles exclusively for 20-plus years. This is in spite of the fact that I
own a perfectly good (and new in the box) Vibroplex Iambic paddles
that are also now over 20 years old (and doubled in value!). A friend
of mine, who has more money than I do, bought a set of Kent Paddles
a while back, and I must admit that I was not impressed with them,
considering that they cost 4X as much as my standard black-crinkle
finish base Bencher BY-1 paddle. Plus, my Bencher's got dropped
on a concrete hangar floor at the airport in Nuremburg, Germany in
1985. After an hour with a set of pliers and a screwdriver, I got them
straightened out and re-assembled back in working order, and have
used them successfully (a lot) ever since. The same kind of abuse
may have rendered those fancy Kent paddles QRT.

Now, if we're talking about a set of Mercury paddles, that's another
story altogether! Those things are absolutely amazing! I understand
that they are back in manufacture (albeit in limited quantities) since
the designer, N2DAN, went SK a few years ago. If I ever win the
lotto or get a big inheritance, I may indulge in a set.

Bert:

My keyer is a bottom-of-the-pile MFJ Econo Keyer II, model MFJ-401C.
No memories, but provides both Iambic and "bug" (semi-auto) operation.
Only downside is it is a battery-sucker, but I run it off a tiny (50 ma.)
12-volt "wall wart." There are a lot of options out there as far as keyers
are concerned, but the Accu-Keyer is probably the best, though pricey
(around a C-note).

Brian:

I have the MFJ Econo Keyer II (model MFJ-401c) and if we're talking about the same machine, your "forever" is one heck of a lot shorter than mine! I find the thing to be a veritable battery hog; it even makes the Energizer Bunny stop beating his drum! It works just fine on a 12 V. 50 ma. power supply that used to charge the Ni-Cad battery pack from my old Icom IC-02AT handheld, so that's how I use it, unless I'm operating portable (Field Day, mainly). However, I have a "portable" battery cable for it that plugs into a 2.3 amp 12 V. gel cell! That'll run it for a good long time. This thing is obviously not CMOS. I've been thinking of getting an Accu-Keyer, but this one works well, in spite of the power problems, so I've had no need to replace it.

>73 de Bert
>WA2SI

Bert:

Dual lever paddles permit Iambic operation -- meaning that it is possible
to send certain characters by squeezing the paddles together, thus
causing both contacts to be closed at the same moment. In this way, a
character element (dit or dah) can be inserted into the "frame" of the letter
once the initial element has already been started. Letters like C, F, K, L,
Q, R, and Y lend themselves to being sent "iambically." It is a time saver
when done correctly by a practiced operator. Iambic operation is not
possible with a single-lever paddle, and all letters must be completed by
making the complete series of "strokes" on either side of the paddle.
I use dual-lever paddles exclusively; specifically the Bencher BY-1.

That isn't necessary. What about the "permission" you supposedly
obtained from the U.S. military. You don't have that in writing either.

Dick, can you can come up with some receipts where Phil is under contract with Warlord Aideed to produce the Somali equivalent of Part 97? Or maybe that khat chewing, AK carrying Technical at the K-4 traffic circle is now in power.

I didn't "just ignore" Phil. I suggested that he correct the ARRL's information about operation in Somalia.

Does that sound like I ignored him?

I guess they sat out Nam.
Putzie doesn't know that the very first US casualty in Vietnam was an ASA soldier
named Davis. One of my brother's students.
Where DOES he get all that stale, incomplete information? Must have found an
"Our History, but Incomplete" Cd by the DOD. Or maybe that's what they're releasing
on their website for GOOGLE searchers.

>
> ASA was dissolved after the Vietnam conflict, merged into the larger
> infrastructure of Military Intelligence.

WOW! he did get that one right.

>
> No manned ELINT station in the US military or NSA is "babysat."

Didn't say it was. Said Putz babysat a transmitter site in the outback of JA land.

Gotta have a full complement of flunkies to read meters and reset tripped circuit
breakers, ya know.

> While they have recorders, operators continually scan for signals,
> manually separating known emitters from unknowns. NSA has some
> installations where automatic separation and recording of signals is
> done.

That's OLD information, not even close to current.

Back into the poop filter goes the Putz. Cub, too. Boring.

I don't need a pass, Brian. I hold written documentation for each and every one of my operations from foreign soil. There's not a single case of "that guy told me it was okay". Do you realize how sad it has become when Len Anderson, a non-ham grumpy geezer is your sole supporter in any of this?

You tried this before and it doesn't wash. I operated where I was
permitted. I have documentation that I was permitted to operate from
Tanzania and that I was permitted to be on the portion of six meters
```

which I used. You, on the other hand, have no documentation permitting
you to operate from Somalia at all.

A French ham of conscience wouldn't call someone out of band.

> > > Then again, you

>
> Its called Good Amateur Practice.

Naw, your previous posts indicated that you'd ask a station to confirm
that he was operating within his allocated band segment (followed by
"QSL?"). You need all the amateur practice you can get.

You certainly didn't have any written permission to be on the ham bands.

No, that's just a standard. One could assume that at least one of the
stations contacted by you from Somalia would need the country as a new
one or as a band-country toward his DXCC. That no one submitted any of
your Somali cards is quite peculiar.

> > > > I was never out of band.

Even YOU don't know if he had the authority to make the alleged statement. You certainly have nothing to back up your claim of permission.

That's an easy one, Brian. I'm only interested in my DXCC status from
the U.S. but NOT ONE of those you worked has ever submitted one of your
Somali cards for DXCC. There are, of course, multiple scenarios to
cover such a situation.
A few of them are: You never worked anyone. You never QSL'd anyone.
You worked only people operating out of their native land who choose not

to chase a DXCC from the country where they were then active. Which one of these sounds likely to you?

> information about operation in Somalia.

>
> Does that sound like I ignored him?

No, you just continued to ignore good sense and shoved your obviously serious level of ignorance even further toward the Titanic's resting place. Phil tried to 'splain to you that even tho a country has no government you can't just go in and set up a ham radio station without following international rules - a fact which is covered in US rules, and which you, as a US licensee, are supposed to be familiar with, at least to the point of getting it straight. And for which you are responsible, again as a US licensee, for abiding by and/or adhering to.
.
Permission is not "Yeah, go ahead". It's a document setting forth authorization and the conditions, limits and parameters thereof. You had nothing but vapor. Once those words -"Yeah, go ahead"- were finished compressing the airwaves, what did you have remaining to show it ever happened? Your word? Do you really not know any better than that??? You keep insisting that you do not. Slim, we all believe you.

Now, can I go back to 'Ignore You' mode? You better betcher bippy I can. I've skipped over literally hundreds of your inane posts in the past - they must have been inane, that's all you ever generate. I guarantee I can and will do so in the future, right along with those of your Elmer, The Putz. I only stayed this long to see just how far you could go toward forcing yourself to continue this farce, and turns out you're a natural for it. Hey with you at the helm it could stagger along for months. Why might I ever have thought otherwise? But couldn't you have come up with *something* better than The Putz for an Elmer??

As for your obsession with the Actuarial Tables, finally it has become clear why you're so fixated on them. After all, as long as you have spent attempting to become a qualified ham and as little as you have progressed toward that noble goal, you're sure to be on the far side of Geezerdom yourself before you even learn enough to stay out of the soup - should you somehow happen to accidently last that long..

If ignorance is bliss you're serenity personified.

Chow!

JA to W6 with a rhombic and kilowatts is "long distance" hero radio??
W1/W2/W3 to VK with 5-10 watts and a wire dangling from a tree is an
SOP ho-hum.
>
>
Rhombics were the wrong type of antenna to use for JA/KA/HL to W6.
Phased wire arrays would have been deployed faster, would have had
higher gains and occupied far less real estate and would have been

much easier to secure than rhombics are. Especially, per previous,
when subject to enemy light machine gun fire. But then there wasn't a
whole lotta light machine gun fire in the joints in Tokyo or up the
road where Our Hero The Putz babysat the repeater.

>Now...since you ONLYstate the truth, NO fabrications, we will wait and see
>how long it takes you to produce your verifiable truths of League dishonesty.

It's been 2 1/2 days since I put this up, and His Putziness has made
almost a dozen other posts since then.

So far, no repsonse. Not that I figure there ever will be, since we know
the Putzy One can not supply same without proving that his "verifiable truths,
no fabrications" assertion is false.

This is just a milestone that we can measure Lennie's credibility by.

So far, Lennie hasn't made it to Mile 1.......

Still waiting right here, Lennie....

Amen. It works and does everything ya actually need. Bert is pulling
together a pack 'n go portable station for use in South America and I
expect that you'll agree that he can't go wrong with an Econo-Keyer
for the job. But it looks like he'd better not count on powering it
with an internal battery. He'll have an Astron switcher to power the
radio so he'll be able to tap that to power the keyer.

Steve,

Quit mucking up the newsgroup with your asinine trolling. If it weren't
for your juvenile prodding and poking, Anderson wouldn't have anyone to talk
to and he'd go away, and maybe vice versa.

There is no voodoo or magic associated with RF
propagation. There are several perfectly sound
technical reasons why it is beneficial to occasionally
sacrifice a goat in your antenna field.

You can't be "forced" to do something you WANT to do.

(Now...WHERE'S Cecil...???

Thank-you for exercising your Constitutionally guaranteed free speech,
Hans.

If this were a video forum you could see me exercising mine.

Have a Smurfy Day.

This newsgroup had muck knee deep before I arrived...it will have muck
until the Second Coming.

BTW, Hans...It isn't trolling if it's true. His Putziness has made
allegations of dishonesty per the ARRL, yet insists he "does not fabricate" his
posts. That being the case, where's his "evidence"..?

Unless YOU can provide some evidence that he's right..?!?!?

Dave, more group think? Are you really comfortable being in a consensus
with Dick, Steve, Kelly, and Ed?

I was there.

You weren't.

I know what happened.

You don't.

You merely speculate and defame.

Steve/KF2TI showed up here with correspondence from another, later, Somali
Vet who said he obtained permission from his Naval Commander and it was
accepted for DXCC credit.

The ARRL web site gave the particulars of obtaining permission from one's
commander.

What do you know that they don't know?

> You certainly have nothing to back up your claim of permission.
>
> Dave K8MN

Who's asking?

Where is Cecil? I wonder if he's OK.

Anyway, if the incentive has "TEETH," as Kelly says it did, I would imagine
that it can force you do do something against your will.

>Dave, more group think? Are you really comfortable being in a consensus
>with Dick, Steve, Kelly, and Ed?

>I was there.

Copy of your orders, please?

>You weren't.

He doesn't need to be for the purposes of this discussion. His facts are accurate.

(1) To operate from a foreign post not under the jurisdiction of a legitimate local government, you must have UN approval, or where other written regulations are provided for, WRITTEN approval from a military commander AUTHORIZED to issue such authorization. You had neither.

(2) Lacking same, your operation was illegal. We can "accept" that you THOUGHT you were legal, but in the end, you weren't. Just accept it and move on. You keep digging yourself in deeper.

(3) In any case, for ARRL DXCC purposes, you were a Slim. Sorry about that.

>I know what happened.

You know what you THOUGHT happened...You THOUGHT your T5 operation was "legal". It wasn't.

>You don't.

He does. He's gotten it right so far. And I'd trust the "opinions" of an experienced foreign service operator before I would those of an over-anxious, inexperienced, wannabe DXer.

>You merely speculate and defame.

Speculate? Perhaps. Defame? Naaaw...that was YOUR doing when you insisted on running headlong into a brick wall of facts that didn't support YOUR assertions, Brian.

You got to operate from an exotic location. You had the chance of a lifetime and I am sure you had a ball. Bully for you.I would have taken the initiative to get on the air with "tacit" approval from my officers, too, and

worried about the paperwork later.

Again, I can accept that you THOUGHT you were "legal'. The facts are you WEREN'T. Just bite the bullet and hope you get a second chance to operate from some exotic QTH again one day, but next time, get the paperwork to back it up.

>>Do you realize how sad it has become

> don't give up anything, anytime, for any reason".

FEMA has allocations at 5.2XXX, 10.4XX, 14.XXX. In getting traffic across
the country, HF
is still vital in the event of the destruction of communications
infrastructure. The military still, in
spite of beliefs otherwise, uses HF phone extensively. I listened to
USAF/Andrews AFB exten-
sively after 9/11/01 on 11 Megs.

There is no voodoo or magic associated with RF
propagation. There are several perfectly sound
technical reasons why it is beneficial to occasionally
sacrifice a goat in your antenna field.

654. Re: NTIA tries to kill 5.2 MHz band

Newsgroup: rec.radio.amateur.policy
Date: 2002-09-07 18:08:53 UTC
From: n2ey@aol.com
Message-ID: <20020907140853.05850.00000346@mb-mr.aol.com>
Source record: 52422

Besides the NTIA stuff, there's another source of opposition to the 60 meter allocation.

At least one manufacturer of Part 15 devices opposes the allocation because hams may interfere with those devices!

Part 15 specifically states that Part 15 devices must not interfere with licensed services, and are afforded no protection from interference received from licensed services. But the manufacturer turns this on its head and wants to be protected from interference.

Full details at

http://www.arrl.org

Ryan, KC8PMX, asks what benefits ARRL membership gives beyond the magazine. Countering intrusions from Part 15 devices is one example. Here's another example of Part 15 intrusion:

Several years ago, a manufacturer of Part 15 devices produced devices which used frequencies at the low end of the 80 meter band. Some hams experienced interference from these devices, and vice-versa. ARRL went to bat for the hams in the form of our own W1RFI and staff. They conducted tests which showed that harmful interference did indeed result from the Part 15 devices.

The manufacturer changed the design of the devices so that hamband frequencies were not used. Existing devices were replaced on an exchange basis if a customer or ham experienced interference.

Crucial to this whole effort was the testing of the devices and the gathering of sound engineering data that supported the Amateur Radio position against the manufacturer. Could most amateurs do that sort of testing and data gathering on their own time and out of their own pocket? Plus all the follow up and other work? I don't think so.

Now some might say "I don't use the low end of 80, so that incident is of no interest to me". That's shortsighted, because it could just as easily have been 10 meters, 2 meters or 440. And if such incursions are not opposed wherever they occur, a precedent is set that hams won't fight back.

Is there any organization other than ARRL that will go to bat for hams in a situation like that? I don't know of any.

Yes, Jerry, there are lots of HF allocations still out there, mostly as backup to satellites. Also there are many which are still allocated which back up nothing. Most of the commercial CW allocations stand empty, along with much of the digital. In proper circumstances, some would indeed come to life once again. But never to the extent that ham radio can't be allocated .15 mhz from all that empty spectrum for the express purpose of adding to the nation's emergency communications capabilities. To oppose that is asinine, and everyone involved should know it.

> sively after 9/11/01 on 11 Megs.

If you listened in that region during Desert Storm 10 years ago you really heard some interesting if mostly unintelligible stuff.

No one is suggesting they turn HF over to the hams, just give us a sliver to use constructively, to add to the capability, instead of stonewalling.

Hi Brian,

Actually, I'm set for my portable station. I chose the Palm Mini Paddle coupled with a their Code Cube. It was really a no-brainer, it was pretty much what I'd envisioned and has received nothing but sparkling revirews on eHam. Here's the link.

http://www.palm-radio.de/english/english.html

I chose the M-P 817, which is painted black to match the FT-817. It normally comes in grey to match the Elecraft K2. Black matched the rig I chose perfectly, the Patcomm PC-500 Dual Bander, shown below.

http://www.patcommradio.com/webdoc8.htm

You're right about the Astron SS-10 though. The whole shebang should make for a nice light package. What I'm looking for now is a nice paddle/keyer for the shack, something "heavier." Like I said, the LI Mercury sure caught my eye AND, like the Patcomm, it too is made right here in LI, NY. It's got a hefty price tag, but I've got a nice expense check due that should actually make it painless to the household budget. I dunno, I'm looking hard at the Kent too.

I'm getting ready to "throw" together a Wilderness SST for 30-meters. It'll help me get back into the groove with mu soldering skills and prepare for a possible K2. I'll use the Palm with this 2 watt rig out on the beach or in the park. (XYL will love this while she keeps the harmonics "corralled.") Since 30-meters is a digital-only band with a power limit of 200 watts, I figure a 2 watt signal will have a shot at a solid contact. Thanks you both

(all) for the valuable info. :-)

It seems to be some kind of endurance contest in messaging.

Judge Heil issues decisions of his private court and expects
all to obey his court's rulings. He is very upset when told his
judicial robes are transparent...or has no authority.

He wants order in his court. The constant banging of his gavel
has a sharp sound when it hits his head instead of the bench.

He must rule. Quod Erat Demonstrandum. QED, one of the
unwritten Q-codes. :-)

It's an east coast thing. Signals make it to the midwest only if
HF propagation is favorable.

W1AW should improve after Judge Heil sends his spare radio to
them. ARRL will no doubt have a special news feature on that
when it arrives. :-)

Ultralight is familiar with all military surplus radios, even used a
28 VDC supply old military aircraft radio in a 6 VDC WW2 jeep.
Some are just genius level grizzled old war vets. I salute them.

Ultralight ought to write up a technical dissertation and send it to
the Joint Chiefs of Staff of the US military to convince the respective
signal officers that "[east coast] to anywhere on 5 to 10 W from a
wire in a tree" is good for any circuit operating 24 hours a day,
7 days a week, carrying at least four sub-circuits within it.

The method would be revolutionary. The militaries of the world
haven't been able to do it, ITT hasn't done it, AT&T hasn't done
it, Press Wireless hasn't done it, RCA Globecom hasn't done it,
none have done it for 24/7 operation.

>After stating that you were never a member of the Armed Services, you even
>try to comment on DOD radio operations? Isn't that like stepping out of
>what you know into the arena of what you don't know?

He KNOWS. He once read a whole Fair Radio Sales catalog.
Cover to cover.

Military radio operations of the 1950s on HF resembled US amateur
radio operations of the 1990s. Boat-anchor devotees in HF ham
radio were still "dipping the plate, peaking the grid" on glowing finals.

Hams were discovering automatic antenna tuners in 1995 that were
first introduced on US military vehicular radios in 1955 (featuring the
"Bruene detector" as sensing element).

Hams did have rock-solid VFO equivalents on HF rigs in the 1970s,
courtesy of off-shore designed ready-built transceivers using PLLs
and embedded microprocessor control and display. Earlier
"Collins PTO" enabled rigs did the same but without electronic
frequency read-out; the "PTO" was developed first for the US
military.

Ultralight got hit by overpressure. I was never at Fort Devens; have been to Boston only once, on business and that in 1982 for Rocketdyne. :-)

Ultralight's NOTAMs on DoD communications seem confined to ARRL mentions of WW2. By the time of the military satellites emplacement, multi-channel troposcatter radios for beyond-horizon communications were in US land forces inventory and field use. Several types of multi-channel, multi-circuit microwave links to satellites are now used regularly in all US military branches for international communications, complete with on-line encryption for communications security. Man-pack and light vehicular HF radio is also available with a variety of antennas and communications security encryption.

Small-unit land force radios coming up on their 14th year in operation have FHSS or in-clear digital voice or data with auto-netting capability of several users, wide environment capability with 0.5 PPM frequency and time stability. Those operate in the 30-88 and 225-400 MHz bands. Military air communications have greatly-expanded modes on 225-400 MHz, able to link with and forward land force communications to/from command areas. Land force field communications centers at regiment and higher level resemble the old pre-WW2 message centers in that concentration and message quantity necessitates more message operators than radio operators. State of the art increases begun in the 1960s allows military radio equipment to run unattended 24/7 for long times with good reliability.

The cinema-induced romantic concept of valiant behind-the-enemy-lines heroically tapping out morse for vital information back to London wasn't applicable by 1980. The "tapping out" was replaced by key-boards and solid-state memories able to send data at 1200 BPS to military satellites or orbiting communications aircraft. An old example is the AN/PSC-2 (phased out by now) leading up to the newer trial, AN/PSC-5 (under evaluation). At least two different antennas with each, working at the military UHF band, linking with a tight antenna pattern instead of omnidirectional squirting of HF signals. Encryption was built-in thanks to embedded microprocessors and digital technology. Data rate is higher than the older 1200 BPS PSC-2 rate.

USN shipboard communications phased out morse code use in the 1960s in favor of teleprinter and data modes. USN already had RTTY prior to WW2 on cruisers and heavier classes, primarily

for on-line encryption capability. Encrypted VLF is used for alerts
of boomers under water. USN submarines have had satellite and
airborne comm capability at VHF and higher since before the
1980s, none of it requiring morse code capability.

The problem in description is one of sheer size of the developments
that have happened in the past half century. A secondary problem
is ascertaining whether or not the information is public or not...that
solved mostly by industry electronic trade publications such as
Defense Electronics, EE Times, Microwaves & RF, RF Design,
EDN, and Electronic Design...and the information in public-access
websites of General Dynamics, Harris, and Nova Engineering (to
name just three). The US military has made extensive use of the
Internet for a great deal more information, including free public
access to many Field Manuals (FM 24-24 is a catalog of all signal
equipment in inventory as of 1994). Military branches have had
their own monthly publications for years such as "Signal" of the
US Army Signal Corps. Personal experience description in
certain military radio areas in regards to technology must be
equated to public releases of both government and corporate
information...to avoid conflict with 18 USC and proprietary trade
secrets. The amount of public-access information is enormous.

>> The WX is tanking and I have antennas to put up so that I can OPERATE
>> my own FCC LICENSED RADIO STATION in the coming months so I'm outta
>> here. Kindly pass my fondest to The Putz Dick.
>
>Kelly, when did you start calling him "The Putz Dick?"

That's an oxymoron. The word "putz" has several meanings. In many
germanic-based European languages the word is colloquial for polish
or to polish (as with a wax). In Yiddish it is a colloquial pejorative
equivalent to "dickhead" (equating a person to a penis). Ultralight's
description could be construed as either "polished penis" or as
"penis-person penis." Either one is rather ridiculous. Ultralight
should get out among certain Philadelphia neighborhoods to learn
correct pejorative phrases. :-)

Unless there has been some recent modification of Part 97, Title
47 CFR, the FCC does not license amateur radio stations directly.
The FCC grants a license to radio amateurs as an operator and
those may use any sort of transmitter that meets the technical
requirements of Part 97. [no doubt that will cause great rage and
primitive debate in re "station." :-)]

All of that seems to be "good amateur practice" among PCTAs.

>he spent those 6 years teaching it. At Fort Devens.

At what period in time, senior?

Was the BC-610 and O-5FR removed from the hut for ASA use?

How did a 26 hut having an HF transmitter fit in with monitoring of
HF radio signals from a distance?

Did "bro" ever camp out with an MLQ-24? Diddle an AN/PRD-1?

>> Fort Devens had an ASA school. ASA, or Army Security Agency, did a

? What does that sentence mean or imply?

>Putzie doesn't know that the very first US casualty in Vietnam was an ASA
>soldier named Davis. One of my brother's students.

There were about 54,000 killed in the decade-long Vietnam war.
Is it now a requirement to KNOW each and every one of them?

What is the first name of this "very first US casualty?" Did he get
a posthumous Intelligence Star?

> Where DOES he get all that stale, incomplete information? Must have found
an
>"Our History, but Incomplete" Cd by the DOD. Or maybe that's what they're
releasing
>on their website for GOOGLE searchers.

There is no such CD called "Our History, but Incomplete" by anyone.

The Department of Defense has hundreds of websites, all kept as
current as their webmasters can manage. You can access websites
for CIA, NSA, and DIA. One can order from dozens of military
history documents available from the US Government Printing Office,
ordering through the Internet or at one of their many branch sales
stores. Mail-order shipping is free if USPS delivery.

There are thousands of ex-ASA soldiers among our population. They
fulfilled a vital role in the nation's survival during the Cold War. There
are also thousands of former NSA ELINT operators and some of their
experiences have been documented in James Bamford's "Body of
Secrets," copyright 2001 and published by Doubleday, a division of
Random House, Inc. (may be ordered through amazon.com, shipping
charges fee if total order above $25).

Contract information for nearly all ASA and NSA radio equipment has
been published in US electronics trade publications since before the
capture of the USS Pueblo. Those publications, along with industry
associations' newsletters are not classified, only harder to obtain by
non-industry people; most have no subscription charges at all.
Another source of many different texts on government subjects is the
NTIS, National Technical Information Service. A search engine is
available on the Internet. NTIS can, for a slight extra charge, supply
out-of-print documents.

>> No manned ELINT station in the US military or NSA is "babysat."
>
> Didn't say it was. Said Putz babysat a transmitter site in the outback of JA
>land.

"Outback?!?" The ADA transmitter site was on a man-made island in
Tokyo Bay, about a square mile in area also containing the USAF 16th
Communications Squadron...it was as "outback" from the city of Tokyo
as crossing a single bridge. :-)

>Gotta have a full complement of flunkies to read meters and reset tripped
>circuit breakers, ya know.

Out of curiosity, where and what "meters were read?" Did we record
meter readings on something? Are you thinking of the FCC broadcast
requirements to regularly check tower currents on directional antennas?
The only "recorded meters" are in your imagination.

Where were the "circuit breakers" at that station? Describe them in
some detail and their location. Did a Press Wireless PW-15 have
little weenie push-button breakers? :-)

>> While they have recorders, operators continually scan for signals,
>> manually separating known emitters from unknowns. NSA has some
>> installations where automatic separation and recording of signals is
>> done.
>

> That's OLD information, not even close to current.

I already knew of some of it but James Bamford's 2001 book is my reference there, such as "Echelon" which has been documented on television. The sinking of the USS Liberty by the Israeli navy and air force was in all the papers a few years back.

Of course, we can all go back to that current and up-to-date book on radio amateur history, "200 Meters and Down," describing ham stuff of the 1920s. :-)

Or ham radio at the south pole also of the 1920s as given in opening chapters of ARRL Handbook. :-)

Have you heard that amateur radio has discovered the new world above 30 MHz? :-)

Beep, beep.

>He KNOWS. He once read a whole Fair Radio Sales catalog.
> Cover to cover.

Got taht one beat...I've BEEN to Fair Radio...(as a kid). Bunch of us loaded up in the old Ford station wagon of one of the KSU students and made a day trip to Lima...Man, the STUFF!

(Rumor has it that when they re-commissioned the U.S.S. Missouri, Fair Radio lost about 80% of it's floor stock to replace it's anchor...!)

>Military radio operations of the 1950s on HF resembled US amateur
> radio operations of the 1990s.

Hmmmmm.....DSP man-portable radios with synthisized frequency control, etc...??? Whew! GHow have they kept THAT off the surplus market THIS long...???

>Boat-anchor devotees in HF ham
> radio were still "dipping the plate, peaking the grid" on glowing finals.

Except for a handful of old-rig devotees and the guys running "old tymee AM), don't know of many of those anymore...Maybe a few old TS520's still roaming the airways.

>Hams were discovering automatic antenna tuners in 1995 that were
> first introduced on US military vehicular radios in 1955 (featuring the
> "Bruene detector" as sensing element).

Yeah...the size of SEVERAL toasters. And Amateur autotuners go back to MUCH earlier than "1995", Lennie. I see you're out of turn with Amateur Radio practice issues again.

>Unless there has been some recent modification of Part 97, Title
> 47 CFR, the FCC does not license amateur radio stations directly.

Oh? Get yours from Kellogg's for two box tops and fifty cents?

>The FCC grants a license to radio amateurs as an operator and
> those may use any sort of transmitter that meets the technical
> requirements of Part 97.

A specific licensee receives a station license concurrent with his/her operator license. I may, as an OPERATOR, go to the home of any other Amatuer

licensee and, with requisite permission, use his/her station without further adieu, regardless of THAT person's operator license.

> [no doubt that will cause great rage and
> primitive debate in re "station."]

No "rage"...just curious as to why you'd so carelessly misdirect on that one, Lennie. Poor show......

>That's an oxymoron. The word "putz" has several meanings.

Lennie's well versed in his geneaolgy, I see.

As long as the AC mains are on...have you made any alternative plans for that? I know that even the "latest" cells can rack up a considerable weight penalty if you put a pack together that gives you any decent amount of operating time/capacity.

>Since 30-meters is a digital-only band with a power limit of 200 watts, I

For the most part! I still like to have 50 or more watts if I need "consistent" or "sustained" communications capability.

Right, no problem with that. I think the main thrust here is that far less use is made of HF by anyone except hams nowdays. For NTIA to offer such a strong negative resoponse on the basis that such a small sliver of HF is vital to the interests of former routine users doesn't fly. If that particular slot is really important to keep allocated I'm sure there can be found one nearby that isn't. Their response smells. Like someone in industry has lobbied where lobbying is not proper, maybe even illegal.

Dick

I'm quite comfortable with it. You left out Phil Kane.

> I was there.
>
> You weren't.

Agreed.

> I know what happened.
>
> You don't.

I know that accredited operations from Somalia have written
documentation. I know the call of one such station and have read some
interesting e-mail on the matter. I also know that you don't have such
documentation. I know that no one has ever submitted a T5/N0IMD card
for DXCC credit. Finally, like most other DXers operating from foreign
soil I have documentation which proves my permission to operate. You
were saying?

> You merely speculate and defame.

The speculation is getting pretty good in light your lack of
documentation for alleged permission to operate and the corroboration
from others who confirm that written documentation was necessary. You
don't have any fame to "de".

We've also been down this road. I am not responsible for ensuring that
others operate where their governments permit them to operate. I'm only
responsible for operating where I am permitted to be. That isn't the
same as operating an amateur stations with no permit from foreign soil.
```

It isn't difficult. Perhaps we can have someone explain it slooooooowly
so you'll comprehend. I explained it again in different terms. Perhaps
I can use smaller words.

I was saying that you have no experience operating from a country with no government. You're only experience is in places where there is an office and a clerk. Next time don't be so timid. Go for something really rare. Of course, there might be an element of risk involved.

You're pulling your Hare out trying to figure out why there are no cards at the DXCC desk to write "VOID" across. Tsk tsk. You've enlisted the aid of the RRAP mafia and they've come up empty.

How much DXCC desk time have you wasted?

Now what?

Did you get your permission in writing from that Naval Commander? If not, all bets are off as far as your particular permission. You keep trying to equate the successful operation by others with your Somali operation.

> The ARRL web site gave the particulars of obtaining permission from one's
> commander.

No, it most certainly did not. It supplied a couple of vague sentences. Apparently you were the only individual who couldn't figure out that "permission" meant "in writing".

> What do you know that they don't know?

Better yet, what does the DXCC desk know and what do I know that YOU don't know.

> > You certainly have nothing to back up your claim of permission.

> Who's asking?

Nobody is asking. I didn't pose a question.

>The Putz is gonna find this thread eventually, he's been bleating for
>years abt the NTIA ruling the spectrum vs. the FCC.

Incorrect. About two years ago I questioned ARRL statements about experimental communications necessary to prove the band's capabilities by a selected group of radio amateurs. ARRL not NTIA.

That's still hilarious. In 1998 there must be "experimentation" on HF to prove "capability?!?!?" What do you think the HF communications industry has been doing there since the 1920s? Has no one measured signal strengths from either the old or new WWV transmitters on 5 MHz in a half century?

About the same time as the FCC posted 02-98, the NTIA made available an HF propagation analysis program originally developed for VOA service planning. Baseline for the analysis was all of the known HF characteristics up to that time...about 70 years worth of data. It was accurate. An improved-for-general user interface was made available in early 2002. It is still accurate today.

NTIA regulates all US federal government and military use of the EM spectrum...although not quite with the absolute authority that the FCC is chartered for on civil radio use. NTIA and FCC work together on future spectrum planning.

How can an unintelligible signal be "interesting?"

Do you listen to front-end noise for hours so that you can
hear the voices in there? :-)

We wouldn't even need SATCOM if it works that well.

I'm not much on germanic-based European languages, but maybe he meant "the wax polish penis?"

Lenny,

Why are involved in this? You aren't a ham and you aren't a DXer.
Brian himself fans the issue and is the message endurance king on this
topic.
His predicament is of his own making. Come to think of it, so is yours.

Dave K8MN

You have to own a receiver capable of tuning to one or more of the many
frequencies used and it needs to have some sort of antenna attached.
Said receiver should then be turned on and tuned to one of the practice
frequencies.
You should try it sometime. It is plainly and clearly audible in
northern Europe along with West, Southern and East Africa.

Write about what you know of amateur radio.

Dave K8MN

Ed disappears. Kelly gets secret newletters from KF2TI regarding a worldwide dx inquiry, then the attorney gets on here and completely contradicts the ARRL information and others who have successfully operated from there. The DXCC desk has to approve overtime hours that will certainly be kept from the minutes in QST, and Dave, Dick, Jim, and Steve form a concensus. The only ones missing are Bruce and Larry.

Hi!

I've been in places where there is risk and where I've had no weapon.
Are you supposed to be at the same time both brave and stupid? Everyone
but you seems to have figured out that "permission" means "in writing".

The information I stated above doesn't seem to corroborate your tale
that we've "come up empty". It would instead indicate that either
you've operated without proper permission or you've fed us a BS story
and never operated at all from Somalia. The DXCC desk does not write
"VOID" across QSL cards.

> How much DXCC desk time have you wasted?

None whatever.

> Now what?

Pretty much up to you. Are you up for another serving of crow?

> Hi!

Ed disappeared because he tired of your wierd posts. Kelly and numerous
others received material confirming the necessity of written permission
for operation from Somalia during the period in which you claimed you
operated. The ARRL information consists of a couple of sentences of
vague material and you act as if it constitutes a regulation of some
sort. Now you seem to have been caught in a snare which you built.

I don't believe that any of this can be construed as "freaking out". It
has taken little time or effort and I've found it most entertaining.

Dave K8MN

> communications industry has been doing there since the 1920s?
> Has no one measured signal strengths from either the old or
> new WWV transmitters on 5 MHz in a half century?

What's hillarious is your refusal to accept that the studies conducted
were not all about propagation.

NTIA can disagree, but the ARRL will be able to turn around, say
"Here...we did this study and didn't have one complaint during it". It will be
kinda hard for the NTIA to explain why it didn't complain then, and THEN didn't
file comments until after the closing date.

>About the same time as the FCC posted 02-98, the NTIA made
> available an HF propagation analysis program originally
> developed for VOA service planning.

You keep trying to make this strictly a "propagation" issue. It's not.

>NTIA regulates all US federal government and military use of the
> EM spectrum...although not quite with the absolute authority that
> the FCC is chartered for on civil radio use.

Better rethink that statement, Lennie. I have had an almost daily
interaction with the implementation of NTIA regulations by the Civil Air
Patrol. I can assure you they are ALL ABOUT ensuring that thier will be done.

Dave Heil had DAILY experience with international law and policies for a major portion of his adult life. YOU spent a couple months in-country of a squalor-plagued third world "nation" and now you know more about iot than he...???

BBBbbwwwwHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

Burke, You'e a RIOT!

>You're pulling your Hare out trying to figure out why there are no cards at
>the DXCC desk to write "VOID" across. Tsk tsk. You've enlisted the aid of
>the RRAP mafia and they've come up empty.

Doesn't take ANY figuring out why there are no cards with your call at the DXCC, desk, Brian. They are useless, that's why...Guys and gals who know how to determine if any given QSL card is "worth" credit know your operation was not valid.

>How much DXCC desk time have you wasted?

I am sure that if he "wasted" any, it wasn't unproductive. It's just one more validation of his assertions in the first place.

>Now what?

Perhaps a good gastrointestinal surgeon to help you get your head back into the daylight, Brian?

>At least you are capable of courteous. I'd like to see more of it from you.

I'll give you the lack of "professional" when it comes to this forum.
However courteous and accurate are generally not problems with the exception of
Lennie. And with the exception of Lennie, who wouldn't admit to winning the
Lottery if his face were on TV, others will tell you that when I am NOT
accurate, I have had the temerity to say "I stand corrected".

Now...as for what we'd like to see from YOU, "accurate" will suffice.

Your couch buddy Lennie "disappeared" for several weeks. So what?

>Kelly gets secret newletters from KF2TI regarding a
>worldwide dx inquiry, then the attorney gets on here and completely
>contradicts the ARRL information and others who have successfully operated
>from there.

Phil did not "completely contradict" anyone, let alone the ARRL. His only "correction" was to demonstrate that a military commander MAY grant permission, but that that permission must be documented...Documented, Brian, means IN WRITING, something you did not have.

>The DXCC desk has to approve overtime hours that will certainly
>be kept from the minutes in QST, and Dave, Dick, Jim, and Steve form a
>concensus.

So far, with the exception of your "say so", you've not been able to provide a single bit of verifiable evidence that contradicts anything WE have been saying.

>The only ones missing are Bruce and Larry.

Bruce has been "missing" since puberty.

>When haven't you been?

Just about everything to do with Lennie, and pretty much most of what's
been going on with you, lately.

Now...WHERE is the written permission to operate from Somalai, Brian?

Where is the acceptance by the DVCC desk?

Steve

>Now Steve was in Somalia?

Didn't say I was. I said YOU have your sequence of events out of order. You have yet to provide any evidence that I am wrong other than your "say so", too.

On the OTHER hand we have a tenured foreign service officer and a communications attorney who have both stated that operation from foreign soil WITHOUT written permission is illegal.

So who do you think >>I<< believe? Also, having operated from foreign soil, albeit nothing as "exotic" as Somalia, I also have experience in foreign operating requirements.

The ONLY place you don't need written permission to operate "from" is on the high seas, but even then you must have the permission of the Master of the Vessel. THEN it's OK to just have "verbal" permission to do so, but it still won't count for DXCC.

Said radio and antenna need to be out of these hills. Hello?
Have you heard of skywave only? NVIS doesn't do squat on
a path CT to CA. Last I looked at their skeds, W1AW
doesn't like to honor Pacific time zone listeners much.

>You should try it sometime. It is plainly and clearly audible in
>northern Europe along with West, Southern and East Africa.

Whoopee. They do that to increase ARRL membership?

The "A" in ARRL is supposed to be "American." Did you
know that there is actually most of the USA to the west of
eastern standard time zone? True. The center of US
population moved west of the Mississippi long ago.

You think that W1AW signals are more important going to
northern Europe, or West, Southern, and East Africa than
to most of the USA?

>Write about what you know of amateur radio.

No problem for the group in here...just Cut and Paste from
the newsgroup for any standard soap opera plot. The Judge
wants to send everyone to prison if they don't like him.
Ultralight is too high without a canula. Dickiebird is tweeting
like he was at Holabird. The one who hangs around iceholes
is waiting for winter. Putzmobile driver continues to rave and
rage, adding charges of incest to fantastic freudian fantasy.
Paratransnit specialist is imitating Richard Widmark searching
for a wheelchair. Jolly group of brothers in harms.

I wrote it up in a script, got a producer with money. Even the
Sci-Fi channel won't accept it...too fantastic. Nickelodeon
and Cartoon Channel said it didn't have humor. The soap

opera specialists thought it too dirty. Discovery channel said "it was nothing new," couldn't be discovered. Food channel said it was tasteless due to poor ingredients. Health channel wanted to quarantine it immediately due to sick characters. Court TV said it should be fined for contempt. AMC thought it un-American, didn't move, wasn't close to being classic. Turning to the Internet, the Crystal Set Society said it wasn't technical enough. I gave up.

Greta Van Susteren sent a note about interviewing Ohm for her law show. The Capitol Gang didn't want little weenie appetizer bits to practice on before air time. History channel expressed some interest in it as a period piece about the 20s. There's a faint spark of hope alternating on the horizon...just get the right key to unlock it. Pandora has this enclosure, you see...

How secret could it have been Brian? You asked for and received a
forwarded copy of the posted e-mail, complete with the senders name and
e-mail address. (BTW, the courteous thing to do would have to to at
least acknowledge receipt with a Thank You!) It verified everything
posted, yet you continue to object. Curious

Yet, as a matter of record, Bruce (a well known QSL Manager) also
disagrees with you.

The answer, No due to lack of documentation and no, to the best of our
knowledge, none ever were

The first response:

Date sent: Mon, 02 Sep 2002 18:03:50 +0000
From: Bruce < @qsl.net>
To: Steve-KF2TI <kf2ti@mindspring.com>
Subject: Re: [DX-NEWS] operation ijn Somalia (1992-1993)

I took care of all the paper work for N3Hxx, who operated as T5/N3H. His
call sign is now N4xxx

During this time period, Somalia did not have a government, and was
under UN control. The DXCC Rules states that under this type situation,
the operator must receive written authorization from the UN, or if
Military, a written authorization from his Commander. Along with this
authorization, some type of proof that they were in the country had to
be provided. I sent the ARRL the Authorization Letter from his
Commanding Officer, and a copy of the US Air Force flight manifest with
him on it, going to Somalia.

He was a US Army helicopter crew member, and operated from a airfield in
Mogadishu. He said he was the only active ham in the area while he was
there. He is now in Afghanistan Piloting a CH47 Helicopter. He has sent
a request to the Afghan government to receive operating privilege there,
but no answer yet.

I hope that helps you.

73/DX, Bruce/Wx4xxx

I had a follow-up question since Bruce did specifically mention the DXCC program, the question and subsequent response as follows:

Date sent: Mon, 02 Sep 2002 20:29:38 +0000
From: Bruce < @qsl.net>
To: Steve-KF2TI <kf2ti@mindspring.com>
Subject: Re: [DX-NEWS] operation ijn Somalia (1992-1993)

Yes, either from the UN, or the Military

Steve-KF2TI wrote:
>
> Thanks Bruce. This answers a ton fo stuff. I appreciate your help.

> ----------
> Bruce / Wx4xxx /E30GA team leader/ ex HL9JV
> http://www.qsl.com/e3.htm

As to DXCC Desk overtime. I sent a 2 sentence question and got back the following:

To the question Is T5/N0IMD valid to DXCC and were there ever any cards submitted.

Fancy???? I'd use the word "rugged".

Rather than stamped sheet metal parts held in place by coil springs and suspended on plastic bearings, the Kent is made from machined solid brass parts, suspended on four sealed ball bearings embedded in a solid brass support structure.

Part 97 says we are self-policing. Do you reject that concept?

> That isn't the same as operating an amateur stations with no permit from
foreign soil.

A permit wasn't required. Go back and reread what the ARRL has to say. Go
back and reread what the other operators had to say about their operations.

"Permission" was required. Permission I got.

OK Dave, let's break it down.

"restricting your lookups to those you check"

What is the difference between lookups and checking? Isn't this redundant?

"before working to French ops on 6m?"

Does the word "to" have any purpose in your statement other than making it even more muddy?

Is this slow enough for you?

What crow? Dave, you need to realize that I was given permission. I know because I was there.

You can go back to working Frenchmen out of band at any time.

Part 97 gives you that right - just as long as you're in band.

Don't worry about being self-policing or using Good Amateur Practice.

Just be who you are.

Maybe that's why I haven't heard Dick's "POP."

Just one possible explanation out of many.

Sorry, but military commanders can give verbals. You should have learned
that while on active duty. NCOs can as well. But the ARRL blurb
specifically said "Commander."

Wonder why the ARRL doesn't specifically say written? Doesn't matter,
because I saw the ARRL info 10 years after returning.

Along with this
> authorization, some type of proof that they were in the country had to
> be provided. I sent the ARRL the Authorization Letter from his

A flight manifest would at least prove I was in Somalia. My expeditionary
medal transcript would as well.

Well, there you have it. Nothing exists.

I wasn't there. I didn't operate. I didn't bootleg. I didn't make the
DXCC desk.

I eat crow.

And all you guys are living in a fairy tale.

Is it?

What are your authorizations in the above fictitious account?

Is it Good Amateur Practice, now that you know he is out of band, to
continue talking to him?

(Note for Dave: notice the typo above? Is it necessary for me to behave as
if Steve's post is unintelligible?)

I have none, only verbal permission.

> Where is the acceptance by the DVCC desk?

Dave would ask you 20 questions about your typo.

Instead, I'll say that a card has to be submitted to DXCC for them to accept
or reject it. I don't know why none have been sent.

Brian

I'm aware who the comm attorney is, and he did correct himself once, so far.
But who is the foreign service officer?

> So who do you think >>I<< believe? Also, having operated from
foreign
> soil, albeit nothing as "exotic" as Somalia, I also have experience in
foreign
> operating requirements.

Steve, I'm sure you would be where there is a country, with a government,
with clerks standing at the Ministry of Communications counter, or where a
SOFA agreement was in place.

But not in Somalia. Even the exhalted Greatest DXer in the World, Dave
Heil, admitted he knew nothing of gaining pemission to operate in Somalia.
He said it repeatedly.

Now he is an expert.

> The ONLY place you don't need written permission to operate "from" is

Exactly. What country is "High Seas?" But none-the-less, why is only verbal permission OK from there?

Honestly, Steve, one day when you're well rested and in a reflective mood, do a google search on "K4YZ and Mark Morgan." Then do another one on "K4YZ and Cutie Boy." It might suprise you what you learn about yourself. These are the things the rest of us see in your and Len's exchanges.

I said I was not a member of the U.S. armed forces. I did not say I
don't have any direct experience with the U.S. military. I have years
of it in fact in adddition to decades in HF ham radio with most of
those in international comms. Radio is radio military and otherwise
and so are physics and antennas, there is absolutely nothing sacred
about DoD radio. I've done W3 to VK with a wire dangling from a tree.
The Putz has not and doesn't have either the first clue about how to
do that or the authorization to do any such thing.

>
>I have none, only verbal permission.

Then, like I said...we (or at least I) can accept taht you THOUGHT you were "legal" from Somalia. In as much as you have no documentation of your authority to operate in T5, it is apparent it was not valid.

>Instead, I'll say that a card has to be submitted to DXCC for them to accept
>or reject it. I don't know why none have been sent.

I told you why...Those who are involved in the DXCC awards program know how to find out if any particular operation was valid or not.

There is no documentation of your operation. Why would they send cards to Newington only to get returned with a "sorry" note attached?

For whatever reason, the reply to this portion appeared near the
beginning of the post. In context, here is where it was suppose to be

> > The answer, No due to lack of documentation and no, to the best of our
> > knowledge, none ever were

>
> Well, there you have it.
>
> I wasn't there.

It does not state that anywhere no does it.

You most probably were. You're facts match with other references

I didn't operate.

So far, the evidence is not totally in, but you'd think on mailing lists
with over 5000+ subscribers. at least one person would have come forward
to acknowledge a contact

I didn't bootleg.

Unfortunately, that seems not to be the case. The evidence, as provided
shows you did need written permission. In fact, except for the US and
it's possessions, you need some sort of written permission form, even
for countries that have reciprocal agreements including Canada. So,
verbal permission was not enough.

I didn't make the
> DXCC desk.

That's correct. With no documentation, your T5 operation could not be
used by anyone who may have worked you towards their country/entity
count.

> And all you guys are living in a fairy tale.

Doubtful. Just those that won't see the forest for the cliff

>He said it repeatedly.

But he DID find out and told you why. He's explained taht repeatedly, too.

>Exactly. What country is "High Seas?" But none-the-less, why is only
>verbal permission OK from there?

Because if you are operating from any ship at sea or any aircraft in flight over international waters, you are required to get the permission of the Captain of the vessel before you operate. Not only is that codified in Part 97, it's both international maritime law and ICAO regulations.

And with the exception of persons working on the VUCC program, there's no DXCC entity available for operation from the high seas. As a matter of fact, DXCC rules specifically forbid operation from ships, even if well within territorial waters of a valid entity. You have to be on terrafirma to be "valid". Several VQ9 operatioons were denied due to the fact that the operator was on board the ship, even though it was well within the lagoon.

Otherwise a lot of those DXpeditions to those rocks and shoals we always read about would be done from a ship anchored nearby...not tents on the rocks...

That's why "verbal" permission is OK from a ship. By the way, there may be other regulations involved if you are not operating from a U.S. flagged vessel. Remember...when that ship is outside another nation's territorial waters, you are effectively standing on "his" soil. Reciprocal agreements apply in many cases.

>Part 97 says we are self-policing. Do you reject that concept?

While operating from Tanzania, Dave was not under Part 97 rules.

However, from all of his posts here, it appears as though all of his operations were completely legal. Again, there's no requirement for YOU to be responsible for teh other guy's illegal operations.

>"Permission" was required. Permission I got.

But not in writing. Ergo for DXCC purposes, your operation was not valid.

All you needed was some clerk to type up a quick letter from your OIC (or whoever gave you your "permission") to state that. That, and a copy of your orders putting you in Somalia would have made this all moot.

>Sorry, but military commanders can give verbals. You should have learned
>that while on active duty. NCOs can as well. But the ARRL blurb
>specifically said "Commander."

"Commander", as understood by most civilians, is the commanding OFFICER,
a person commissioned by an act of Congress. You and I both know that there
are circumstances within the Armed Forces where a senior enlisted person is the
"commander" of the unit, but only within very, VERY limited context. IE: The
Navy and the Coast Guard have senior enlisteds as "captains" of vessels. While
underway they are the same as a "full bird" on an aircraft carrier. However
the OIC of their detachment or squadron is the actual authority over the
vessels.

And in no case can those "NCO's" grant permission to do things reserved
for commissioned officers such as grant permision to operate Amateur Radio from
foreign soil.

>Is it?

The purpose of the inquiry, Brian, was for you to exercise some
out-of-the-box thinking as to "how" it might be legal that I might be talking
to a Novice that I am hearing on 29.660mHz.

I know the answer.

>What are your authorizations in the above fictitious account?

My Amateur Radio license and "his".

>Is it Good Amateur Practice, now that you know he is out of band, to
>continue talking to him?

That's the point, Brian. Can I talk to a Novice that I am hearing on 10
meters? Is there any circumstance underwhich I might legally do this? Consider
the frequency I cited.

Maybe somone can send you an -off-net response and explain to you why it
IS possible for someone to be operating on a frequency that may otherwise be
"illegal" for them.

Gosh, I really hadn't given it much thought.

>For the most part! I still like to have 50 or more watts if I need
>"consistent" or "sustained" communications capability.

Me too. I chose QRP stuff because it's generally small, light, and easy to tote
about. There's an ARO that lives about a block and a half away from my
father-in-law with an antenna farm "to die for." If he's accomodating, you'd
better believe my dit's and dahs will have a full gallon behind them via a huge
tri-bander or a full size 40-meter dipole.

>pass.
>
In addition to all that, a prospective ham can take the same test elements over
and over at the same VE session - limited only by the time alotted by the VE
team and the number of fees the prospective ham is willing to shell out. And a
license can be earned by collecting CSCEs one-element-at-a-time.

In the bad old days a failure meant that you couldn't retest for at least 30
days. Lack of CSCEs meant that some upgrades (like the Extra) required passin
the code and theory at the same test session. Both acted as strong incentives
to be well prepared for the tests.

> Made the job of the VEs more difficult because you had to

Biggest improvement code-wise was the end of multiple-choice code tests.

>And all you guys are living in a fairy tale.

It's more like a fabrication than a fairy tale.

The "references" in this little sub-thread seem to be all from one source who was not actively involved in a decade-old activity. That's high-school-level playing at journalism in attempting to feature "official sources" without giving names or direct identification. When confronted, they will righteously shout with anger "I know this person!" as if that is some kind of credibility. Funny to virtually see their outrage (after being caught in the act).

US males continue a tradition of fish stories and shared locker room bragging. US amateur radio is a hobby carried on largely by white males. The two seem to go hand-in-hand. :-)

>What makes you think I don't know anything about DoD radio ops?

There are several clues openly presented. You speak in
vague generalities, stating claims, presenting no details.

>I said I was not a member of the U.S. armed forces. I did not say I
>don't have any direct experience with the U.S. military. I have years
>of it in fact in adddition to decades in HF ham radio with most of
>those in international comms.

Name some of the "years of direct experience with the U.S.
military," units and dates or time period.

>Radio is radio military and otherwise
>and so are physics and antennas, there is absolutely nothing sacred
>about DoD radio.

There is nothing sacred about amateur radio insofar as physics
of it...yet the practitioners consider it a "different" thing that all
other radio. :-)

>I've done W3 to VK with a wire dangling from a tree.
>The Putz has not and doesn't have either the first clue about how to
>do that or the authorization to do any such thing.

Authorization and regulations concerning radio emitter operation
in the United States is found from links on the FCC website at
their Office of Engineering and Technology. All parts are available
for free download, indirect from the USGPO site. Hardcopy
versions are available direct from USGPO by mail or at a dozen
plus urban branch offices, all at low cost, shipping and postage
free (if standard USPS surface mail).

Kelly is incorrect insofar as another "operating from W3 [land]"
which I have done in Pennsylvania, though from a blade antenna
on an aircraft and comm wagon, not a "wire dangling from a tree."
Not on amateur radio frequencies but rather in the 225-400 MHz
and 1600 MHz authorized bands for DoD.

>Which outgoing QSL bureau lost yer pile of T5 cards Brainiac, the T5
>bureau?

There is no "lunar authority" to give me any "QSLs" from the
moon. Too bad for postcard collectors and BDOFs. Was a
fun thing one time, took only 3 seconds for "confirmation." :-)

Ever work a station on the moon, ultralight? :-)

>Ever work a station on the moon, ultralight?

Why? You haven't.

You may have heard echoes from an Earth based station or you may have commanded a lunar based beacon to respond to a command, however the only thing different between that and what Ham's do EVERY DAY is the distance involved.

Since this is a forum on AMATEUR RADIO, the term "worked' means to have had an exchange of data relative to the operators. This includes callsigns, signal strength and locations, etc.

I doubt your robot provided any of that information.

Again, we are discussing an AMATEUR RADIO format...not some non-germane government project.

>There is no "lunar authority" to give me any "QSLs" from the
> moon. Too bad for postcard collectors and BDOFs. Was a
> fun thing one time, took only 3 seconds for "confirmation."

How many QSL cards have you collected for "working" orbital facilities, Lennie? I have two. Voice. Real operators on both ends. Heck of a lot of more fun than pinging some RF off of an inanimate object, no matter HOW far away it was.

>Kelly is incorrect insofar as another "operating from W3 [land]"
> which I have done in Pennsylvania, though from a blade antenna
> on an aircraft and comm wagon, not a "wire dangling from a tree."

I had some interesting conversations with some NATC folks about you and your days in Johnsville, Lennie. Very enlightening.

Steve

Don't be too hasty, Steve. The reason behind no one submitting a
T5/N0IMD QSL to the DXCC desk could very well be that Brian never had
any QSOs at all from Somalia. Another reason could be that he made QSOs
but never confirmed any contacts.

While it may not appear to you that Brian has a predicament, it seems
that way to a number of us. Brian's high morals and amateur radio
ethics are caught between Iraq and a hard place.

> I don't have any predicament. I hardly ever use predicates. :-)

Your predicament is different, Leonardo--trying to gain respect for your
views in an amateur radio newsgroup as a non-participant in amateur
radio. You are clearly the Rodney Dangerfield of r.r.a.p.

> Tsk, tsk, tsk. Judge Heil is still hot and bothered over that

> get someone to lie down and accept defeat? Tsk, tsk, tsk.

I'm not hot and bothered but the payback is sweeeeeeet--especially in
light of Brian's high amateur radio ethics and morals comments. His
lying down and accepting defeat isn't nearly as much fun as watching him
take a pummeling. You should know a great deal about taking pummelings.

> That radio get to W1AW yet?

I offered no radio to W1AW. I offered one to you in order to satisfy
your "interest in radio".

W1AW mostly uses directional antennas with gain. If they are plainly
audible in Africa off the backs of their antennas, the signal must be
incredible out west--except of course for your particular house.

> You think that W1AW signals are more important going to
> northern Europe, or West, Southern, and East Africa than

You left out two central characters. Leonard Anderson as the "Poor Soul" casting pitiful glances through the restaurant window at those inside who are laughing, talking and enjoying their meals and Brian "Gameshow" Burke trying desperately to buy a clue.

We've done this before too. Hams outside the United States are not
bound by Part 97 of the FCC rules. Do you have any problem with that
concept?

> > That isn't the same as operating an amateur stations with no permit from
> foreign soil.

Are you stupid enough to believe that a couple of generic sentences is
the sum total of information on operating from Somalia?

> "Permission" was required. Permission I got.

Prove it. That'd do away with any question of your integrity and your
high amateur radio ethics.

> > > > > > > Why not look it

That isn't what I wrote. Read it again.

> What is the difference between lookups and checking? Isn't this redundant?

What is the difference between "of" and "to"?

> "before working to French ops on 6m?"
>
> Does the word "to" have any purpose in your statement other than making it
> even more muddy?
>
> Is this slow enough for you?

Dealing with you is painfully slow. I rephrased it and you still don't
get it.

Are you now

restricting your lookups of

those you check before working

to French ops on 6m?

I followed that with, "Do you only check the authorization of French ops
on six meters?"

Good luck on the comprehension portion of the test.

>
> What crow?

Just a bit more from that massive portion sitting in front of you. It
is seasonsed with high amateur radio ethics and morals.

> Dave, you need to realize that I was given permission. I know
> because I was there.

You could use the same argument in claiming you'd been up to the mother
ship for a visit. You need to realize that you have no means of proving
your claim and that others felt it necessary to obtain permission in
writing. You were the only ham in Somalia who seemed to think that
permission in writing was not necessary.

> You can go back to working Frenchmen out of band at any time.

I've never been out of band when working Frenchmen or anyone else.

> Part 97 gives you that right - just as long as you're in band.

Tanzania and other areas outside the U.S. do not operate under Part 97
of the FCC regs. Even if I'm in the U.S, operating under Part 97, I'm
under no obligation whatever to make certain that a DX station is
operating where his country tells him he can operate. I need only make
certain that I am where the FCC permits me to be.
>
> Don't worry about being self-policing or using Good Amateur Practice.

Policing my operation is exactly what I do.

> Just be who you are.

You've already taken issue with that.

> A simple typo. Couln't you figured that one out on your own?

I've learned that it is important to leave nothing to chance in dealing
with you. Just the other night, you made a deal out of a typo I made.

> Or are you deliberately trying to be obtuse because you've no other argument
> left?

There are enough holes in your story to make your typo insignificant.
You are, after all, the one who responded to a serious comment with some
jive about "Ripley" rather than offering an explanation.

> > > I forgot the double standard remarks. They still apply to you.
> >
> > So you are incapable of differentiating between a standard and a double
> > standard.
>
> Explain.

The explanation was in my response above. What you used wasn't an
example of a "double standard". It was only an example of a "standard".

No citation necessary. There aren't any such places where verbal
permission is accepted as proof. Can you come up with one country where
that is true?

> > What permission? You can't produce any permission to operate from
> > Somalia.

> I'm no longer there. I had permission while I was there.

So you say. Prove it.

How do you read "little time or effort" and understand it as "monumental
effort"? The obvious end is the end of your high amateur radio ethics
and morals tales.

:-) Tsk, tsk, tsk. Brian has no "predicament." He was there.

Judge Heil keeps trying to pound on him for personal reasons,
a conventional newsgroup tactic used by those who can't play
well with others.

Why does Judge Heil keep pretending he is some kind of
judge "ruling" on the admissability of decade-old activity?

>> I don't have any predicament. I hardly ever use predicates. :-)
>
>Your predicament is different, Leonardo--trying to gain respect for your
>views in an amateur radio newsgroup as a non-participant in amateur
>radio. You are clearly the Rodney Dangerfield of r.r.a.p.

Poor baby. You don't realize what you are writing.

These are all just words on a screen. Individuals giving opinions
or information or, in your case especially, hitting on those you
don't personally like. Tsk, tsk, tsk.

You don't like me, haven't liked me since the day I expressed an
opinion that [OOK] CW isn't a good practice on an RTTY circuit.
Poor baby. Also a rather poor country (Guinea-Bisseau) where
you were the only amateur radio operator. I am absolutely sure
and will agree that you were the very best radio amateur in all
of Guinea-Bisseau when you were there. :-)

Judge has a problem in talking with groups. He has to let
personal emotions take over from objective discussions on
subjects not originally about individuals or their egos.
Witness the following -

>I'm not hot and bothered but the payback is sweeeeeeet--especially in
>light of Brian's high amateur radio ethics and morals comments.

Why to you take on the mantel of Supreme Arbiter on subjects
where you weren't, could not, be a participant? No one
authorized the Judge to his bench.

Why do you take such delight in making fun of others?

>His
>lying down and accepting defeat isn't nearly as much fun as watching him
>take a pummeling.

Brian Burke doesn't seem to be "taking a pummeling." The only
reason this particular sub-thread is going on ad nauseum is that
Judge Heil refuses to stop. Heil wasn't there, isn't an authority
on Somalia then or now. All Judge Heil seems to be doing is
trying to get the Last Word by hitting on another.

Judge Heil has now expressed his "delight" in hitting on another.
Continually hitting on another. That is perverse, antisocial
behavior anywhere.

If this keeps up, the newsgroup title ought to be changed to
"rec.radio.amateur.sociopathy."

>You should know a great deal about taking pummelings.

What makes you think all this is physical? This newsgroup
activity is all mental. The only "pummeling" that happens is
in the mind of the reader...especially readers with oversensitive
egos who cannot ever be told they are incorrect.

>> That radio get to W1AW yet?
>
>I offered no radio to W1AW.

You should do as I suggested. W1AW likes to get free
equipment. Everytime they do, there is a nice little story on
ARRL website. Maybe it's for the new ARRL membership
drive in Africa?

>I offered one to you in order to satisfy your "interest in radio".

Of course you did. :-)

Was it an old Philmore crystal set kit that you couldn't
assemble correctly? :-)

Oh my, doesn't that just touch the heart? An offering of a
RADIO to "someone with an interest in radio!" Call the

networks, the news services! Get K6DUE for a live,
on-air reporting over CNN!

<voice-over of The President on stock video of waving flag>

"This year's Humanitarian Award should be immediately
offered to Judge Heil for that superlative, heartfelt gesture.">

<remote of Reverend Billy Graham wiping eyes>

"I am beyond words in gratitude. A "superior" coming down
from Mount Olympus to "offer" something to the commoners!"

<cut to stock shot of poorly-clad peasants dancing around
a strange object in a small village in the west>

Yassah, mastah, thankee thankee!

<cue Roy for sign-off, tell him NOT to say "NBC" again>

<fade with stock shot super of waving ARRL flag>

Yep, and without any proof of permission to operate from Somalia, the fabrication would appear to be Burke's. The only part I haven't really figured out is what you have to do with any of this.

There are actually several sources--a QSL manager, an actual operator from the period in question whose cards are valid for DXCC credit and finally, the DXCC desk.

> US males continue a tradition of fish stories and shared

> :-)

Big grin discounted, how did you manage to go from "U.S. males" to "white males"? How many fish and locker rooms are involved in amateur radio? I'd think it as peculiar to find a non-athlete in his seventh decade hanging about the locker room as to find a non-ham in his seventh decade hanging about an amateur radio newsgroup inserting his comments into a debate over 1) amateur radio operation and 2) DXCC accreditation.

You didn't work the moon, Mr. Wizard.

> Ever work a station on the moon, ultralight? :-)

I have worked stations on other continents on 144 MHz using the moon as
a passive reflector. QSL cards were exchanged.

Tisket, tasket. No ticket in your basket. Is this one of those, "do as
I say, not as I do" things?

> You don't like me, haven't liked me since the day I expressed an
> opinion that [OOK] CW isn't a good practice on an RTTY circuit.

You see just how wrong you can be, Len? I haven't liked you since the
first day I ever read one of your long-winded diatribes on this
newsgroup. My encounter with you happened some time that.

> Poor baby. Also a rather poor country (Guinea-Bisseau) where
> you were the only amateur radio operator. I am absolutely sure
> and will agree that you were the very best radio amateur in all

>
Is this another of those "Do as I say, not as I do" things, Len? You
aren't aren't a ham, yet you have plenty to say about how amateur radio
should be. You aren't an ARRL member but you have oodles of negative
things to say about the League. Brian took it upon himself to take me
to task over something in which he was not involved. You made no such
statements to Brian when he initially brought it up nor during any
subsequent occasion during which he felt called upon to call my
character into question. That fact is quite interesting. When Brian's
high amateur ethics and morals bite him in the ass, you decide that you
are somehow involved.

> Why do you take such delight in making fun of others?

Why did you not ask this of Brian some time ago? Why have you never
asked it of yourself?

> >His
> >lying down and accepting defeat isn't nearly as much fun as watching him

> trying to get the Last Word by hitting on another.

Only to you does Brian not seem to be taking a pummeling. One reason
this thread is going on ad suo nauseum is that Brian persists.
Anderson, it should be pointed out, was not there, isn't an authority on
Somalia, isn't a DXCC holder and isn't even a ham. Tell us again why
you are involved.

> Judge Heil has now expressed his "delight" in hitting on another.
> Continually hitting on another. That is perverse, antisocial
> behavior anywhere.

This invoked room-shaking laughter upon considering the source.

> If this keeps up, the newsgroup title ought to be changed to
> "rec.radio.amateur.sociopathy."

...at least we'd stop asking ourselves why Len Anderson is haunting it.

> >You should know a great deal about taking pummelings.
>
> What makes you think all this is physical? This newsgroup

Izzat what you read into "taking a pummeling"? Did you believe that to
be a description of a physical action? What a loon!

Others in here think Somalia falls under Part 97.

Even if I'm in the U.S, operating under Part 97, I'm
> under no obligation whatever to make certain that a DX station is
> operating where his country tells him he can operate. I need only make
> certain that I am where the FCC permits me to be.

Careful with that one. Riley thinks something called "Good Amateur
Practice" is enforceable.

> > Don't worry about being self-policing or using Good Amateur Practice.
>
> Policing my operation is exactly what I do.

Not very well. Recall the French 6M ops who were calling you out of band?

> > Just be who you are.
>
> You've already taken issue with that.
>
> Dave K8MN

Only when you do something unethical.

So radio is radio?

You know Brian, you're on the wrong side of the argument to be saying things
like that. You're on the side that says if you don't have the rank, you
cannot comment.

> I've done W3 to VK with a wire dangling from a tree.

Oh, now there's a T5 Buro? I don't know if the ARRL outging buro lost them,
but I sent them.

Why?

Let me check my logs - hold on a sec.

Nope, I didn't send you a card.

Steve those two turkeys are a pair of wannabees, clearly
seen by their responses.
If they actually knew anything about radio, or even ham
radio, they'd not make
such fools of themselves. You and most other actual ham ops,
as opposed to just
holding a license or not even that, as The Putz, know what
it it meant. B2's
coming and going generally don't communicate in open
understandable English.

Trying to count on one hand again?

"Truthful" wasn't one of your options. Count again.

Look, Jim. If the ARRL VEC can substitute a 13-15WPM Farnsworth exam for
the mandated 5WPM Morse exam, they surely could reject re-examinations at

their test sessions and test only once a month or once a quarter. Problem solved, unless the idiot wants to drive from test session to test session all across the state.

> > Made the job of the VEs more difficult because you had to

I think it was lowering the top code speed to 5WPM.

So you did something wrong. Just admit it and learn from it.

I said that I wished I had written permission. That doesn't mean that I
didn't have permission, it only means that I wished I had asked for a letter
or a form. Live and learn.

OIC's have no command authority. They can give verbal orders, but the ARRL
blurb
specifically said "Commander."

Steve, this is good info for DXCC Rules.

Is the ARRL/DXCC the authority on what is legal/not legal?

Or are they the authority on what they accept and don't accept.

Dave was confusing thise point early on.

Some guy said? Do you have anything else? This is what the ARRL really
says:

Somalia (T5)
At this time to operate in Somolia you would need permission from the United
Nations or your military commander.

There is no IARU-member society.

> I didn't make the
> > DXCC desk.
>
> That's correct. With no documentation, your T5 operation could not be

For DXCC. Would all other wards programs also reject my card?

> > And all you guys are living in a fairy tale.
>
> Doubtful. Just those that won't see the forest for the cliff

You mean "...for the Tree?" No, that doesn't even make sense. Never did.

Hang on there Dave, I'll check my log books.

Nope, Len is in the same predicament as you on this one. He's not in my
Somalia log either.

Unless I said "Tanzanian stations out of band." What do you think I said?

It was fine while was there. It was in my commander's mind while he was
there. He knew. I knew.

> > > > > > The ARRL web site gave the particulars of obtaining permission

You demand paper from me? I demand paper from you. Cite it or shut up.

There aren't any such places where verbal
> permission is accepted as proof. Can you come up with one country where
> that is true?

Somalia while I was there. If anyone had asked, "Hey, what's that guy doing
on the radio, my commander would have said, "He's operating in the amateur
service with my permission."

> > > What permission? You can't produce any permission to operate from
> > > Somalia.
>
> > I'm no longer there. I had permission while I was there.
>
> So you say. Prove it.

I don't have it any longer. It expired when I left.

Now make the citation.

Actually I wanted to find out what's what and did so with a minimum of
muss, fuss or bother. Just because I didn't post everything up front
doesn't mean I wasn't involved. I knew your T5 operation wasn't good
for DXCC right from the start last month. All I did was send an e-mail.

>
> Secret newletters, phone calls to the desk, behind the scenes e-mail, a
> regular worldwide search...
>

No phone calls were necessary, Brian. 1 e-mail to the DXCC desk confirmed you never submitted anything. BTW, it's up to the operator to submit his documentation to the DXCC desk. They don't contact you.

No regular world wide searches. 1 post on a prime DX reflector and in 1-2 hours I had the responses. Quite frankly, it took very little effort to get all the information. I'm not sure about the secret newsletter though, you'll have to ask the other Brian.

Quite frankly, anyone, including you could have gotten the exact same information.

Such is life. I have no doubt you had verbal permission. But the fact remains, in order to legally operate, as you so righteously claim, you did need written permission. Chalk it up to "you got one past the authorities" and maybe everyone will leave it at that as well.

I certainly do

I was legal. As long as I was there and my commander was there. I left and
my permission expired.

> >Instead, I'll say that a card has to be submitted to DXCC for them to

Brian, I know you're trying to do me a favor in proving my statement.
You didn't provide options. I did. If you are truthful, you are not
lying. Then the second item becomes the only remaining option. Sheesh!

No, I'm the one who found it on the ARRL web site and posted it. It
confirmed what I had been told by the other in-country ham.

> >Exactly. What country is "High Seas?" But none-the-less, why is only

You omitted the part about verbal. Please cite it.

> And with the exception of persons working on the VUCC program,
there's no

Yes, yes, yes. But your example wasn't in territorial waters. It was in
International waters.

Do you want to talk about amateur operations from a vessel within sight of
land now?

> Otherwise a lot of those DXpeditions to those rocks and shoals we

Why? Are you talking about DXCC again?

But that's illegal, I'm told. Must be in writing. Do you have the citation
where verbal is legal?

By the way, there may be
> other regulations involved if you are not operating from a U.S. flagged
vessel.

Yes, yes. What would I need if I were anchored off of Mogadishu port?

Excuse me, Mr. Ethics. Len asked about my being in Somalia. I'm pointing out that he is injecting himself into the conversation and that HE has never been in Somalia nor is he a ham or DXer. Allow me to point out that you were not in Tanzania either. Didn't seem to even slow you down.

So it was a monumental task to get Steve to post? I wrote "little time
or effort" because I meant "little time or effort".

All the "sourpusses" dimissed your alleged verbal permission when
evidence exists that others felt it necessary to obtain written

permission to operate from Somalia. I assume that you think us to be "sourpusses" because we think you to be one square-headed individual.

Dave, that's almost a valid point. Either it is, or it isn't.

If it is, then you'll recognize that you have nothing to say about Somalia.
If it isn't, then you'll recognize that Len can get involved in any way he
chooses.

Which is it?

I would know - I was there.

Not according to the DXCC desk, you don't. The usual problem with
non-accepted operations are that the ops aren't where they said they
were or that they don't have sufficient documentation to establish
permission to operate.

True, a bent cover handbook probably has a broken CD.

What, no member services?

Would have been nice if an incoming card were rejected and they notified me.
After all, it had my callsign on it.

They're all over me if my membership is about to expire.

Oh well.

I said nothing about what others think. You commented on Part 97. I
told you that it does not apply to stations operating outside the U.S.
and its territories.

> Even if I'm in the U.S, operating under Part 97, I'm

>
> It was meant to be that you can, "Believe me or not."

Then I should send it to you. By the way, I made the statement. You
said nothing to disbelieve except for your "double standard" comment. I
addressed that comment.

> > > > > I forgot the double standard remarks. They still apply to you.

> Ripley's is a standard?

I never made reference to Ripley's except to say that it wasn't the part
I was having difficulty with. Read it again. You may eventually get it
right.

> > > > > > > > > > > > I was never out of band.

To me it read that I was out of band while working Frenchmen. If you
meant "French stations who were operating out of band", why didn't you
just write that?

> > > > > > Did you get your permission in writing from that Naval Commander?

I don't believe I'll do either. There's enough evidence to support my
claim that there are no such places.
>
> There aren't any such places where verbal
> > permission is accepted as proof. Can you come up with one country where
> > that is true?
>
> Somalia while I was there. If anyone had asked, "Hey, what's that guy doing

> on the radio, my commander would have said, "He's operating in the amateur
> service with my permission."

That isn't true based on the information provided by others. We have no
way of knowing what your commander might or might not have said and you
have no way of proving that you obtained his permission. We don't even
know if he had the authority to issue valid permission.

> > > > What permission? You can't produce any permission to operate from

OK, then what other "possible explanations" do you have for why nobody
has ever applied for dxcc credit with one of your T5 cards? Where are
the logs fom your T5 "operation"?

I recall Steve writing that he believes you had verbal permission. That
wouldn't indicate that he believes you weren't there.

That'd be silly on your part. I operated where I was permitted to
operate under my documentation (which I still have) and at no time did I
lure innocent French stations to break French regulations. By the way,
have you checked up on the Poles, the British, the Dutch, the Italians
and the rest of those suspicious Europeans? Maybe they were breaking
their regs too in working me.

No, really. It had to do with coordinated repeaters and uncoordinated
repeaters. Who knows where a precedent like that would lead.

> > > > Don't worry about being self-policing or using Good Amateur
Practice.

Exactly. It's the only Internet provider I have had unless you count
the many manifestations that existed before..all being bought and
subsequently sold Planet.net became interactive.net became
mindspring.com.

As before, the callsigns have been changed to prevent the non-hams in
RRAP from harassing the originators. As before, copies are available of
the full and unedited e-mail(s) in question.

>
> Steve, this is good info for DXCC Rules.
>
> Is the ARRL/DXCC the authority on what is legal/not legal?
>
> Or are they the authority on what they accept and don't accept.

Actually it's both. In order to accept a submission for a DX operation,
the operator(s) must submit documentation that they operated legally
within that particular country/entity, that would mean written
permission in many cases, especially the one being bantered about here.
This insures that the operation did take place within the borders of the
country/entity being submitted. Several DX'ers who failed repeatedly in
this case were Don and Romeo (of P5 fame)

So in answer - - From the DXCC Rules: Accreditation Section
(http://www.arrl.org/awards/dxcc/rules.html#siii)

1. Each nation of the world manages its telecommunications affairs
differently. Therefore, a rigid, universal accreditation procedure
cannot be applied in all situations. During more than 50 years of DXCC

administration, basic standards have evolved in establishing the legitimacy of an operation.

It is the purpose of this section to establish guidelines that will assure that DXCC credit is given only for contacts with operations that are conducted with proper licensing and have established a legitimate physical presence within the Entity to be credited. Any operation that satisfies these conditions (in addition to the applicable elements of SECTION I., Rules 6, 7, 8, and 9) will be accredited. It is the intent of the DXCC administration to be guided by the actions of sovereign nations when considering the accreditation of amateur radio operation within their jurisdiction. DXCC will be reasonably flexible in reviewing licensing documentation. Conversely, findings by a host government indicating non-compliance with their amateur radio regulations may cause denial or revocation of accreditation. (I add-as evidenced by several recent YO operations)

2. The following points should be of particular interest to those seeking accreditation for a DX operation:

a) The vast majority of operations are accredited routinely without a requirement for the submission of authenticating documentation. However, all such documents should be retained by the operator in the unlikely event of a protest.

(I add- which would answer your questions concerning your Korea and Guam operations)

b) In countries where Amateur Radio operation has not been permitted or has been suspended or where some reluctance to authorize amateur stations has been noted, authenticating documents may be required before accrediting an operation

Additionally:

7. Any Amateur Radio operation should take place only with the complete approval and understanding of appropriate administration officials. In countries where amateurs are licensed in the normal manner, credit may be claimed only for stations using regular government-assigned call signs or portable call signs where reciprocal agreements exist or the host government has so authorized portable operation. Without documentation supporting the operation of an amateur station, credit will not be allowed for contacts with such stations in any country that has temporarily or permanently closed down Amateur Radio operations by special government edict or policy where amateur licenses were formerly issued in the normal manner. In any case, credit will be given for contacts where adequate evidence of authorization by appropriate authorities exists, notwithstanding any such previous or subsequent edict or policy.

And in regards to operating "off-shore"

8. All stations contacted must be "land stations." Contacts with ships and boats, anchored or underway, and airborne aircraft, cannot be counted. For the purposes of this award, remote control operating points must also be land based. Exception: Permanently docked exhibition ships, such as the Queen Mary and other historic ships will be considered land based.

> says:
> ------------------------------------
> Somalia (T5)
> At this time to operate in Somolia you would need permission from the United
> Nations or your military commander.
>
> There is no IARU-member society.

I have 2 other knowledgeable people who have responded contrary to your position. According to many easily found references, with few exceptions, you need some sort of written permission to operate, even in countries that have reciprocal agreements (and yes there are some exce [exceptions to this rule and no Korea is not one of them), you still need to submit a form, probably pay a fee and get a piece of paper that says go ahead operate, here are our rules. Try operating in Mexico on the verbal say so of some Mexican authority

>
> For DXCC. Would all other wards programs also reject my card?

Probably not the E-DXCC offered by the EQSL organization. I would imagine that the other awards would reject your cards for the same "lack of documentation" as the DXCC program did/does, they seem to share similar rules

Because 10 years ago I worked 3 T5/ operators. Ultimately 2 were
accepted, the 3rd actually was working everyone from a ship. I found
out the 2 were ok after I sent them a card, received theirs and
submitted it.

>

Most cases, you'd find out from a someone who had your card rejected and
then would contact the DXCC desk to find out what the rejection was for.

> in my operations from Tanzania, Brian?

I had none. I'm not culpable. On the other hand, a French ham cam on here
and told you thir authorizations. You responded back to him, so at least
you were aware of their authorizations. Then you said you'd continue to
work them as you weren't out of band.

> > > > > Only to you does Brian not seem to be taking a pummeling. One

No, you've been sourpusses for a very long time. Kelly and Dick have had
years and years of practice.

Brian. The "Frenchman" was some guy posting in a newsgroup. I don't
even know if he was a Frenchman. I don't know him to be an authority
with the French PTT or an official of the REF. I certainly don't know
that the information he posted was factual. Len posts in this newsgroup
and I believe very little of what he says.

As I mentioned earlier, I have no idea if the person posting here was
French or had valid information on French licensing.

> Then you said you'd continue to
> work them as you weren't out of band.

I'd have answered in the same manner today. If the guy was interested,
he could have contacted the French PTT about French scofflaws. The
matter was not of my concern and still isn't. Which brings us to your
involvement and insertion of yourself into the matter...

Now JJ, something's you post are pretty good, but
this constant bashing of Cb'rs make you sound like Dave.
He's always calling people communist, you keep calling
anyone that posts drivel from anon accounts as "illegal operating cber". If
you haven't realized it yet, both sides are playing
the game, some for and some against, so it isn't to far fetched
that some are stirring the pot purposely.

Landshark
```

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

>You omitted the part about verbal. Please cite it.

Which verbal part? You can refer to www.faa.gov for the aeronautical regulations.

>Yes, yes, yes. But your example wasn't in territorial waters. It was in
>International waters.

In either case, you must ahve permission of the master of the vessel before erecting and operating a radio station, even if that "radio station" is just a two meter HT. ANY RF device has the potential to create a hazard to navigation, maritime OR aeronautical, ergo it's the Captain's perogative to let you operate.

>Do you want to talk about amateur operations from a vessel within sight of
>land now?

I can be in sight of land and be in international waters. Waht dos it matter?

>>That's why "verbal" permission is OK from a ship.
>
>Why? Are you talking about DXCC again?

Addressed above.

>But that's illegal, I'm told. Must be in writing. Do you have the citation
>where verbal is legal?

Once again...to qualify as a DXCC entity, yo must be on land. Not on a vessel, even if safely harbored in port. To be on land you need a proper license or permit anyway, therefore the rest is moot.

To operate from an underway vessel (unless you happen to own it and have master's papers for it) you need the captain's permission to operate. That may be verbal. But in ANY case, there is no valid DXCC "entity" for an underway vessel. I don't know how they document it for VUCC...In that case simply a QSL card with your signature and "assurance" that you were in the grid you specified is sufficent.

>Yes, yes. What would I need if I were anchored off of Mogadishu port?

If you are within three miles of land? Appropriate permission of the captain of the vessel and documentation from the appropraite temporary regulatory authority, ie" the UN, some approved "ministry", or commissioned officer authorized to render such permission.

Are you outside the 3 mile limit? The captain's OK only.

>OIC's have no command authority.

WHAT BRANCH OF THE ARMED FORCES WERE YOU IN?!?!?!

BBBWWWWahahahahahahahahahahahahahahahahahahahahaha!!!

>They can give verbal orders, but the ARRL
>blurb
>specifically said "Commander."

Then if you want to be that nit-picky, Brian, only NAVAL offocers of
paygrade O-5 (Commander) can issue that authority.

That's gonna tick off a lot of flag rank officers in ALL branches!

>But now that you've said it, it will be believed by all.

Doesn't matter who siad it, Brian...If it's true, it's true, and if it's
not, well, Lennie probably said it.

Don't ask the impossible. Judge Heil will never, ever do that.

There must be order and capitulation in His Court. :-)

[I'll have a side of fries with that order...]

>I said that I wished I had written permission. That doesn't mean that I

>>
>> How is Antique Anderson become involved in any capacity?

He isn't here, sweetums...wasn't in Somalia, either, or Guinea-
Bisseau chomping on cashews while being a "rare one." :-)

Thing of it is, Judge Heil tries snow jobs on others under the
black masque of State Dept. "secrecy" to wow the amateurs
in here. He once tried to say that CW was used as an order-
wire on a State RTTY circuit...which is still dumb as hell
considering the TTY itself provides the writing and can be in
crypto mode on-line. :-) :-) :-)

>> character into question. That fact is quite interesting. When Brian's
>> high amateur ethics and morals bite him in the ass, you decide that you

>> are somehow involved.
>
>And exactly where were you in Somalia? How were you involved?

Careful, the judge may have been the khat-chewing Technial at
the K4 traffic circle, in disguise to monitor ham activity in a no-
government environment...all sponsored by state, of course. :-)

>> Only to you does Brian not seem to be taking a pummeling. One reason
>> this thread is going on ad suo nauseum is that Brian persists.
>
>Each time I will tell you that I had permission.

Judge wants to be The Law east of the Pecos. He will hang in there
adding whatever other charges he can imagine. He wants blood.

A couple of macros can make this whole exchange last forever.
The judge tries to be creative but only manages a frankenstein
monster. The exchange grows on itself in a feeding frenzy as
other shark-wannabes sense blood. The judge won't accept
anything other than capitulation. On his terms.

Doesn't matter anymore. Judge MUST have captitulation.

Yawn.

>Is this another of those "Do as I say, not as I do" things, Len?

If you were the ONLY ham in Guinea-Bisseau, you automatically
qualify as the very best radio amateur there then. Of course, you
also qualify for the very WORST at the same time.

Exclusivity isn't always a good thing, is it? :-)

>> Why do you take such delight in making fun of others?
>

>Why did you not ask this of Brian some time ago? Why have you never
>asked it of yourself?

Poor baby. Identity crisis? You are mistaking yourself for others.

I asked you a long time ago about that 1980s state doctrine of
using CW on an RTTY circuit...which you said (first) that you
thought up ("pretty neat?" you asked then) and (later) said that
it was some kind of State "doctrine" or "procedure."

You've waffled enough to open a new IHOP on that for years,
hiding behind arrogant "don't have to supply anyone with
classified information!"

You just can't take negative criticsm of any kind and try to
bluff your way out when caught. If that doesn't work, you go
into control-freak mode...which is now evident. Overall is this
marvelous layer of sociopathy.

>
>> >His
>> >lying down and accepting defeat isn't nearly as much fun as watching him

>Only to you does Brian not seem to be taking a pummeling. One reason
>this thread is going on ad suo nauseum is that Brian persists.

Those who are in the right (Burke) dislike control freaks who
weren't there, had no authority, have no authority now to
charge him with anything.

Is this how you would handle newcomers to US ham radio?

Acting like some idiot control freak imposing his will on them?

>> Judge Heil has now expressed his "delight" in hitting on another.

>>You'd know this from your vast experience in such activities, right?
>
> Seen enough of it to make correct instant diagnoses over
> computer-modem media.

Oh Geezus

Just like the self-diagnosing idiots that show up at 3AM in the ER after having watched re-runs of "E.R." I love people who get thier medical information from dramatic TV shows wherein "asystole" is called out as "v-tach", and actors who haven't got a clue as to what they are saying rip off multi-syllable diagnosis.

The OPERATIVE word there, Your Putziness, was EXPERIENCE.

>>How is Antique Anderson become involved in any capacity?
>
> It's entertainment.

"Lord of the Rings" is entertainment too...and just about as much fantasy as your "assessments" herein, Your Geritolslurpiness.

>Poor baby. Tried to snooker everyone that time, didn't work, now
> you've been holding a grudge for years. Get over it.

"We" know who has the grudge here, Lennie...It's the NON-Amateur who continues to spout off on matters for which he has no experience.

>Exclusivity isn't always a good thing, is it?

Especially when YOU are the most well know NON-Amateur in a group of LICNESED Amateurs, Lennie.

>Those who are in the right (Burke) dislike control freaks who
> weren't there, had no authority, have no authority now to
> charge him with anything.

In this case Brian is NOT right. His operation, for DXCC purposes, was NOT valid.

>I'm glad you are getting some entertainment. For another box
> of laughs, why don't you pull heads off flies?

Will Mrs Lennie appreciate you running around the house without yours,
Lennie?

>Nobody would really expect the Judge to do anything except
> what the Judge wants.

Such as provide "evidence" to a claim of dishonesty, Lennie? You mean
like that?

>Then send it off to my address. Prepaid. You know what it is.

1313 Mockingbird Lane?

>Since 1956. There's 30 million of us.

Which STILL makes you an import, according to "local" definitions, Lennie.
I was there too...REAL Californians can be very specific and very brutal about
what constitutes being a "Californian". You meet the "legal" deifiniton,
certainly...but "real"...Nope. Just a pretender...Just like in Amatuer Radio.

>how long it takes you to produce your verifiable truths of League dishonesty.

Well...four days later and Lennie has certainly been active in the NG, but
declines to present his evidence of alleged dishonesty at the ARRL.

I think we can write off yet another Leonard H Anderson "verifiable truth"
for what it is, and that is anything BUT the truth. A fabrication...

A LIE ! ! !

Thanks, Lennie...Just in time for my birthday.

Steve

Don't need your non-card, I had legitimate T5 nailed eons ago. So you do still have the logs eh? Good. Now post the callsigns, freqs, modes, dates and times of five contacts you had from T5 and we'll get this nonsense resolved.

>The NTIA has come out against the 5.2 MHz secondary allocation
>for Ham radio. This will be the death or delay for a few years
>of a 5.2 MHz band. Oh Well...
>
>http://www.arrl.org/news/stories/2002/09/05/101/?nc=1

Doesn't look good. So here's a 'devil's advocate' view:

What we hams are asking for is permission ot share 5.25 - 5.4 with other services who are currently there. We will do our best to avoid interference with those other services.NTIA isn't convinced.

But how would we hams react if we were being asked to share a band or bands that are now exclusively amateur? Say, 3.6 to 3.8 MHz? Or 144-146 MHz?

Trick questions don't prove a thing. Your question was not a trick.

Here's a simple fact:

You will not see any proof of ARRL dishonesty from Mr. Anderson. He doesn't have any such proof. A person who had such proof would post it, or a link to it. This was all clear from the long boring exchanges in other threads.

>>Is there any lack of such milestones?

>But how would we hams react if we were being asked to share a band or bands
>that are now exclusively amateur? Say, 3.6 to 3.8 MHz? Or 144-146 MHz?

True, Jim, but how many of our bands do we share, and do so efficiently for
all concerned? This need not be an "exclusive" allocation.

There's no reason that can't happen here. Also, they operate on a few
discreet channels, not the entire band. In as much as hams are NOT channelized
on HF, a 200kHz loss there could be catestophic to us, but we'd adapt.

And how about we lopp off 146-148...at least that way we'd be harmonious
with the rest of the world!

Amateur Radio Newsline™ Report 1308 – September 6th, 2002

Amateur Radio Newsline report number 1307 with a release date of Friday, September 6th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. 222 to 225 MHz comes under attack once again, N Sync's Bass may not fly to the I-S-S after all and an Ohio city regulates 11 meter C-B. Find out the details exclusively on Amateur Radio Newsline report number 1308 coming your way right now.

(Billboard Cart Here)

**

THE WAR TO SAVE OUR BANDS: A NEW ATTACK ON 222 - 225 MHZ

Some are calling it Deja Vous. This as big business once again sets its eyes on grabbing a ham band and converting it into a money making machine. And once again its the old 220 MHz band. David Black, KB4KCH, is here with the details:

--

Once again, amateur radio frequencies may be under siege. Large corporations wanting to become even bigger want hams off the 222 to 225 MHz band, so they can make money. This time, the challenge comes from Data Commlink Incorporated and its twenty electrical cooperatives. Data Commlink filed comments in W T Docket 02-224.

That's an FCC proposal that began innocently enough. The proposal sought to gather comments on requests for waivers to provide band management services in the 220 to 222 MHz band. That's the piece of spectrum that used to belong to Amateur Radio but which hams say was stolen by greedy businesses over a decade ago.

But page 10 of DataComlink's filing holds comments that strike straight at amateur radio. The company says quote--the spectrum at 222 to 225 MHz that is currently held by the Amateur Radio Service is being underutilized. In the early days of 220 MHz commercial regulations, amateur Service licensees argued that their spectrum was necessary and important in order to provide communications in the event of disaster or emergency. Although we take no issue with this claim, we do not feel that the 222 to 225 MHz band has been utilized as well as Amateur Radio claimed it would by so-called no-code hams in their efforts to keep a foothold in the 220 MHz arena.

The filing then presents a direct challenge to ham radio. Without citing any evidence, Data Comlink asserts that in nearly all densely populated areas, the 222 to 225 MHz band is largely quiet. The company claims that only what it terms as handful of individuals in the Amateur Radio Service even use the

spectrum. Data Comlink then says hundreds of thousands of potential commercial users wait with no alternatives.

Data Comlink tells the FCC that--with considerable commercial interest already in the 222 to 225 MHz band because of waiver requests--it feels that the frequencies amateur radio holds would be much better utilized for commercial use. The company says existing users of the spectrum -- ham radio operators -- are so few in number that the economic impact on those affected would be minimal.

As for where the thousands of US hams who actually do use 220 to 225 would wind up, Data Comlink says nothing. Another issue is left unaddressed. If the FCC were to actually give the Data Comlink proposal any serious consideration, who would reimburse repeater owners the hundreds of thousands of dollars invested in their systems? DataComlink is silent on that one.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.
--

What credence will the FCC give the Data Comlink idea? That's hard to say. Since it comes in the context of comments on another matter the Commission could simply rule that anything dealing with 222 to 225 MHz is not germane to the issue. On the other hand, the FCC could use the Data Comlink commentary as the basis for a Notice of Inquiry aimed at reallocating the 222 to 225 MHz band to commercial use. Which way they will go will not be known for a few months at the latest. In the meantime ham radio had better keep a close eye on the situation so that nothing is covertly slipped by.

The complete Data Comlink filing is on the web at http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6513289200 (From comments filed to FCC by Data Comlink)

**

RADIO RULES: BAND SHARING REQUEST FOR 70 CM

The ARRL news reports that an amateur from Virginia has petitioned the FCC to allocate eight channels in the 70-cm band for use by visitors from Europe and the United Kingdom with Personal Mobile Radio transceivers. The recently authorized PMR 446 is similar to the US Family Radio Service. Dr. Michael Trahos, KB4PGC, a physician from Alexandria, filed the petition last January, saying it would help to promote international goodwill. The FCC has designated the petition as RM-10521. (ARRL)

**

ENFORCEMENT: HAM CHARGED WITH MISDEMEANOR IN ILLINOIS TRAGEDY

An Inverness Illinois man who authorities say misused a police radio channel has been ordered to turn over all the radio gear that he owns to local authorities. Bruce Tennant, K6PZW, has more:

--
According to a report in the Chicago Tribune Cook County Judge Joseph Urso has

ordered that William Bily turn over all his transmitting equipment to Barrington-Inverness police. This, as a condition of his release on bond while awaiting trial on misdemeanor charges.

Bily appeared August 30th in the Rolling Meadows branch of Cook County Circuit Court in connection with misdemeanor charges of resisting a peace officer and interfering with emergency communications. A longtime amateur radio enthusiast, Bily is said to have disrupted police communications Sunday August 25th by transmitting over the Barrington-Inverness police radio channel. When Officer Steven Graham came to his home, Bily allegedly resisted arrest. Authorities say that a struggle ensued and that during their tussle Officer Graham who was only 53 suffered a fatal heart attack.

Asserting the heart attack resulted from the scuffle, the Cook County medical examiner's office ruled Graham's death to a homicide. But Assistant State's Attorney Steven Rosenblum said that his office does not intend to seek more serious charges against Bily.

Bily's attorney, Frank Cece, asked that his client only be forced to hand over radio gear that could be used to transmit on the police radio band. He maintained that Bily, a Marine veteran who saw combat during the Vietnam War, has much equipment that poses no risk to police radio frequencies.

But States Attorney Rosenblum countered that this is not the first occasion police had visited Bily's house. The first time was on July 4th of 2000, also for allegedly interrupting the police frequency.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.
--

As part of the bond agreement Judge Urso also ordered that Bily not possess any firearms and that he not contact the family of the deceased officer. A trial is set to take place on October 2nd in the Rolling Meadows courthouse.
(Adapted from information supplied by KC9RP, W9FS and others)

**

ENFORCEMENT: “RABBIT EARS” THE HAM JAMMER GETS JAIL

A CB operator from Florida with an apparent hatred of hams will spend the next year in a federal prison. Amateur Radio Newsline’s Bill Burnett, KT4SB, reports from Miami.

--
He called himself Rabbit Ears on the C-B two-way. He also harassed ham radio communications on several bands. And now, Jupiter Florida Citizens Band operator William Flippo will spend a total of 15 months in federal prison. He will also pay a $25,000 fine for jamming Amateur Radio communications and transmitting without a license.

According to the ARRL Letter, Federal District Court Judge Daniel Hurley imposed the sentence August 29th. This, following a guilty verdict on June 19th on four counts of operating a radio transmitter without a license and another four counts of deliberate and malicious interference.

According to trial testimony, Flippo primarily had targeted members of the Jupiter-Tequesta Repeater Group for jamming and regularly interfered with amateur operations, especially on 10 and 2 meters, over an approximately three-year period. He has been in custody since the guilty verdict and underwent a psychiatric evaluation prior to sentencing.

At the sentencing, Flippo reportedly wept. He said that he had turned over a new leaf and claimed he was sole support for his wife and two daughters. But Judge Hurley was not impressed. He told the 60 year old Flippo that he was old enough to have considered the consequences of his actions. Hurley also alleged numerous incidents of perjury in the course of Flippo's testimony during his six-and-one-half day trial.

Judge Hurley also told Flippo that wants a full financial disclosure from him. And when he does get out of jail, Flippo will spend another year on supervised probation during which he cannot own radio gear or firearms. In other words, for the next two years the law will be watching this C-B'er like a hawk.

In Miami, I'm Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.
--

Judge Hurley ordered Flippo to immediately start serving his sentence. The former C-B operator was reportedly led into and out of the courtroom in shackles and leg irons. (ARRL, others)

RESCUE RADIO: HAMS, CB'ERS, GMRS AID AFTER TORNADO

Hams, C-B's, and just about anyone with a radio system not dependent on phone lines is pitching in to provide emergency communications in Ladysmith Wisconsin. This follows a devastating tornado on Monday, September 2nd that destroyed a major part of the town and completely knocked out the areas communications infrastructure. Twenty people were injured.

As we go to air, there is still no wireline telephone service and cellular service is spotty at best. The personal communications teams are reportedly augmenting local law enforcement and fire services in relief efforts. Wisconsin Governor Scott McCallum declared the Ladysmith a disaster area. (Published news reports, on-air reports)

**

HAM RADIO IN SPACE: RUSSIA TELLS BASS HES OUT OF ISS TRIP

A Russian space official said on Tuesday September 3rd that N Sync singer Lance Bass has been asked to leave Russia's cosmonaut training program and will not be the world's third space tourist. Sergei Gorbunov, a spokesman for the Russian Space Agency, said the decision to end negotiations with Bass was made in connection with what was termed as violations of his contract to fly on a supply mission to the orbiting outpost.

Bass began training in July at Star City, and just returned to Russia on Sunday after spending a week at NASA's Johnson Space Center in Houston with the other two crew members. There, Bass was trained in use of several station systems including the ARISS ham radio station. Now, Gorbunov said Bass, who had hoped to fly to the Space Station aboard a Russian Soyuz rocket on October 28th, would be leaving and would not be permitted to return.

Gorbunov said that in place of Bass, the Russians would likely send up a cargo container with extra equipment needed on the International Space Station. Gorbunov said the container has already been prepared and is ready to go.

But Bass’s representatives have a different story. They say that that its all a misunderstanding and that the 23 year old singer should be back in training shortly. If he does make it to orbit, Bass will become the youngest person to ever fly in space. (Published news reports)

RADIO LAW: LANCASTER OHIO HAS NEW CB CONTROL LAW

Lancaster Ohio now has a new City Ordinance to put teeth into local enforcement of the FCC’s Part 95 CB radio rules. The measure was passed on August 26th and is the handi-work of Lancaster City Law Director David Trimmer and a local area radio amateur named John Hilliard, W8OF. The two put the legislation together over the last several months and sent it twice to the FCC office in Farmington Hills, Michigan for review and comments.

Under the law, CB radio users who operate on what’s termed as an unlawful frequency or using excessively powerful equipment could be cited for a misdemeanor, with a maximum penalty of 180 days in jail and a $1,000 fine. Ham radio operators are exempted because the city says that they are trained, licensed, are regulated differently under federal law.

City officials estimate there are at least 250 people operating 11 meter Class D CB radios in Lancaster and not all follow FCC rules. The city's law will give prosecutors a tool to fight these abuses. The FCC believes that Lancaster is the first municipality to enact such a far-reaching ordinance to regulate CB radio within the city limits. (ARNewsline™ from information supplied by W8OF)

**

ENFORCEMENT: YUCAIPA CALIFORNIA TEST SESSION INVESTIGATION CONTINUES

The FCC audit of a W5YI-VEC Amateur Radio test session in California is continuing. The ARRL Letter reports that so far, the probe into a September 1, 2001, examination session in the city of Yucaipa has led to the suspension of seven volunteer examiners and the cancellation of five Amateur Radio licenses.

The W5YI-VEC's Larry Pollock, NB5X, said possible irregularities surfaced earlier this year in the form of an e-mail and a telephone call concerning two candidates at VE sessions in Yucaipa. Pollock said that one of the reports was that a license had been purchased in California. The other was that the individual in question could not copy code, and that if he had passed the exam, he had done so fraudulently.

After considerable investigation on his own, Pollock said he saw enough questionable data that he felt retesting was in order. That’s the remedy he proposed to FCC Special Counsel for Enforcement Riley Hollingsworth, K4ZDH. That was the action taken and also the action which lead to the five cancellations. The FCC’s Hollingsworth said the agency would continue to investigate other examinations administered by the VEs involved in the September 1, 2001, session in Yucaipa. (ARRL)

ENFORCEMENT: MAN MADE QRM ON 20 METERS

The Maritime nets on 14.315 MHz are reporting problems with interference. VK2UW says that the interference appears to be man made and regularly appears as both noises and CW type transmissions. The Australian Communications Agency has been notified and is monitoring. (Q-News)

**

HAMFESTS: TRW SWAP MEET FOR SEPTEMBER CANCELED

A reminder. If you are planning to travel to Los Angeles this September to attend the famed TRW Swap Meet, choose some other month. This is because the giant swap-feast has been canceled because a corporate event will be held at the Space Park Facility on Saturday, September 28th.

Only this month, September, is canceled. There will be a TRW Swap Meet the last Saturday of the month in October, November and December. For more information visit http://w6trw.com on the world wide web. (TRW ARC)

**

CONVENTIONS & HAMFESTS: BOXBORO MASS GROWS

Attendance at this years Boxboro Massachusetts Hamfest seemed to be back to its normal level of about 3,000. This continues an upward spiral first noted a few weeks ago at the Huntsville Hamfest in Alabama.

According to observers, the exhibit hall was busy all day Saturday and there seemed to be an increased number of big-ticket sales. This again mirrors what happened at the shows in Huntsville and to a lesser degree in Escondido California that same weekend.

The biggest draw in the forums area was once again Bob Heil, K9EID, and his audio clinic road show. Bob had about 100 people in the room, many of whom left the session and immediately hit the dealers to buy the appropriate peripheral gear.

Boxboro is one a dwindling number of hamfests and conventions that still has an annual banquet. This years speaker was ARRL President Jim Haynie, W5JBP. Also on the program was live music from a four piece band.

How good was this years Boxboro Hamfest? Vertex-Standard's Chip Margelli, K7JA sums it up this way. He says that he couldn't leave the booth or take a break until 4:15 Saturday afternoon. And that kind of says it all. (K7JA, others)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

INTERNATIONAL - SOUTH AFRICA: HAMS CONTINUE TO ASSIST AT WORLD SUMMINT

Ham radio is continuing its support effort at the U-N Sponsored World Summit on Sustainable Development. With the latest, to Johannesburg and Hans van der Gronnendal, ZS6AKV:

--

AUDIO REPORT ONLY: You can hear it at http://www.arnewsline.org

--

More on ham radio at this important world summit next week.

**
INTERNATIONAL – SOUTH AFRICA : JOHNNY NEETHLING, ZS1GB – S.K.

Still from South Africa comes the sad news that Johnny Neethling, ZS1GB, passed away on Friday 19 July. Neethling as 80 and was licensed just after World War 2. ZS1GB was well known in Radio and TV circles. He was also involved in maintaining equipment in the first the first heart transplant operation to take place in South Africa. (RSGB)

**

INTERNATIONAL - GIBRALTER: WILFRED GUERRERO, ZB2IB – S.K.

Q-News reports the unexpected death of well known Gibraltar radio amateur Wilfred Guerrero, ZB2IB. Guerrero was 55 years of age and for many years was the mainstay of amateur radio in Gibraltar. Most recently he pioneered,

virtually single-handedly, the introduction of the Foundation License in that nation. (Q-News)

**
INTERNATIONAL - AUSTRALIA: VK UHF CB TECH STANDARDS CHANGE

The technical standards for C-B gear used in Australia are changing. Q-News Graham Kemp, V-K-4-B-B, reports from down-under:

--
APCNews says the VK UHF CB equipment standard is to change. The standard will require that CTCSS equipment include facilities to reduce interference to non CTCSS users. Required features include a 'channel busy' warning light and a 'listen before transmit' function. The changes were required by the Australian Communications Authority following changes that legalized CTCSS signaling on UHF CB channels. From Q-News Australia, I’m Graham Kemp, VK4BB.
--

The change affects only the Australian U-H-F Citizens Radio Service. No other bands are affected. (APC News, Q-News)

**

INTERNATIONAL – SCANDINAVIA: NEW MAJOR HAMFEST IN EU

A major new European amateur radio event will take place in Gothenburg Sweden for the first time in April next year. The Scandinavian HamVention 2003 will be a big hamfest where Scandinavian and other European radio amateurs can get together. There will be a large exhibition with amateur radio dealers from all over Europe and it is planned to offer Scandinavia's biggest flea-market yet, allowing radio amateurs to trade, buy and sell everything to do with our hobby. A traditional Scandinavian amateur radio dinner will be held and there will also be a special ladies' program. The Swedish national amateur radio organization, the SSA, will hold its annual meeting at the same time. Further details are on the Scandinavian HamVention website http://www.scandiham.com/. (GB2RS)

**

DX

In D-X, the Canadian licensing authority, Industry Canada, has authorized the use of special prefixes to celebrate the 125th anniversary of Japanese immigration to Canada. The special prefixes will be on the air from the 1st of September until the 31st of October.

And this for those listening across the Atlantic a lot higher in frequency. Word from the Radio Society of Great Britain that the G-B-3-N-W-K microwave beacons located in North West Kent are currently non-operational. The beacons, which usually transmit on 1296.81 and 2320.85MHz are off the air until further notice due to site problems.

**

THAT FINAL ITEM: 911 REMEMBERED

And finally this week, we pause to remember the tragedy of Tuesday September 11th 2001. Here’s Amateur Radio Newsline producer Bill Pasternak, WA6ITF.

--
I’m going to tile this as an editorial. Ill also promise to keep it short.

We have all heard these words before. “September 11th, 2001 is a day that changed all of our lives forever.”

The pictures are still there in our minds eye. The giant Boeing jets crashing into the World Trade Center. The buildings crumbling to the ground. The fire at the Pentagon. The scorched earth in Pennsylvania.

And the other scenes. The ones only known to ham radio. Those of the radio amateurs from New York, Washington and Pennsylvania who sprang immediately into action. The hams from across America who dropped everything, grabbed their H-T and traveled sometimes thousands of miles -- paying their own way -- to become the second, third and forth wave of relief operators and volunteers.

No, ham radio was not on the front page of newspapers. Hams were not the lead story on the evening news. The tragedy of 911 was the story. The job of ham radio was to be the carrier of the message so that aid and comfort could be brought to the victims of this horrific and cowardly act of terrorism.

What 911 showed is that our loose knit fraternity can come together when the need arises. That we maybe called radio amateurs, but that we are communications professionals. That ham radio is there when it is needed.

On 911, ham radio did the job its people have trained themselves to do. The hobby has since moved on. So has our nation. But neither will ever be the same.

I’m Bill Pasternak, WA6ITF
--

We pray that a tragedy like 911 never happens again.

**

Several readers are curious why you posted the tale of using an ARC-5 in a WW2 jeep. Impossible unless there were three more 6 V batteries available (not mentioned).

>You need a trip to the mast for insubordination boy.

Neither the USAF nor the US Army have "captain's mast."

>Remind me sometime to tell you about how well yer buddy The Putz fared
>at the USN Johnsville labs just up the road from here.

This might be interesting considering there hasn't been any "Johnsville" US Navy facility in Warminster, PA, since before 1970. There was an NADC or Naval Air Development Center in Warminster during 1971, a subdivision of Naval Air Systems Command. Across the road was Warminster NAS, a one-runway airfield. Both had been the property of Brewster Aircraft Co., the only known aircraft company to go bankrupt during WW2. I was at NADC for about four months total in 1971, representing RCA Corporation as on-site field engineer during SECANT system tests there. SECANT was an aircraft anti-collision system and one part of NADC was evaluating that and Minneapolis-Honeywell's adaptation of a helicopter station-keeping system for collision avoidance. Operating frequency was 1.6 GHz. NADC had test management responsibility for both systems.

NAVSTAR was undergoing in-flight testing at the same time, managed by another laboratory within NADC. NAVSTAR later grew into GPSS. The NAVSTAR project shared the RA-2 with collision-avoidance group on airborne tests.

You are welcome to fabricate whatever you wish on what happened 31 years ago in one part of Pennsylvania...but please try to get the correct names for a military facility. For what it's worth, there was nothing to "charge" anyone with on either the government-

military or corporate side at that time. One day the NAVSTAR group accidentally unfolded the wings of the RA-2 on the ground, striking the shared ground service truck top, barely missing the blade antenna there for the 225-400 MHz truck radio. No real damage occurred but the NAVSTAR people were "talked to."

SECANT development continued at both RCA and NADC, including design of a third phase airborne unit of much smaller size using a number of innovative techniques (SAW or surface-acoustic wave bandpass filters at around 62 MHz having 1 MHz bandpass with brick-wall shaped skirt response). NADC lab engineers visited RCA EASD, Van Nuys, CA, in 1974 in preparation for third phase tests and data recorder interfaces between 60-bit word and 64-bit word computers for recorder data reduction.

The FAA independently chose the MIT-developed adaptation of existing ATC transponders for collision-avoidance over any other system; that system works only on air carrier aircraft and still leaves the majority of civil and military aircraft without any automatic, independent collision-avoidance capability. That decision obviated any further development of other collision-avoidance systems. Both Minneapolis-Honeywell and RCA Corporation projects were shut down and un-flight-tested third-phase equipments delivered to the government in 1975.

NADC vacated the Warminster location some years later and all then-existing projects transferred to NASC according to one civilian engineer at NADC who I worked with in 1971 (we had surface and e-mail correspondence up to 1999).

>Remind me sometime to tell you about how well yer buddy The Putz fared
>at the USN Johnsville labs just up the road from here.

So...what did ultralight wish to "tell?" Be specific, use proper dating and technical details.

Steve, I should have included a smiley.

Too bad about the shipboard op. Didn't he indicate he was on a boat?

Too bad he didn't get on a few resupply runs through Mog and do his ops from land. I recall the ship's Captain offering to bring us a warm dinner on Christmas, but Gen Johnston said we weren't there to eat hot meals. The rest of the marines were good people, though.

Strangely, no one has complained - except the vociferous ones on rrap who aren't even in my logs.

> > They're all over me if my membership is about to expire.

> As is every magazine or subscription that I have that's about to expire

I'll try to contact my OIC from over there and see what he knows of our commander.

> WHAT BRANCH OF THE ARMED FORCES WERE YOU IN?!?!?!
>
> BBBWWWWahahahahahahahahahahahahahahahahahahahahahaha!!!

The person must be a commander (no, not navy rank) to have command
authority. Every officer working for that commander is not a commander in
his/her own right. That's just the way it is.

Every branch of the service sees it that way. They're all enforced under
something called the Uniform code of Military Justice (UCMJ). If each
service were different in that respect, they would have to have a separate
UCMJ for each service. They don't.

> >They can give verbal orders, but the ARRL
> >blurb

You'd be silly to think that.

> That's gonna tick off a lot of flag rank officers in ALL branches!

Doesn't matter. Do you think every O7 running around the Pentagon is a
commander? Whoo-Boy!

> >But now that you've said it, it will be believed by all.
>
> Doesn't matter who siad it, Brian...If it's true, it's true, and if
it's
> not, well, Lennie probably said it.

You need to come to grips with what a commander is and what a commander is
not. I'll assume that as an enlisted man in the Marine Corps, you were so
far removed from any kind of officer that you probably never learned the
distinction. FWIW, the ratio of enlisted to officers in the USAF is much
lower than all of the other services. Its just more technical and requires

more degreed personnel.

>
> True, Jim, but how many of our bands do we share, and do so efficiently
>for all concerned?

Each shared band must be considered as a separate case. Look at the mess 7.2-7.3 has been since before WW2. Region 2 hams share that segment with Region 1 SWBC, and I'd hardly say it was efficient for US hams.

30 meters is shared, but we don't allow 'phone there and the power limit is lower than elsewhere.

> This need not be an "exclusive" allocation.

That's true, but the point remains that the current users may not like the idea of a bunch of new users showing up.
>
> There's no reason that can't happen here. Also, they operate on a few
>discreet channels, not the entire band. In as much as hams are NOT
>channelized
>on HF, a 200kHz loss there could be catestophic to us, but we'd adapt.

The channelized users might not agree.

And this is where the behavior of a few individual hams can have a profound effect on the ARS. Imagine that representatives of the NTIA, FCC, ARRL and any other interested folks sit down at a meeting to discuss the issue of interference. One of the NTIA folks pulls out a tape recorder and starts playing recordings made of various amateurs on 3950, 14313, etc. You want the job of convincing FEMA that hams won't behave that way on 5285 or wherever?
>
> And how about we lopp off 146-148...at least that way we'd be harmonious
>with the rest of the world!

As long as you volunteer to work out coordination of all the repeaters on 146-148...

I move a lot. I've used local ISPs and national ones. But never AOL.

Why are we talking about ISPs?

I don't care about who he is/was, just curious if he truncated the call or
if you did.

Did he just use t5/n3h, or the full t5/n3hxx?

Thanks, Steve. It still doesn't adress the situation of a piece of real estate w/o a government. Its not like the government suspended amatuer operations as above. Its more like the goverment suspended itself because individuals would not work together or warred with each other to the point that anarchy existed (much like this merry band of amateurs).

In none of the above DXCC rules did I find anything like the other ARRL page, stating: At this time to operate in Somolia you would need permission from the United Nations or your military commander.

Why would the ARRL publish the above, then omit that kind of situation in the DXCC rules?

Brian

I thought this was a fictitious example.

Your question was, "Is my QSO with him legal?"

Dave would say that as long as Dave is operating within his license
privelege, it doesn't matter who or what the other operator says or does.

So, in this fictitious example, are you authorized 29.660 FM?

That sounds an awful lot like Larry.

839. HELP: Pursing Prosecution Of Illegal & Unlawful Operators!!!!!!!!!!

Newsgroup: rec.radio.amateur.policy
Date: 2002-09-10 03:09:48 UTC
From: crt4239@aol.com
Message-ID: <20020909230948.19108.00002379@mb-fz.aol.com>
Source record: 52706

Could someone suggest a weblink on how to pursue Federal prosecution of illegal and unlawful operators? I'm in the Philadelphia are and have heard (on 2 meter frequecies) explicit sexual discussions on how to have sex with children, music broadcasts, singing, extremely crude language, and even CB radio (channel 19's audio) being transmitted on the 2 meter frequencies. All those I heard (about 10 individuals) appear to know each other and some are actually giving their licenses identifications. If I'm just wasting my time in seeking to bring these individuals to justice and clean up my local 2 meter frequencies, please be honest and let me know and I'll just sell my new 2 meter radio.

> But either way, it didn't matter to you, did it?

You're trying to read between lines again. I have no idea if the person posting here was French, a ham or if he/she had valid information on French licensing. I operated where *I was permitted to be*.

> You were going to work
> whoever came up out of band or not.

Now you're having the malarial hallucination. I've written no such thing. My point was, you weren't there and weren't involved. Those things did not stop your wild accusations and attempts at character assasination. Now that the shoe is on the other foot, you don't care to play anymore. Take your Somali permission and go home if you like. Whoops!--That's right, your dog ate it.

> > > Then you said you'd continue to

> sure about you.

You can't work me out of band either. I don't operate out of band.

Any luck on contacting your commander from those days in Somalia yet?
Have you found whether he had authority to issue permission for your
operation from there?

It'd be a lot easier if you could cite the legal reference for the
validity of your Somali operation.

Oh, he's here. He just isn't involved. Aside from being a non-ham,
non-DXer, non-DXCC holder, you're a regular expert.

> Thing of it is, Judge Heil tries snow jobs on others under the
> black masque of State Dept. "secrecy" to wow the amateurs

> in here.

Naw, Len, those comments were directed toward you. You aren't a radio amateur either "in here" or "out of here". As difficult as it may be for you to accept, there are things I can't tell you about my former job. Live with it.

> He once tried to say that CW was used as an order-
> wire on a State RTTY circuit...which is still dumb as hell
> considering the TTY itself provides the writing and can be in
> crypto mode on-line. :-) :-) :-)

:) ;-) :< Funny how it doesn't work at all sometimes. It's even funnier how the CW circuit would work fine even when the RTTY circuits printed garbage. It's even funnier when I think that all of this is simply misdirection to deflect shrapnel from Brian who is still flying through a flak storm.

Sorry State never saw fit to seek your advice on the order wire matter.

> Doesn't matter anymore. Judge MUST have captitulation.
>
> Yawn.

Feel free to buzz of if you're bored.

You believe that the tisket tasket thing was written only 60 years ago?
Better do an internet search. You can apply a little Andersonian cut
and paste and post enough material to make our eyes glaze over.

> >

Little Lennie can't accept reality so he makes up his own. Little
Lennie's tactics haven't changed much over the years so the reasons for
my dislike are often brought up through perusal of Lennie's recent
posts. Poor wittle Wennie.

> >
> >> Poor baby. Also a rather poor country (Guinea-Bisseau) where

>
> Poor baby. Identity crisis? You are mistaking yourself for others.

Poor wittle Wennie! He can't answer a question. Why did you not ask
this of Brian some time ago? Why have you never asked it of yourself?
>
> I asked you a long time ago about that 1980s state doctrine of
> using CW on an RTTY circuit...which you said (first) that you

I used the term "State doctrine"? I believe you're pulling my leg.
What does the above have to do with what you wrote earlier or with my
comments in response?

> You've waffled enough to open a new IHOP on that for years,
> hiding behind arrogant "don't have to supply anyone with
> classified information!"

Arrogant? Hell, Len, I signed papers agreeing to not divulging
classified information and stating that I understood the penalties. Is
that the kind of thing you'd violate? What does it have to do with my

comments on Brian? You're veering off course.

> You just can't take negative criticsm of any kind and try to
> bluff your way out when caught.

Funny you mention it. That's exactly the kind of thing I'd say to you.
Now, back to Brian...

> If that doesn't work, you go
> into control-freak mode...which is now evident. Overall is this
> marvelous layer of sociopathy.

Sort of like the way in which you take your frequent pot shots at the
ARRL or its employees who have posted here? What constitutes a
"marvelous" layer of sociopathy and how are you qualified to talk about
that any more than you are qualified to enter a discussion on DXing and
DXCC accreditation?

> >
> >> >His
> >> >lying down and accepting defeat isn't nearly as much fun as watching him

> charge him with anything.

Let me ask you, Len--how would you know that Brian Burke is right given
that you aren't a ham, aren't a DXer and aren't a DXCC holder? What
makes you an authority on who is an authority? Crawl back under your
dresser until the next full moon. Maybe they'll let you call a radio
talk show or something.

> Is this how you would handle newcomers to US ham radio?

Hot damn, Len! When did you obtain a license and become a newcomer?

> Acting like some idiot control freak imposing his will on them?

What instructions have I given you as a newcomer? Have you complied?

> >> Judge Heil has now expressed his "delight" in hitting on another.

>Could someone suggest a weblink on how to pursue Federal prosecution of
>illegal
>and unlawful operators?

It's real simple:

1) Tape-record the offending conversations. Cassettes are preferable. On the cassette lable, note the date, time, frequency, repeater(s) used if any, your approximate location and any other data.

2) Send to Riley Hollingsworth at the FCC with a short note.

3) If a repeater is used for the conversations, consider sending a copy of the tape to the repeater trustee.

For some legal reason, the FCC wants tapes, not just reports. So send them well-documented tapes.

>This might be interesting considering there hasn't been any
> "Johnsville" US Navy facility in Warminster, PA, since before
> 1970.

There's nothing unusual nor "interesting" about it, Your Putziness.
Despite the USN's designation of the facility, it has been known by the locals
as "Johnsville" ever since it was created. That area is STILL called
"Johnsville" and "the old base" by locals to this day. Much of the old
barracks was pressed into "Public Housing" in then late 60's and 70's.

>There was an NADC or Naval Air Development Center...(SNIP)

Yadda Yadda Yadda

You tried to "trip me up" on this crap 3 years ago. Nice historical
tidbits but none of it germane to Amateur Radio policy...AS USUAL.

>You are welcome to fabricate whatever you wish on what happened
> 31 years ago in one part of Pennsylvania...but please try to get
> the correct names for a military facility.

Speaking of "fabrications", Lennie, WHERE is the "evidence" of dishonesty
by the ARRL?

>NADC vacated the Warminster location some years later and
> all then-existing projects transferred to NASC according to one
> civilian engineer at NADC who I worked with in 1971 (we had
> surface and e-mail correspondence up to 1999)

I have had "surface and e mail correspondence" with some folks from
Johnsville since 1998, Lennie, and they weren't very complimentary. Seems you
have had a way of "impressing" folks even before the days of the Internet.

Why am I NOT surprised...?

>
>Are you going to place me under DXCC arrest or what?

Nope. Your ignorance of what constitutes a legitimate DXCC entity and what does not is your own "punishment", Brian.

>>His facts are wrong and he has no documentation of his "operation" in
>> Somalia, yet continues to insist it's "valid".
>
>Steve, lets just say that my facts are facts.

No, they are not...NOT for DXCC validity. I have already conceeded that you thought you were legal, and that you didn't suffer any repercussions from the Armed Forces for that act. Again, bully for you. But as far as DXCC validity goes, you FAILED to meet documentation criteria.

Did you REALLY work anyone, Brian? If you did, get a copy of your orders assigning you to Somalia. Then see if you can't locate your old OIC and get him to draft a letter stating that under the conditions that existed at the time, he was unable to document the "authorization".

MAYBE between the two the DXCC desk will acknowledge your operation as "valid". Otherwise, it's still INvalid.

>Cite the legal reference where my operation is invalid.

DXCC participation criteria. Have a look yourself.

Are you aware that O-7's are flag rank officers and 0-5's are not,
regardless of service?

>FWIW, the ratio of enlisted to officers in the USAF is much
>lower than all of the other services. Its just more technical and requires
>more degreed personnel.

"FWIW", in the Marine Corps, we had the lowest officer to enlisted ratio
because Marine enlisted personnel require far less adult supervision than the
other branches.

=)

>So, in this fictitious example, are you authorized 29.660 FM?

Never mind, Brian. Never mind.

The point is that a Novice CAN legally communicate on 10 meters, and in
the example I cited, 29.660mHz FM is a repeater output.

The answer would have been that as long as the Novice's TRANSMITTING
frequency was on a frequency allocated to him, it was legal. Many remote bases
cross-link and yes, this was legal.

I told you...think outside the box.

On what frequencies, and at what times
of the day are these transmissions taking place?
Are they Tx resident within Philadelphia City
proper or from the surrounding Counties or Suburbs?

Barry

You call ham radio "nonsense?"

You'd better stick to military radio.

Later, another RRAPer posted the French information and your French buddy
was incredibly accurate.

Good thing you didn't know he was French, a ham, or if he/she had valid
information on licensing. If you had known, you might not have been
following Good Amateur Practice.

Dave, obviously he had the authority. He was a commander. I'm trying to locate my OIC, who had been on the same station as my deployed commander. I was one of the cats and dogs that rounded out the initial deployment.

Look, Dave, you've all been wrong before, RE: Morse/Farnsworth. Nothing new
here. The validation that the switch to 13-15WPM Farnsworth is legal was
lack of prosecution.

Ditto my Somali operation. No prosecution, no illegal activity.

> > Cite the legal reference
> > where my operation is invalid.

I don't doubt my opeation was legal. Cite the reference that makes it
illegal.

I'M AWARE, I'M AWARE. They got all PO's if we didn't salute their stupid
staff cars.

Do you even know what a commander is?

You ever worked in HQ TRANSCOMM? HQ AMC? These places are overrun with 0-6
messenger boys, and 0-7's aren't commanders either.

Gen. Fogelman was the Commander of Both! He held the title Commander in
Charge of Military Airlift Command (CINCMAC). He was a real Commander and
he visited us in Somalia. He resigned under Clinton.

President Bush was the El Supremo Commander. He came to Somalia also.

"Scuse me President Bush, but I need your signature on this DXCC letter..."

I gotta go change my shorts. That one was way tooo funny.

Very little technical requirements. Lots and lots of marksmanship. Thank
God for Marines!!! The marines kept a lot of the random small arms fire out
of the former embassy compound. 10th Mountain took their time sweet showing
up and providing some defense. You wonder why I traded my S&W .38 for an
M16?

Nonsense! If a French ham who is supposed to know French regulations
breaks them, he is responsible for such behavior. Someone operating in
another country, thousands of miles away does not enforce French radio
regs.

Sure, Brian, and any old commander will do. According to you, the couple
of generic lines on Somali licensing are the bible on the subject.

This is a point that seems to be unrecognized by some. It is not the
US amateur, operating totally within the bounds of US law, that has
ANY obligation to know and/or understand the boundaries defined
by the laws of other countries regarding the operating limits
of hams in that other country.

If anyone can point to US law that sets requirements that
I know, acknowledge, or otherwise be concerned about
other countries amateur rules, please advise.

Cheers,
Bill K2UNK

It's hopeless, Bill. Brian is convinced he's right, in the face of all
evidence. Typical of him, obviously.

>

> What we hams are asking for is permission ot share 5.25 - 5.4 with other
> services who are currently there. We will do our best to avoid interference
> with those other services. NTIA isn't convinced.

Lotta "in's & outs" on this one the way I see it. Sharing works fine
on 30m. The only other services I've heard there are transmitting a
bunch of strong data signals which rule the lower few Khz of the band.
Those are easy to "avoid", they simply bully us hams out of their way
and they're probably QRM resistant too. Whatever they are.

I haven't seen any info on what kinds of signals we'd be interfering
with on 60m but if they're ssb sharing probably would not work
particularly in the case where the feds would be using low-powered
portable emergency equipment with lousy antennas. We have too many
lids with too many watts, big antenns and no ears for the feds to
compete with reliably. A three minute spin thru the 75 and 40m ham
phone bands illustrates the syndrome, he who pins the s-meter rules
the freq and tough darts if ya don't have a bigger signal. You can bet
that yer warmy "doing our best to avoid interference" is a writeoff
where the affected feds come from, they can tune the ham bands too and
they ain't into platitudes and "promises" from us to be good boys and
play nice when they pop up on some freq.

The ARRL did the interference testing drills before the events of
exactly a year ago when many feds could have arguably been asleep at
the switch and perhaps not particularly alert to the implications of
hams on their seldom-used 60m freqs. That's all obviously changed
dramatically. Right or wrong all federal agencies are hell-bent today
to identify and reinforce whatever assets they have which (they think)
will heighten their ability to serve their roles in national security.
Including their existing "clear channels" on 60m they perhaps didn't
much care about 366 days ago. Now they do care and here we is.

On the other hand there is probably more than just a bit of
overreaction on the part of the feds who use those freqs in the name
of national security. And otherwise including the USCG. We're seeing a
lot of that in other venues. It's my contention that the whole matter
needs to be revisted in it's entirety given the new realities. That's
gonna happen between the NTIA and the FCC and we ain't gonna have much
to say about it and it ain't gonna happen overnite.

These people are conceptually the same hammers who shut ham radio down compeletely for the durations of both world wars. We're engaged in another war today so let's not get too pissy and/or righteous about it until we learn more about the political and technical details we know nothing about yet.

<snip 75 & 2m discussion points>

>Steve, I never applied for DXCC from Somalia. Again, show where I was
>illegal.

Let's try to get some things through your head, Brian.

I already stated that I can accept that you thought your operation, if it ever did occur, was "authorized" on verbal OK of whomever it was said you could do it. That there was no legal proceedings does not mean it WAS legal, nor does it mean it was illegal.

For DXCC PURPOSES, your operation was INVALID since you did not have the proper DOCUMENTATION of your "operation"

Now, Brian...do you think you can manage to keep those two concepts seperate? I am giving you the benefit of the doubt on "legal"...But your status for DXCC PURPOSES was INVALID. THAT is a FACT.

Stew on that a while, OK?

73

>Very little technical requirements. Lots and lots of marksmanship.

You had better spend some time with your NG-buddy, Lennie the Limp, Brian, and get up to speed on some FACTS. (By the way, I am sure Lennie will instantly dive in with a lengthy obfuscation of how this assertion was false, but I suggest that those truly interested take a long look at Aviation Week and Space Technology archives. Even where the USMC was not the prime mover, they were the catalyst and prime contractors for development.)

The USMC was one of the prime movers for his sacred SINCGARS communications systems. The USMC, and specifcally Marine Aircraft Group 16 of MCAS(H) Tustin were involved in this program.

The USMC was the prime developer of VTOL technology in the Armed Forces and continues to be.

The USMC was the prime developer of V/STOL flight, specifically in the form of the Osprey.

And before President Bush gets on Air Force One, he's deliverd to Andrews AFB by Marine One.

Tactical use of NVG's for aircrews was pioneered by USMC helo crews.

>Thank God for Marines!!!

You got ONE right.

>The marines kept a lot of the random small arms fire out
>of the former embassy compound. 10th Mountain took their time sweet showing
>up and providing some defense. You wonder why I traded my S&W .38 for an
>M16?

No...I don't wonder at all. I just wonder what you did with it?

And do you know HOW it was that Marines kept that fire suppressed?

Im listening to FEMA trying to do their thing right now on a 5 mc frequency.
Guess what? Its being jammed by bootleg CB Trucker types.

Perhaps NTIA has a point. They may think the truckers are hams.

WHAT frequency, Dan...?!?!

>Perhaps NTIA has a point. They may think the truckers are hams.

Then it should be our job to educate them, and call in some of the chips
owed us to back up our assertions of ability to coexist.

From: tbryant@cannet.com
Message-ID: <alo83502sb9@enews3.newsguy.com>
Source record: 52653
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

After being in "lurk mode" for the past three or so years, I felt like posting today.

It's hard to believe that a year has passed. On that Tuesday, I had been working an afternoon shift, and I was awake early because of a doctor's appointment. I wanted to catch up on some reading, and I didn't have the TV on. My mother-in-law called shortly before 9:00am and asked if I was watching TV. She said that one of the WTC towers had been hit by an airplane. My first thought was a small, single-engine plane had flown off-course, until I saw the smoke. About a minute after I turned on the TV, the second plane hit the South tower.

At the doctor's office, people were quiet as they listened. Then came the announcement that the Pentagon had been hit. On the way home, I had the car radio tuned to Howard Stern's show. (He was ready to nuke Mecca right now, but all that would have done would be to temporarily make us feel good and piss off every Muslim around the world even more) It was about 10:45 that "Crazy Cabbie" called into the show to say that lower Manhattan was covered in smoke and dust, because the towers had collapsed.

For nearly two weeks after the initial attacts, I thought it was all a bad dream. That each day I would wake up and the New York skyline would be whole again. As time passed, I knew that it was not a dream.

I see that the *.policy newsgroup continues to bicker about the code and testing, and that the *.misc newsgroup continues with their petty insults. Today, however, I would think that the aguing could have been set aside.

>as much about the neigborhood as The Putz does.

When NADC was in operation in 1971 to 1974, all correspondence letterheads, AUTOVON and AUTODIN books, USN organization charts and other official literature of the US government had NADC at Warminster, PA, and the air facility as Warminster NAS. A big sign on one of the hangars, easily visible from the bisecting road between there and NADC, said Warminster.

"Johnsville" was NOT a "test center" (as you called it). If you want one of those, go to Patuxent River Test Center.

Ultralight is welcome to his post-partum depression but that's just the way it was.

Now why not go a bit down the turnpike and camp out at Valley Forge? Preferrably in January. Wear your three-corner hat and sissy leggings, be an army of one...

USAF GlobeCom Air/Ground channels. Kinda difficult to hard-wire
or fiber those circuits, and when the USAF charters commercial
aircraft as it did in Gulf War I, they don't have to supply
MilSatCom gear.

The Collins/Lemay/Goldwater/Godfrey Poker Game had some value.

Correct. When the FCC wants to authorize some operation not
provided for in the Rules for a single or small group of applicants,
it's much easier to issue an "experimental" license (does not require
public notice and comment and can be done by delegated authority) than
to change the Rules for that one applicant (requires Commission action
after public notice and comment and is a bear to change back if the
operation is not successful).

This is in addition to the "real" experimental licenses which are
designed to gather or prove technical stuff.

They lostenmed to the W6NUT repeater in L.A. for ten minutes....
>
>But how would we hams react if we were being asked to share a band or bands
>that are now exclusively amateur? Say, 3.6 to 3.8 MHz? Or 144-146 MHz?

The military routimely asks the FCC for - and receives - permission
to "share" 6 meters on an "non-interference" basios .... (sure.....)
The ham users aren't "asked" - there are FCC/NTIA agreements in
place for this.

Most of these signals come from a very fenced-in spook compound in
Warrenton, VA..... (as reported in PopComm).

Some day the Army CoE will pave over the grass outside the fence
which has been worn down ny legions of Spanish-number-group chasers.

>
> The USMC was one of the prime movers for his sacred SINCGARS
>communications systems. The USMC, and specifcally Marine Aircraft Group 16 of
>MCAS(H) Tustin were involved in this program.

No. SINgle Channel Ground-Air Radio System (SINCGARS) is an all-service concept, part of the beginning of the Digital Battlefield concept of the US Army.
It was made possible largely by the design groups at General Dynamics, Fort Lauderdale Division, and Nova Engineering. Harris Corporation is proposing a
next-generation radio system compatible with SINCGARS and has already been awarded a production contrat for similar radios by the UK armed forces.

SINCGARS is not a "sacred" system, just one that works very well for small-unit commincations in the field. It is entering its 14th operational year as a
common branch communications system.

Wide public disclosure of SINCGARS development and production contract was first made in the industry publication Defense Electronics, a free trade

magazine for qualified subscribers involved with DoD electronics. The year was 1987.

While Aviation Week and Space Technology is not an industry freebie, it seldom covers all-electronic projects such as land-forces radio systems in detail.

> The USMC was the prime developer of VTOL technology in the Armed Forces
>and continues to be.

No. USN, to distinguish "VTOL" (Vertical Take-Off and Landing) from pure helicopter type aircraft pioneered by the US Army in the 1940s.

The first true VTOL was a Convair experimental aircraft considered for shipboard use and was literally "hangared" by hook on a cable across the top of a flat platform, platform being raised to a near-vertical position. That was in the 1950s. Several VTOL aircraft have been made and tested (nearly all at Edwards Flight Test Center, CA) but the Osprey seems to be the end of the VTOL line.

The Hawker Harrier, an English design, pioneered a fighter aircraft designed to duct exhaust downward to achieve VTOL capability. It has been built under license to the USMC but was not designed expressly for the USMC. The USMC Harrier was operational by 1974 and remains in service.

> The USMC was the prime developer of V/STOL flight, specifically in the
>form of the Osprey.

The Osprey is essentially a one-of-a-kind hybrid of helicopter and fixed-wing aircraft. It has achieved what some consider as absolutely the longest flight test trial time of any aircraft anywhere in the world. It is still
plagued by technical problems. Stubbornness by both the USMC and developers have cost the US taxpayers an enormous amount of money for years without achieving a reliable aircraft.

The Harrier has shown its capabilities in the battlefield arena, achieving a modest success. It is an example of the opposite of NIH thinking, adapting another country's design for the US armed forces, a proven design that did not require years of development time and taxpayer money.

> And before President Bush gets on Air Force One, he's deliverd to
>Andrews AFB by Marine One.

Flag-waving. A special helicopter and crew squadron is organizational. The "presidential helicopter" is an adaptation of the USN Sea Stallion, already proved in operational use with USN.

Please let go of the incessant USMC E-6 Dill Sergeant speechifying.

Robeson has his medical release from the USMC. He is not, repeat NOT in the USMC now. The USMC did not want him any more.

All the carping and denigrations leveled at other service branch members will not insure Robeson's return to the USMC.

The recruiting poster and military aircraft history-tactics forums are way over in other newsgroups.

Given there were so few "commanders" in Brians version of the Air Force, one has to wonder exactly where he had to go to find a commander to ask. By the definitions in his posts on the subject of commanders, there obviously wasn't one close at hand.

You have to wonder how much of this story was written on the fly.

Yet another revealing point. His total documented authority for this operation was a oneliner on somebody's website that "permission of UN or military commander" with no further explanation nor definition. Huh.

All facts. But as shown in other posts here re bootleg truckers QRMing 5mc operations, FCC and
NTIA should already know that as far as their problems are concerned, the ARS is just a single
small flea on a very large dog that's loaded up with them. We still have the best self policing record of all, the few idiots amongst us notwithstanding.

TL, you really need to read closer. The only bitchin' about code these days is Brian "Slim" Burke who is evidently incensed that the FCC would stoop so low as to allow Farnsworth method of code testing, which is well and widely known to assist almost everyone in learning the code. Tho that's been the case for over a decade, he just found out a few months ago, and he hasn't worked through the anger yet. Poor fella.

FWIW, we used HF in Somalia to flight follow. Lots of Southern Air.

Bill, is it Good Amateur Parctice to work another amateur that you *know* is
operating outside of his/her authorization?

You can pull and Ed on me and refuse to answer the question.

Similarly, the US Army has a far higher ratio of enlisted men to officers.
Thats just the way it is.

Dave, why call names? We were both communicating with each other on RRAP back then, just as we are now. Ditto the incredibly accurate French ham who communicated directly to you the French 6M authorizations, and the very same one that you replied back to.

Again, its not the things you can't tell us, its the things you have told us.

Do you think I need validation from Bill Sohl? Suffice it to say that I can
read Part 97 without help from bill Sohl. And Part 97 specifically says
"Morse Code." What else could it mean?

> > Ditto my Somali operation. No prosecution, no illegal activity.
>
> How do you get a hat on that square noggin?

You guys seem to hang your hat on the lack of prosecution being proof that
the FCC agrees with the substitution of Farnsworth for the Part 97 stated
Morse Code exam.

Dick, unless you can find something else, the ARRL website will have to do.

Have you found anything else that disagrees with the ARRL website?

So you are also of the mind that the ARRL DXCC desk supercedes all other
licensing authority?

Steve, I realize that you feel yourself a benevolent Extra "giving" me the
benefit of your doubt, but...

But your
> status for DXCC PURPOSES was INVALID. THAT is a FACT.

But its not a FACT. The only way you could know that is if you held a DXCC
rejected QSL card.

My Korean operation may or may not be rejected. I've yet to be told of a
rejected QSL card.

My Portable KH2 operation may or may not be rejected. I've yet to be told
of a rejected QSL card.

I had gone with my wife that day to see her doctor. As we passed
DFW airport where there are always a number of plans landing and
taking off, there seemed to be an unusual number of plains lined
up on approach for landing. While we were in the doctor's office
it was announced that all airspace over the U.S. had been closed
and all planes ordered to land at the nearest available airport.
When we left the doctor's office I told my wife to look up in the
sky over the airport. She said, "What, I don't see anything." I
said, "exactly, there are no planes in the sky." It was really
spooky.

I pointed it at the khat chewing, AK carrying technical at the K4 traffic circle, amongst other things. Had he given me a letter of authorization to operate ham radio while in-country, Dave would say he gave permission under duress, thus illegal.

> And do you know HOW it was that Marines kept that fire suppressed?

Scope sighted bolt action rifles.

I know of no other ham anywhere clueless enough to even think of such a thing. On the other hand, almost all hams who have ever read enough to know anything about ham radio could tell you that DXCC licenses nothing and never did, but is a quite good predictor of whether or not any particular DX operation was or was not legal. And if they learn new information on one they have previously sanctioned which indicates it was not, they're almost certain to request validation of the station's authority. If it isn't supplied, they will act on their best information, and that would almost certainly lead to the revocation of DXCC credit for that station's DX activity. Which causes OTHER HAMS to lose, not the miscreant.

But you've already been told all this.

It just might mean that the FCC has decided to give
beginners a break and
allow a variant of Morse code known as Farnsworth Method,
widely well known to
cause the code learning process to be much easier, to be
allowed in testing so
that students may test under the method by which they
learned.
Will that simple straightforward concept ever penetrate the
granite between
your ears?

" Uh, Sir, I want to operate a ham radio here in good ol' Mogadishu. It OK with you?"
"Son, I don't give a $hit what you do, just keep outa my sight, and outa
hearing range, too"

Just one of an infinite number of forms Slim's "permission" might have taken. Valid to a fault. A one-liner on the ARRL's website says so.

Of course Slim is lying, he just doesn't know it, (Cecil's dictionary confirms it).

Phil Kane sure has. In the form of FCC regs that apply to ALL licensees.
There is one that says something on the order of "all licensees will operate
under and adhere to international law and rules". Which cover cases just such
as yours.
I'm not going to do the research on the FCC's voluminous web site to point it
out for you. Somewhere along the way you're going to have to learn to shift for
yourself.

>>The USMC was one of the prime movers for his sacred SINCGARS
>>communications systems. The USMC, and specifcally Marine Aircraft Group 16
>of
>>MCAS(H) Tustin were involved in this program.
>
> No. SINgle Channel Ground-Air Radio System (SINCGARS) is an all-service
> concept, part of the beginning of the Digital Battlefield concept of the
>US
>Army.

Yes. Please note I did NOT say "only", Lennie. The USMC was intergral to
this program. This is a fact.

LtCol Barney Oldfield, then DOSS of MAG-16 was the USMC airwing
coordinator for our specific parts of the field trials. Extensive opeartions
involving aircraft from MAG-16 and field units at MCB Camp Pendleton
participated in this program.

Care to know how >>I<< know, Lennie?

>SINCGARS is not a "sacred" system...(SNIP)

To YOU it is, Lennie. You keep harping back to it as if it MEANS something
in your constant blatherings in this AMATEUR RADIO newsgroup.

>> The USMC was the prime developer of VTOL technology in the Armed Forces
>>and continues to be.
>
> No. USN, to distinguish "VTOL" (Vertical Take-Off and Landing) from pure
> helicopter type aircraft pioneered by the US Army in the 1940s.

Again, you try to completely re-write the post based upon your hopes that
others missed that one word, "prime".

This does not exclude other agencies, Lennie, however it is public fact
that the United States Marine Corps is the ONLY branch with fixed wing VTOL
capability in the United States.

>The first true VTOL was a...(SNIP)

I didn't say "first", Lennie. Go back and re-read what I wrote, Your
Geezerness.

>The Hawker Harrier, an English design...

Actually it was the Kestrel. The name "Harrier" came later.

>It has been built
> under license to the USMC but was not designed expressly for the USMC.

No...the "Harrier" was not designed "expressly" for the USMC. However the USMC's investment of development funds and subsequent adaptations have made it the warfighter it is today. THAT is a fact.

Also well known to anyone with a passing interest in the Discovery WINGS cable channel is that the United States Marine Corps is the ONLY branch of the US Armed Forces with VTOL capability, and is the ONLY branch of the US Armed Forces to employ it in combat. I will add "fixed wing" to that in order to keep you from being able to obfuscate the facts behind the fact that helos may also be classified as "VTOL" aircraft.

>Stubbornness by both the USMC and
> developers have cost the US taxpayers an enormous amount of money
> for years without achieving a reliable aircraft.
>

The "stubborness" of the USMC has been to ENSURE that a viable aircraft results from this program.

We are not talking about creating a new technology aircraft for personal or sport applications. The demands of Naval Aviation are phenomenal, and designing an aircraft to meet the rigors of shipboard and over-the-horizon naval warfare are tremendous.

>> And before President Bush gets on Air Force One, he's deliverd to
>>Andrews AFB by Marine One.
>
> Flag-waving. A special helicopter and crew squadron is organizational.
> The "presidential helicopter" is an adaptation of the USN Sea Stallion,
> already proved in operational use with USN

Yes, it's flag waving, but it's true.

And no, Marine One is a Sikorsky >>VH-3 Sea King.<< The>>Sea Stallion<< is the older CH-53A and D series. The subsequent version is the CH53E Super Sea Stallion.

CH53's >are< attached to HMX-1 (Marine Helicopter Squadron One), however CH-53's are not presently in Presidential service, except as back-up or auxiliary service for cargo, matrial or press service.

The CH53 series is not regularly used for Presidential service due to it's gross weight and significant rotorwash...Can't have the Big Green Machine blowing over the Rose Garden, now can we.

>Please let go of the incessant USMC E-6 Dill Sergeant speechifying.

My last honorably held grade was E7, Lennie, and I never served as a DRILL instructor..

No speech, by the way...All facts that can be verified invarious public domain sources. Sorry it screwed up your King Of The NG Hill rants, Lennie.

>Robeson has his medical release from the USMC. He is not, repeat
>NOT in the USMC now. The USMC did not want him any more.

Which does not negate the fact that what I have presented here is factual, Lennie.

By the way, >>MY<< DD214 says "honorable", just like yours did.

>All the carping and denigrations leveled at other service branch
>members will not insure Robeson's return to the USMC.

And all your historical revelations about ADA of half a century ago will NOT bring you any closer to being right about Amateur Radio nor current application of technology in United States Marine Corps Aviation.

>The recruiting poster and military aircraft history-tactics forums are
> way over in other newsgroups.

Is that the same newsgroup that has "I was a rear area radio clerk so I should get a Ham Radio License without further adieu" rants?

Nice try, Lennie. Lame, but for you, nice....

>another war today so let's not get too pissy and/or righteous about it
>until we learn more about the political and technical details we know
>nothing about yet.
>
Worst thing we hams could do right now would be to push the FCC/NTIA to give us 60 meters as proposed originally. Just makes us look clueless - and worse.

Maybe, just maybe, we could get a small slice of 5.25-5.4 on the same basis as 30 m. No voice, low power, no contests, etc. But don't hold yer breath.

>Those that want to be VEs should be "qualified" as the
>ARRL does today.

Yup. Perhaps the best method would be a separate test element. But that complicates things.

--

We're not going to see much change in the rules until after WRC 2003. At which time, we hams should have some sort of proposal to adjust the license structure to a nocodetest situation. Included in said proposal should be stuff like the above. Otherwise, all FCC will do is drop Element 1.

That's beyond outrageous. Imagine the possibilities if FEMA was into
the real thing instead of a drill - or was it the real thing
somewhere? Interfering with hams is one level of criminality,
interfering with federal emeregency comms is an entirely different
level of criminal activity. Intentional disruption of gummint comms
infrastructure is a form of terrorism. If this doesn't result in some
serious enforcement operations against the jerks we might as well give
up even talking about the problem. The feds, FCC or somebody, the
Marines will do, oughta start swooping down on truck stops and
confiscating the radios, the trucks and the loads and ship a few dozen
of 'em off to Leavenworth for a hard 10 to 20. For simple possession.

>
> Perhaps NTIA has a point. They may think the truckers are hams.

The HF bands (outside ham bands) are alive with various illegal
and/or pirate type signals. As you observed, by monitoring communications
content, some are trucker types, others are personal, shrimpers,
long-liners,
unlicensed hobbyists, etc. Of particular interest, are the foreign
language
comms, especially Arabic, which is originating from within the U.S.
The FCC dumped virtually its entire pool of expertise in this area, post
1996. Fortunately, some of the best expertise was immediately
scooped up by other agencies.

Best 73,

Rob

I didn't assist them, Brian. They made a conscious decision to key a
radio where they aren't supposed to be. I couldn't make them do that
nor could I prevent it. I couldn't (nor was it my responsibility to)
enforce French regs from Tanzania.

Len's spat with me began way back and I don't recall you being around
then.
What I stated to Len was factual. That he denies it and goes into a
rant makes it no less factual. You wouldn't seem to have any
information on the subject one way or the other.

To answer your "why call names?" query, you act line Len's clone at
times.

I'd think you need validation of your idea from someone other than the
non-licensed, non-radio amateur Leonard H. Anderson. I'll agree that
you can probably read Part 97 without Bill Sohl's help. It doesn't
necessarily follow that you can understand what you've read.

Yep, Part 97 says "morse code". Farnsworth is not a separate coding
scheme. It is referred to as the "Farnsworth method".

> > > Ditto my Somali operation. No prosecution, no illegal activity.

> Morse Code exam.

No, I'm not "hanging my hat" on that at all. The FCC hasn't even told
anyone to stop using the Farnsworth method in testing. The FCC realizes
that Farnsworth is morse code. You seem to have trouble understanding
that. It is not the only means of testing for morse proficiency.
You've been told that. You seem to have problems digesting that too.

How many times must I tell you before it sinks in:

1) The DXCC desk (with advice from the DXAC) is the final arbiter on
what is accepted for DXCC credit.

2) (a separate issue) You have no proof of permission to operate from
Somalia at all *punto*

>

Good points, all well taken. But if ham radio is to be expected to help in disasters, as has been true all along, it is irresponsible for NTIA to categorically reject the 5mhz proposal without addressing the need for amateur spectrum in the 5mhz region. They could have just as easily left the door open a crack instead of just slamming it.

>
> Maybe, just maybe, we could get a small slice of 5.25-5.4 on the same basis as
> 30 m. No voice, low power, no contests, etc. But don't hold yer breath.

Exactly, and that would indeed serve the purpose, even adjusted up or down band to avoid any real problems. A data-only, restricted bandwidth and restricted power band would serve the purpose just fine, while enhancing our move toward later technology. Even 50 khz instead of the full 150 would be useful.

. But that wasn't what NTIA said, and it sure looks like someone currently assigned to that part of the spectrum who never uses it and pays little or no attention to it finally woke up and came out swinging.

If there's anyone out there in government still interested in ham radio as a viable communications asset -surely there is, given its history- it's time for them to act. Not just on this particular issue, but to create a realized separation from the radio outlaws who are in the process of taking over the spectrum. Ignoring them, while denying hams valid needs is a sure prescription for future disaster.

Billy Tauzin should be listening, but he's not.

So where's Riley in these nut cases? If there is any enforcement that is vital to the future of ham radio here it is. I would assume that someone could show some action on them, and forestall some of the criticism as the ubiquitous nuts found everywhere in our free and open society. Being a nut is no disqualification for anything. Just look at a couple denizens of rrap.

W5TIT is another story, sad that it is.

Yep. When I can hear anything through this powerline noise I like to monitor around. Quite a bit of 'strange' traffic going on. But can't make nothing of it of course. May be nothing at all.

I especially like to monitor the cw signals I hear from time to time in amongst it all.

5 mhz seems a popular part of the spectrum.

Come'on, guys, have you not been paying attention tot he items in the ARRL site (among others?)

There's been a bunch of enforcement actions against "W6NUT" participants. No, it's not off the air yet (which in my mind is the only TRUE remedy) but at least they are on notice that they are being watched.

"Barney Oldfield?!?" :-)

State the time and information reference of this SINCGARS "field testing."

This alleged testing statement, taken by itself, does not have any relevance without some reference that may be accessed by others.

> Care to know how >>I<< know, Lennie?

Bluff. The references to the SINCGARS has already been documented by at least three other US military service branches, in public statements by the prime manufacturer, General Dynamic, Fort Lauderdale Division, and ASIC (Application-Specific Integrated Circuit) developer, Nova Engineering. The system has been in operational use for 13 years in the US Army, USAF, and USMC for small-unit land and integrated land-air field communications.

>>SINCGARS is not a "sacred" system...(SNIP)
>
> To YOU it is, Lennie. You keep harping back to it as if it MEANS something
>in your constant blatherings in this AMATEUR RADIO newsgroup.

It is a clever system, innovative, combining a frequency-hopping
spread-spectrum option on a broad section of the EM spectrum
(over an octave, from 30 to 88 MHz), using digital modes for voice
and data. It even has a now-common feature of transmitter output
power adjustment (see several forms of amateur QRP units).

Many long-time amateurs have discounted or outright said that
digitized voice "cannot be used on HF (or even near there)" due to
"severe phase distortion from propagation making it impossible."
Actually, the ALE (Automatic Link Establishment) format and
doctrine has already blown that statement to bits.

Both FHSS (or even just DSSS) and ALE are both strange concepts
to many long-time radio amateurs. Those are stuck in the past of
narrow-band-only modes, cannot learn new concepts, and wish to
defend-to-the-death their ealier-gained knowledge.

FHSS promises relief from the overcrowded conditions on narrow
little HF band slices available for amateurs. However, it is shunned
as "foreign" and denigrated because the long-timer knows so little
about it, cannot admit ignorance.

ALE is already a standard on HF, essentially displacing the very
first SSB among commercial-military HF users of multiplexed voice
and TTY circuits. Note that ALE use is mentioned by the NTIA in
comments about the proposed US amateur band at 60 meters.
Long-time radio amateurs fail to mention the ALE protocol, most
not knowing what such an HF circuit sounds like, and instead go to
bashing nasty old government users from keeping amateurs out of
their "rightful desires." :-)

>>> The USMC was the prime developer of VTOL technology in the Armed Forces

>
> Again, you try to completely re-write the post based upon your hopes
>that others missed that one word, "prime".

Irrelevant. This newsgroup is about radio, not aviation.

The Osprey is the ONLY VTOL project STILL under development in
the US military. The Osprey is NOT YET operational. It is still in
an evaluation phase...millions and millions of tax dollars later, well
past the original testing completion date(s).

<snip>

> Also well known to anyone with a passing interest in the Discovery WINGS
>cable channel is that the United States Marine Corps is the ONLY branch of
>the US Armed Forces with VTOL capability, and is the ONLY branch of the US
>Armed Forces to employ it in combat.

"Combat" among officers at the Pentagon does not qualify as true
combat operations.

This newsgroup is not about US military aircraft nor the "superiority"
of the USMC to anyone else.

> The "stubborness" of the USMC has been to ENSURE that a viable aircraft
>results from this program.

The Osprey is so far over budget, so far past its original development
completion time (including contract extensions), that it is NOT YET
operational with any degree of reliability.

>>Please let go of the incessant USMC E-6 Dill Sergeant speechifying.
>
> My last honorably held grade was E7, Lennie, and I never served as a
>DRILL instructor..

I wrote "DILL sergeant." The type that struts in front of recruits,
campaign hat levelled, swagger stick under arm and continually
pursing lips in a scowl indicating sucking on too many dill pickles.

This is NOT the USMC, is NOT some recruit boot camp, and the
USMC doesn't want Robeson in the corpse anymore.

Try to live with the fact. You are having great difficulty adjusting to
civilian life.

> By the way, >>MY<< DD214 says "honorable", just like yours did.

My DD-214 is simply a release from active duty. Mine was issued
in 1956. Four years later, in 1960, I received a nice certificate
saying I was Honorably Discharged from US Army service after a
total of 8 years military service.

> And all your historical revelations about ADA of half a century ago will
>NOT bring you any closer to being right about Amateur Radio nor current
>application of technology in United States Marine Corps Aviation.

US Army radio station ADA operated on HF radio circuits, carrying
220 thousand messages a month across the Pacific from Korea to
California and down to Saigon, using [commercial] SSB and RTTY.
With 43 HF transmitters (by 1956) having RF power outputs of 1 to
40 KW, it operated 24 hours a day, 7 days a week, serving the Far
East Command Headquarters. In addition to HF, ADA used VHF,
UHF, and microwave radio relay sets to keep communications
flowing between Hq and the control, transmitter, and receiver sites.

None of the amateur radio activities in the USA have come anywhere
close to that kind of communications throughput nor reliability on HF,
yet some religious believers want to discount what happened a half
century ago just to win message points. Tsk, tsk, tsk.

This is not a military aviation newsgroup. Neither have I "claimed"
anything that long-ago military communications validates any

current knowledge of military aviation. Tsk, tsk, tsk.

Aviation Week and Space Technology is a popular, fee-required
periodical in the aerospace industry. When I subscribed to it, it
was a weekly, very informative. However, to use it as a general
reference is a poor choice. To properly reference it against a
claim in this newsgroup requires some identification of the edition
or at least the year.

To repeat, this is NOT a military aviation newsgroup.

> Is that the same newsgroup that has "I was a rear area radio clerk so I
>should get a Ham Radio License without further adieu" rants?

1. I was NEVER a "radio clerk." Proof may be supplied by
copies of mimeographed orders of the 8235th Army Unit.
E-mail attachments could be done of that but that would
mean the recipient becoming terribly enraged, enraged
enough to open another AOL home page full of vile, libelous
statements, and then having AOL delete it after notification.
That isn't worthwhile to all concerned. Instead, I can supply
surface mail copies, shipping postpaid, for the sum of $300
(US) for the package. Sorry, no group discounts. :-)

2. My temporary MOSs (Military Occupation Specialty or job
description) have been Fixed Station Radio Operations and
Maintenance, Radio Relay and Carrier Operations and
Maintenance. My permanent MOS was as Microwave Radio
Relay Operations and Maintenance and final MOS was 281.6
or Microwave Radio Relay Operations and Maintenance
Supervisor (so indicated on my DD-214).

3. I've never claimed that early, later, or even current radio
communications was any sort of substitute for any civilian
avocational radio license test (amateur radio license). My
advocacy in here was originally for the elimination of a
morse code test as a requirement for any radio license.

938. Re: ARRL Members -- protest this action to your director

Newsgroup: rec.radio.amateur.policy

Source record: 52754

In article <3D808FF5.55BA4731@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>Len's spat with me began way back and I don't recall you being around
>then.

1. Heil jumps into a "code use" thread and claims he devised a "neat"
order-wire [command] system whereby CW was used on an RTTY
radio circuit in Guinea-Bisseau for State Department...in the 1980s.

2. I reply with some Almanac facts about Guinea-Bisseau and state
that every other radio service using RTTY does NOT use "CW as an
order-wire [command] on an RTTY circuit" because it is foolish.

3. Heil claims that CW was "necessary" in order to provide
"synchronization" of the circuit.

4. I reply by stating that all TTYs are self-synchronizing, are designed
that way, citing a NAVSHIPS technical manual (public release) used
in USN teleprinter classes.

5. Heil waffles by now claiming it was "State Department procedure,"
something not done in the original claim. When requested to state
such a procedural document, Heil does not comply.

6. Meanwhile, Guinea-Bisseau's chief export is cashew nuts and even
the CIA World Fact Book, a public-release almanac of sorts, lists
Guinea-Bisseau as one of the poorest nations in the world.

7. Some time later, in another thread, Heil claims to have been "the
only ham in Guinea-Bisseau," presumably operating via reciprocal
licensing arrangements. No radio amateurs are listed for the
country of Guinea-Bisseau.

8. Even later, when the original "neat" idea of a "CW order-wire
[command] on an RTTY circuit" is brought up, Heil claims it is
now somehow classified and that the procedure "cannot be
revealed to those not cleared for it." One would presume this
is also for that most important export of Guinea-Bisseau, cashew
nuts, lest anyone else on the world market for cashew nuts try to
disrupt the export of Guinea-Bisseau.

>What I stated to Len was factual. That he denies it and goes into a
>rant makes it no less factual.

What Heil stated sounds suspiciously like back-peddaling
rationalization of a beginning slip of the keyboard, a refusal to
be corrected, certainly by a non-amateur.

Use of "CW for an order-wire [command] on an RTTY circuit" is foolish. Synchronization of TTY machines (mechanical or all solid-state) is automatic, inherent in their design. Typical single-channel RTTY circuits use FSK, can check their "spread" using either a fixed "Fox test" generator or a paper tape loop run through the p-tape reader of a teleprinter.

If encryption is used on-line for TTY, there are functions within the KY unit to handle encryption-synchronization. Those are classified.

Heil's claim of "synchronization" needed to "synchronize schedules, operating times, etc." falls apart when considering that a TTY already (in clear mode) prints out the same thing at each end, op time tables or listings sent faster and more accurately at typical 100 WPM rates than, at best, 20 to 40 WPM morse.

If the teleprinter unit on a circuit is working at all, there is no reasonable
reason to resort to manual OOK CW mode. That might be a reason if there is functional failure of the teleprinter, but that was never mentioned.

If the teleprinter unit is working, operating times, schedules can be transmitted encrypted to obscure intercepts by others. However, intercepts of single-channel RTTY circuits are commonplace and not difficult to do by even inexperienced monitors. Transmission of op times and schedules by morse has several difficulties:

A. If unencrypted, it is "in clear" to anyone with morse code cognition capability. Intercept is relatively easy and straightforward.

B. If encrypted, there must be a separate encryption system useable manually at each end of the circuit. This requires redundancy in crypto operating procedures, the manual method quite different from built-in teleprinter encryption keys ("keys" in reference to crytpo use, not as a morse key).

C. An in-between mode might use in-clear morse to send schedules but disguising or obscuring crypto key references to a pre-determined set already available at each circuit end. This is not generally preferred except as a "last resort" method since it makes known identifiers of key nomenclature which could be used in overall crypto analysis.

>You wouldn't seem to have any
>information on the subject one way or the other.

Bluff statement. Operating procedures for TTY and RTTY were worked out internationally before WW2, changed afterwards only to fit ever-growing multiplexing of many TTY channels on one radio circuits and various forms of crypto systems. The information is available in several texts and among the few who have operated RTTY in the commercial/military communications services.

RTTY use on HF of the "old style" is phasing out as more and more HF users change to faster "data" systems such as PACTOR or similar. Radio technology improvements now allow maritime radio services to communicate by voice and fast data modes on HF, so much so that specialized radio operators (with morse capability) are not needed on larger nation merchant ships.

>To answer your "why call names?" query, you act line Len's clone at
>times.

Calling names or the use of arrogant bluff phrases is "bad form" (to use an antiquated amateur radio term). Neither have any "answer" much less "reply" to another's comment.

Some alleged "superior professionals" in here have insisted that their examples are somehow "protected" by "government procedures" and therefore may not be criticized by anyone. That is ridiculous on the face of it by stating some 1980s "procedure" is either clever or latest-thing when such professional radio circuits had already stabilized their operating doctrine 30 years priot.

How do I know the other ham is operating outside of
the authorization of his country? I sure wouldn't
rely on the word of some other ham or the internet.
My "assumption" in the absence of any reason to believe
otherwise is that the "other" ham in the other
country is legal. I neither have the time nor inclination
to check the home country rules for every non-US
ham I work.
```

> You can pull and Ed on me and refuse to answer the question.

Why would I refuse to aanswer the question? See answer

Thanks.

>But if ham radio is to be expected to help in
>disasters, as has been true all along, it is irresponsible for NTIA to
>categorically reject the 5mhz proposal without addressing the need for
>amateur spectrum in the 5mhz region.

I'm going to play Devil's Advocate here for a bit.

Consider the following:

1) We US hams have 500 kHz on 80/75 and 300 kHz on 40 meters. Plus lots of
other bands. Except for SWBC on 40 we pretty much have those bands to
ourselves. Do we really NEED 60 meters to provide emergency comms? How have
hams done it all these decades, without 60 meter access?

2) US hams have 800 kHz between 3 and 8 MHz - that's 16% of that piece of
spectrum. How many kHz do FEMA et al have between 3 and 8 MHz? H

3) Maybe FEMA doesn't want our help that much. Maybe they think it doesn't look
good when a bunch of volunteers handle the comms on an ad-hoc basis.

4) The existing users there may be channelized, and unable to avoid
interference the way hams can. Heck, if things get rough on SSB, many hams can
switch to CW. Other services can't. (That scenario is not far fetched, either.
Ask KT4ST.)

5) If the legal users there are experiencing interference now, they can quite
logically conclude that it will only et worse if more folks are allowed access.

>They could have just as easily left the door open a
>crack instead of just slamming it.

Political negotiation, Dick. Somebody asks for something, the first answer is
NO. The request gets toned down, the answer is no. The request is toned down

even more, the answer is maybe. Etc. You've been there.

>> Maybe, just maybe, we could get a small slice of 5.25-5.4 on the same basis
>>as
>> 30 m. No voice, low power, no contests, etc. But don't hold yer breath.
>
> Exactly, and that would indeed serve the purpose, even adjusted up or down
>band to avoid any real problems. A data-only, restricted bandwidth and
>restricted power
>band would serve the purpose just fine, while enhancing our move toward later
>technology. Even 50 khz instead of the full 150 would be useful.

All part of the negotiation process.
>
>But that wasn't what NTIA said, and it sure looks like someone currently
>assigned
>to that part of the spectrum who never uses it and pays little or no
>attention to
>it finally woke up and came out swinging.

I think W3RV has the scenario down cold. 60 meters wasn't of much interest on
9/10/01. That's ancient history now.
>
> If there's anyone out there in government still interested in ham radio as
>a viable communications asset -surely there is, given its history- it's time
>for them
>to act. Not just on this particular issue, but to create a realized
>separation from
>the radio outlaws who are in the process of taking over the spectrum.

All it takes is some enforcement. Wanna bet that there is enforcement going on
that we never hear about?

>Ignoring
>them, while denying hams valid needs is a sure prescription for future
>disaster.

See the numbered points above.

If there's one thing we hams CAN do, it's clean our own house.

Dick, as a Conditional General, you weren't confined to the Novice CW Subbands and thus had no excuse for not working lots of CW at the higher speeds required for the examinations in place at that time. Having to practice for something that you demand everyone else be proficient shows what an elitist you really are.

He was issued a German callsign. But we've know fakes who were issued
Hawaiian and Guam callsigns.

That would be a real tough one with that knee key.

TL, I read your post yesterday. Do you feel better that I didn't reply yesterday?

What have we learned in a year?

We have a new "Homeland Security" that developed a color chart, and sent us to "orange" yesterday morning.

Whatever happened to Civil Defense?

Do you know where your closest shelter is?

It took us almost 9 months to get Sky Marshalls in the air. A bunch of them just quit.

A woman was made to drink breast milk, her own, for national security.

Have you taken your firearm to the range and practiced?

Have you cleaned that firearm?

Is your CPR card current?

Do you have a current HAZMAT placard identification booklet, state and county map, and phone book with your grab and go HT kit?

What was the last free FEMA emergency manangers course did you complete?

Have you registered to vote?

Do you plan to vote for freedom?

Larry, why would you want some chip or other electronic device to complete
and regulate your dits and dahs?

In an emergency, you might not be able to build one from an old toaster, a
Navaid, or ship's RADAR.

I think SGC needs to kick the power up a little, and the little FT817 could have pushed up the HF to 50w, and the VHF+ to 25w. As much fun as QRP is purported to be, these rigs are often purchased with emergency communications in mind.

> ourselves. Do we really NEED 60 meters to provide emergency comms?

YES! When propagation tanks on 40, and storm static makes 75/80 useless, a chance to use the 5 mhz region can make the difference. There was a good reason why the old Interstate Police Radiotelegraph Net used 5140 and 5710. The same reason ARRL gave when requesting the 5mhz allocation. There are times when it holds the only available HF propagation solution.

> How have
> hams done it all these decades, without 60 meter access?

How can we know how many times it was needed but not available?

>
>
> 2) US hams have 800 kHz between 3 and 8 MHz - that's 16% of that piece of
> spectrum. How many kHz do FEMA et al have between 3 and 8 MHz? H
>

As I see it that's a non-issue. They can have all they need, through assignment by NTIA and FCC. . AND share a small part of that spectrum with hams for common purposes. For ham radio is basically justified by its emergency communications value. More so today than ever, with other former justifications on the wane.

>
> 3) Maybe FEMA doesn't want our help that much. Maybe they think it doesn't look
> good when a bunch of volunteers handle the comms on an ad-hoc basis.
>

Professionally I worked closely with FEMA and SEMA (state level) for over a dozen years, and not once did I ever encounter that attitude toward hams, in fact very much to the contrary. Knowledgable FEMA communicators know that when the chips are down the most help they can get can easily be too little. I won't speak for the Left Coast and some other places where they like to tax to the max to fund much of such seldom used services, but taxpayer overload may change some attitudes there, too.

>
> 4) The existing users there may be channelized, and unable to avoid

>

Another one of ham radio's strengths, and reason for hams to learn Morse code to
useful skill.

>
> 5) If the legal users there are experiencing interference now, they can quite
> logically conclude that it will only et worse if more folks are allowed access.
>

But if the interference is from unlicensed outlaws who are getting a pass from
enforcers for whatever reason, but are thought to be "hams" who want to get legal
by asking for allocations in that part of the spectrum, whose fault is that?

>

>
> I think W3RV has the scenario down cold. 60 meters wasn't of much interest on
> 9/10/01. That's ancient history now.

That's the overall scenerio nowdays. FBI and CIA et all are catching heat for dropping the ball when they didn't figure out the puzzle in advance of 09/11/01 even though they had enough pieces in hand, in that ocean of information, communications and other data they deal with daily. It's doubtful from my viewpoint that will be corrected very soon or very much if at all, strictly because of the volume.When they get new things to watch for, the terrorists will do another chameleon change and slip through again. Whoever expected a boxcutter to be used as a primary weapon? They're not out of tricks.
All assets should be enhanced, not turned away or ignored. Including ham radio in emergency comms.

>
> >

>

Surely you don't think they're hiding any of it? I thought the FCC enforcement log covered all of it.
Problem today is that the dollar drives the FCC, and it's not their fault, it's their mandate, what they've been handed.

> If there's one thing we hams CAN do, it's clean our own house.

Yours and mine are in good shape, along with the vast majority of other hams. It grates that we can be held accountable for the outlaws, licensed hams and otherwise, upon whom no one can seem to get a grip because of politics and PC.

Dick

> 1. Heil jumps into a "code use" thread and claims he devised a "neat"
> order-wire [command] system whereby CW was used on an RTTY
> radio circuit in Guinea-Bisseau for State Department...in the 1980s.

Nope. Heil has corrected you each time you have tried to say that I
"devised" the system in use. I've challenged you to prove your
statement. You have not.

> 2. I reply with some Almanac facts about Guinea-Bisseau and state
> that every other radio service using RTTY does NOT use "CW as an
> order-wire [command] on an RTTY circuit" because it is foolish.

Nope. There is no official government record anywhere which states that
use of CW as an order wire is "foolish".

> 3. Heil claims that CW was "necessary" in order to provide
> "synchronization" of the circuit.

Nope. Heil wrote of the fact that propagation sometimes prevents crypto
sync and that even circuits run in the clear can print gibberish in the
presence of severe multipath distortion. CW works fine under such
conditions. Operators can easily deal with the "echo" effect of
multipath.

> 4. I reply by stating that all TTYs are self-synchronizing, are designed
> that way, citing a NAVSHIPS technical manual (public release) used
> in USN teleprinter classes.

Irrelevant.

> 5. Heil waffles by now claiming it was "State Department procedure,"
> something not done in the original claim. When requested to state
> such a procedural document, Heil does not comply.

Heil suggested that you contact State. Maybe they'll provide you the
information. I doubt it.

> 6. Meanwhile, Guinea-Bisseau's chief export is cashew nuts and even
> the CIA World Fact Book, a public-release almanac of sorts, lists

> Guinea-Bisseau as one of the poorest nations in the world.

Irrelevant. What has that to do with anything under discussion? The Department of State does not establish embassies based upon a nation's wealth.

> 7. Some time later, in another thread, Heil claims to have been "the
> only ham in Guinea-Bisseau," presumably operating via reciprocal
> licensing arrangements. No radio amateurs are listed for the
> country of Guinea-Bisseau.

Wrongo, Leonardo! Heil was the only ham in Guinea-Bissau for *most* of his tour. There are *no* reciprocal agreements in existence between Guinea-Bissau and the United States. Your last sentence is a masterpiece. I've already told you that.

> 8. Even later, when the original "neat" idea of a "CW order-wire
> [command] on an RTTY circuit" is brought up, Heil claims it is
> now somehow classified and that the procedure "cannot be
> revealed to those not cleared for it." One would presume this
> is also for that most important export of Guinea-Bisseau, cashew
> nuts, lest anyone else on the world market for cashew nuts try to
> disrupt the export of Guinea-Bisseau.

Large portions of my work are classified. Ditto information on circuits and equipment. State does not allocate comm center equipment based upon the wealth of the host country. There are and were special circumstances for a great number of embassies in African nations requiring some different equipment and techniques for communications centers. State does not feel it necessary (nor does Heil) to justify or explain communications procedures to Leonard H. Anderson (no matter how badly he wants to know).

> >What I stated to Len was factual. That he denies it and goes into a
> >rant makes it no less factual.
>
> What Heil stated sounds suspiciously like back-peddaling
> rationalization of a beginning slip of the keyboard, a refusal to
> be corrected, certainly by a non-amateur.

Heil was not writing of amateur radio. Heil was responding to a statement that government wasn't using CW. The statement was made to a non-amateur who has little knowledge of State Department communications operations.

> Use of "CW for an order-wire [command] on an RTTY circuit" is
> foolish. Synchronization of TTY machines (mechanical or all
> solid-state) is automatic, inherent in their design. Typical single-
> channel RTTY circuits use FSK, can check their "spread" using
> either a fixed "Fox test" generator or a paper tape loop run through
> the p-tape reader of a teleprinter.

It seems foolish to you because you don't understand it. You seem foolish to me. Perhaps you can do a better job of making yourself understood.

> If encryption is used on-line for TTY, there are functions within the
> KY unit to handle encryption-synchronization. Those are classified.

Encryption is used. "KY" units are not. The crypto devices are classified. Their operation is classified.

> Heil's claim of "synchronization" needed to "synchronize schedules,
> operating times, etc." falls apart when considering that a TTY already
> (in clear mode) prints out the same thing at each end, op time tables
> or listings sent faster and more accurately at typical 100 WPM rates
> than, at best, 20 to 40 WPM morse.

Under conditions of multipath distortion (almost nightly in the equatorial regions of Africa), a teleprinter operating in the clear can and usually does, print garbage. 20 WPM morse works just fine. No tables or listings are sent.
Notification of closure is sent with the next day's crypto segment number and the opening time. Is any of this getting too hard to understand?

> If the teleprinter unit on a circuit is working at all, there is no
> reasonable
> reason to resort to manual OOK CW mode. That might be a reason if
> there is functional failure of the teleprinter, but that was never
> mentioned.

We've already been here. There was no functional failure of the teleprinter. There is redundance in teleprinters and all other equipment. Yet the TTY circuit is not functional due entirely to Mother Nature. CW worked day after day after day. That it eats at you is something you need to deal with.

> If the teleprinter unit is working, operating times, schedules can be
> transmitted encrypted to obscure intercepts by others. However,
> intercepts of single-channel RTTY circuits are commonplace and not
> difficult to do by even inexperienced monitors. Transmission of op times
> and schedules by morse has several difficulties:

Yep, and if the typical onset of multipath distortion begins, as it typically did with sunset, a TTY closure with all required ZIC/ZID, crypto segment information, time of opening and frequencies to be used by each station simply cannot be sent. That you haven't experienced it and that you don't understand is of absolutely no consequence. It took place with or without your knowledge or consent.

> A. If unencrypted, it is "in clear" to anyone with morse code cognition
> capability. Intercept is relatively easy and straightforward.

See material above.

> B. If encrypted, there must be a separate encryption system useable
> manually at each end of the circuit. This requires redundancy in
> crypto operating procedures, the manual method quite different
> from built-in teleprinter encryption keys ("keys" in reference to
> crytpo use, not as a morse key).

See material above.

> generally preferred except as a "last resort" method since it makes
> known identifiers of key nomenclature which could be used in
> overall crypto analysis.

Keying material short titles and registry numbers were never used.
Segment numbers only were confirmed. Anyone trying to break the stuff
could analyze their asses off to no avail.

> >You wouldn't seem to have any

> have operated RTTY in the commercial/military communications
> services.

The late 1980's was not the period prior to WWII. I wasn't
communicating "internationally" TUs and link enhancement made for HF
speeds in excess of any you've encountered in your limited experience.
Procedures in use by State are not cleared by commerical operations nor
by the military. ACP-127 format is as close as State gets to the
military and ACP-127 is going away soon.

> RTTY use on HF of the "old style" is phasing out as more and

> nation merchant ships.

State is no longer using any HF except for Emergency and Evacuation SSB
nets.

You conveniently forget that you are among those you call names most frequently. That makes your reply doubly laughable.

> Some alleged "superior professionals" in here have insisted that
> their examples are somehow "protected" by "government
> procedures" and therefore may not be criticized by anyone. That

> circuits had already stabilized their operating doctrine 30 years
> priot.

I ran a "professional radio circuit" in a number of places, Len for a great many more years than the length of your historic military service. You would seem to be the odd man out since you didn't have any idea that such a thing was taking place nor did you even understand the logic behind it. It's obvious that you still don't understand it.

Now back to something else you don't really understand--amateur radio.

I'm just an innocent bystander taking flak.

> > Any old commander? What is that?
>
> I guess it'd be any officer in your chain of command.

You need to address that remark to Steve. I know what a commander is, and I know what a commander isn't.

> permission.

No. He was one of the regular 21st Air Force at McGuire.

I was merely an HQ Air Mobility Command "action officer." After putting together 6 weather teams for the Somalia circuit, I failed to locate one more weather SNCO. I was going to shortfall the tasking to Air Combat Command. My local OIC had another idea. After lunch the day prior to the deployment, he told me that I had joined the Cherokee Nation. I left for McGuire early the next afternoon. Departed for Ramstein with the rest of the teams. As the Marines secured the Mog airfield (see CNN flashbulbs), we got held up at Cairo West because the tactical runway lights wouldn't light. Briefed the commander enroute on wx conditions and climatology. We made a dawn landing. Sometimes it sucks to be me.

> Somebody must have it.

I did. But you already knew that.

You're something else. How is 13-15wpm Farnsworth a break over 5wpm Morse?

I've explained to you that Morse is a very specific dot/dash/space ratio.
It is Morse that is a variation of the infinitely variable Farnsworth Code.

They called me. I was sitting there operating where I was permitted to
be.
That's how I know that. I can explain the whole concept to you one day
when I have a lot more time.

> > I couldn't make them do that

Uh huh. Good Amateur Practice as you currently understand it. That's
one good thing about experience and the passage of time. You begin to
understand the meaning of some concepts of which you were previously
ignorant--if you're lucky.

> > > I only know what you told me and what the incredibly accurate French ham

Ignoring you doesn't seem to be an option. You're like a pesky
mosquito. Surely the thought has crossed your mind, "Hey--I'm the only
one here who holds this particular view. Maybe I'm wrong."

I don't. I can read Part 97 without help from Len, Dick, Kelly, Steve,
Larry, Ed, or you, Dave.

(Len, sorry to have lumped you in with that group)

I'll agree that
> you can probably read Part 97 without Bill Sohl's help. It doesn't
> necessarily follow that you can understand what you've read.

Does the FCC try to confuse the issue with your wording?

> Yep, Part 97 says "morse code".

Extremely Obvious.

> Farnsworth is not a separate coding
> scheme. It is referred to as the "Farnsworth method".

Farnsworth is an infinitely variable dot/dash/space timing in which "Morse"
occurs exactly ONCE, and ONCE ONLY.

Thus, Morse is the separate coding schema within an infinite set of schema
called Farnsworth. If the FCC wanted Farnsworth, they would have said
Farnsworth.

But they did not. They said MORSE.

Only because I read Part 97, and I understand how Morse and Farnsworth
relate to each other.

> > > > > > Cite the legal reference

So now you're proud of the French bootleggers you've worked and QSL'd?

Yet you called them scofflaws. You must now agree that you worked them out
of their authorizations.

Are you trying to tell me that Dave, as a USA and Tanzanian amateur radio
licensee fell under USA regulations while operating in Tanzania?

972. Re: Where were you?

I was at work. I am an on-line customer service rep for a major telecom company. Our call center handles calls from 18 states. I sit for an 8-hour shift, plugged into an ACD (Automatic Call Distributor) taking one call after another -- I handle 40-60 calls per day.

The TV was on in our break room. I keep an FM radio tuned to the local classical music NPR station. Shortly after 0900, the TV went to news as did NPR and we all became aware of what was going on.

The thing that struck me most about what I was doing was that the phones stopped ringing -- we did not take a single call until late in the afternoon -- not one.

--

Regards,
Joe S.

Just remember that you said this because you sound like you're back and
forth on this issue.

Doesn't the ARRL own the DXCC? If one complied with what the ARRL published
on foreign operating, why wouldn't the DXCC desk accept it?

Dave, if the DXCC is an ARRL entity, why wouldn't the DXCC desk accept
something in compliance with the ARRL published foreign operating guide?

Dick, you've kind of worn out the "clue" thing. What's the next insult in
your black bag of tricks?

Which simpleton thinks it was a whim?

It took courage to stay and face your insults, Dick's insults, Kelly's insults, Jim's insults, Steve's insults, Larry's insults, and especially Ed's insults. I thought more of Ed than the rest of you combined.

So now where's your partner in slander crime?

"...that which does not kill me..."

made me stronger.

You lose.

Bill, this is the same sort of non-answer that Ed gave. You're thinking too hard. You know a ham is operating out of band. Do you contact him or don't you?

Should be a no-brainer.

> > You can pull and Ed on me and refuse to answer the question.
